### **Avecho begins observational study testing enhanced cannabidiol formulation**

#### **Highlights:**

- Avecho initiates the clinical testing phase of its oral CBD TPM<sup>®</sup> formulation.
- Avecho joins Australia's largest running observational study of medicinal cannabis products, the CA Clinics Observational Study (CACOS).
- Participation in the trial will shape the future development of Avecho's oral cannabinoid product; providing real world customer feedback; prioritising indications of value for Phase II studies; and to explore the potential for SAS-B prescribing of a differentiated product.

**Melbourne, Australia, 23 December 2020:** Avecho Biotechnology Limited (ASX:AVE, "Avecho", or "the Company") today announced it has begun participation in Australia's largest running observational study of medicinal cannabis products, the CA Clinics Observational Study (CACOS). Avecho will test the performance of its enhanced oral cannabidiol (CBD) TPM<sup>®</sup> formulation in human patients being prescribed medicinal cannabis for a range of indications.

Avecho's oral CBD TPM<sup>®</sup> formulation has been shown to increase the oral bioavailability of CBD in animal models and will be tested for the first time in humans in the CACOS study. The Company aims to gather real world feedback on how the product performs in patients currently utilising medicinal cannabis therapy across a range of indications. Performance will be compared against commonly prescribed CBD formulations. Recruitment for the study will begin immediately, and continue on an ongoing basis throughout 2021 to maximize the number of patients dosed with both the CBD TPM<sup>®</sup> and commercial comparator formulations.

The CACOS study aims to recruit a total of 3000 patients nationwide through a network of medicinal cannabis prescribing clinics and will utilise questionnaires to examine the side effects, dosage response, and treatment satisfaction of medicinal cannabis formulations on patients' health status. Data generated will help shape the future development and clinical indications for the Company's pharmaceutical CBD products, whilst also exploring the potential for SAS-B prescribing.

*"The Avecho team is excited and optimistic about our plan to develop CBD products enhanced by our TPM<sup>®</sup> technology. This trial is an important step in gathering real world evidence from patients. Entering into an existing trial framework provides Avecho with both cost and speed advantages. The observational trial design allows the product to be used in a range of indications, which may prioritise specific indications for further development, or eliminate indications where the treatment is less effective,"* said Avecho CEO, Dr Paul Gavin.

Increasing the absorption of cannabinoids will allow for differentiated cannabinoid products on market, with greater therapeutic potential and/or reduced cost to patients, which is timely given the changing regulatory landscape for these products in Australia.

Earlier this month, the TGA made its down-scheduling of CBD official. In the future, registered CBD products with a maximum dose of 150 mg/day may be available to purchase directly from a pharmacist without a prescription.

"The down-scheduling of CBD is fantastic news for patients, but a 150mg dose is on the limits of efficacy for a range of indications. We believe increased bioavailability will be a key value driver that will positively differentiate our products in this growing competitive market," said Dr Gavin.

The CACOS study forms the companion piece to a Phase I clinical trial currently scheduled to begin toward the end of Q1 2021. The Phase I trial will assess the absorption of CBD from the Avecho product. Together, the data from these studies will direct the pharmaceutical CBD TPM<sup>®</sup> formulation towards the most appropriate clinical indications for product registration.

**About Avecho**

Avecho Biotechnology Limited (ASX: AVE) develops and commercialises innovative Human and Animal Health products using its proprietary drug delivery system called TPM<sup>®</sup> (Tocopherol Phosphate Mixture). TPM<sup>®</sup> is derived from Vitamin E using unique, proprietary and patented processes and is proven to enhance the solubility and oral, dermal and transdermal absorption of drugs and nutrients.

Avecho's major projects include delivering TPM<sup>®</sup> enhanced injectable, oral and topical products for the human health market, including the recently announced application of TPM<sup>®</sup> to cannabinoids. The Company is also developing TPM<sup>®</sup> to enhance feed efficiency and health of livestock.
