

Appointment of Chief Information Officer

18 February 2021

4DMedical Limited (ASX:4DX, "4DMedical" or the "Company"), a medical technology company focused on commercialising its patented respiratory imaging platform, is pleased to announce the appointment of Mr Craige Pendleton-Browne to the role of Chief Information Officer (CIO).

Mr Pendleton-Browne is a qualified executive that brings over 25 years' experience in the information technology industry, having held senior leadership roles in operations, technology and product development. He has extensive expertise working in the UK and Australia with such companies as iCareHealth (now Telstra Health), ASX-listed OFC Group, and News International and News Digital Media (both subsidiaries of News Corporation).

Most recently, Mr Pendleton-Browne worked in London as CIO of one of Europe and the UK's leading online doctor services Zava and Chief Technology Officer at money transfer and forex provider WorldFirst.

Passionate about technology, product development and user experience, Mr Pendleton-Browne is responsible for leading 4DMedical's Information Technology department and will oversee business transforming technology-based products and projects, in particular the Company's SaaS platform.

Commenting on the appointment, 4DMedical Managing Director and CEO, Andreas Fouras, said: "We are absolutely thrilled to welcome someone of Craige's calibre to our executive leadership team. Craige is joining 4DMedical at an exciting time and we believe he can add significant value to the Company's future growth and technology development."

As part of his appointment, Mr Pendleton-Browne will be based in 4DMedical's Melbourne headquarters following his relocation from London.

ENDS

About 4DMedical:

Based in Melbourne, Australia and Los Angeles, USA, 4DMedical (formerly 4Dx) was founded in 2012 and is listed on the Australian Securities Exchange (ASX: 4DX).

4DMedical is a medical technology company aiming to deliver the global gold standard in respiratory diagnostics for all lung disorders including: coronavirus, asthma, chronic obstructive pulmonary disease (COPD), cystic fibrosis and cancer.

The unique 4DMedical technology accurately and quickly scans lung function as the patient breathes, to assist in providing sensitive, early diagnosis, and to monitor changes over time. Our Software-as-a-Service

(SaaS) scans deliver much more complete results, showing even subtle variations in lung function down to the finest details, using lower levels of radiation than traditional methods.

Respiratory diagnosis is a US\$31 billion per annum global industry. Through its technology 4DMedical provides clinicians with greater insights into diseases of the lung. 4DMedical is focused on providing better information to doctors and patients about lung function. Better information means better decisions, and better outcomes.
