About Control Bionics:

Control Bionics is a technology company which enables a disabled person to use their own neuroelectric signals, from their brain to a muscle, to control communication and movement through smartphones, tablets, computers and robotics, even when that muscle is not fully functional. The Company's wireless wearable device, 'NeuroNode', is a world leader in electromyography (EMG), capturing and processing those neuroelectric signals into electronic commands to do everything they would normally do with a keyboard, mouse, joystick or touchscreen. The technology also enables a person to use their eyes to replace a mouse in controlling a cursor on a screen simply by looking where they want the cursor to move; and then to select anything under the cursor, using NeuroNode; providing fast, intuitive communication and control through text, text-to-speech, emails, phone-messaging, web surfing and robotics.
