The cost of equity-settled transactions is measured at fair value on their respective grant dates. Where market vesting conditions apply, fair value has been determined using a Monte Carlo simulation model. The cost of equity-settled transactions is recognised as an expense with a corresponding increase in equity over the vesting period. The cumulative charge to the profit or loss is calculated based on the grant date fair value, the best estimate of the number of awards that are likely to vest and any expired portion of the vesting period. The amount recognised in the profit or loss for the period is the cumulative amount calculated at each reporting date less amounts already recognised in previous periods.
