

Urea Manufacturing Facility Binding Heads of Agreement

Leigh Creek Energy Limited (LCK, or the Company) announces that it has entered into a binding Heads of Agreement with leading South Korean engineering and construction company, DL E&C Co., Ltd. (part of the DL Group) to exclusively negotiate terms of a proposed agreement for the Feasibility Study, FEED and EPCC, for which Finance will be arranged by LCK and/or DL E&C.

Highlights

- Execution of the binding Heads of Agreement (HoA) grants DL E&C Co., Ltd. (DL E&C) an exclusive right to negotiate the terms & conditions of the proposed agreement (Agreement) by 31 May 2021.
- Under the HoA, DL E&C and LCK agree to settle the Agreement terms by which DL E&C will become the Engineering, Procurement, Construction, and Commissioning (EPCC) contractor.
- Under the Agreement DL E&C will be contracted for the Feasibility, Front End Engineering & Design (FEED) stages, the EPCC contract and start-up of the urea manufacturing facility will be exclusively negotiated between the two parties.
- Under the Agreement, DL E&C with LCK's assistance will arrange the required finance for the turnkey price of the urea manufacturing facility from mainly Korean financial institutions.
- DL E&C is a leading global engineering, procurement and construction contractor with deep technical expertise and corporate capability to partner with LCK.
- Once the Agreement is finalised LCK will retain 100% ownership of the Leigh Creek Energy Project (LCEP).
- The LCEP will be the only fully integrated urea production facility in Australia, with all inputs for low carbon urea production on-site. The project has strong economics with a Pre-tax leveraged Net Present Value (NPV) of A\$3.4 billion, and an Internal Rate of Return (IRR) of 30%.

About DL E&C

Incorporated in 1939, DL E&C (former Daelim Industrial Co., Ltd.) is the flagship company of the DL Group, which consists of thirteen affiliates. As a leader in the construction sectors in Korea, DL E&C provides a wide variety of products and services.

DL E&C has successfully completed more than 600 projects of construction, civil engineering, and plant projects in thirty five countries worldwide. It has been recognised for its technical leadership and strong competitiveness in the global market.

In its early history DL E&C made major contributions to Korean landmarks and iconic buildings including Korea's artery road, Gyeongbu Expressway, Seoul Metropolitan Subway, POSCO, National Assembly Building, Seoul Olympic Main Stadium, Gwanghwamun Square and Yi Sun-Sin Bridge.

Since its first overseas project in 1966, DL E&C has played a pioneering role in penetrating overseas markets. Beyond the traditional roles of design and construction, DL E&C is including project exploration, planning, investment, financing, construction, and operation in its portfolio and building a foundation to grow as a leading developer.

Currently, DL E&C is undertaking projects in global markets including the U.S., Saudi Arabia, Kuwait, China, Vietnam, Singapore, and Brunei. Refer DL E&C website for further information: <http://www.dlenc.co.kr/eng> and appendix to this release.

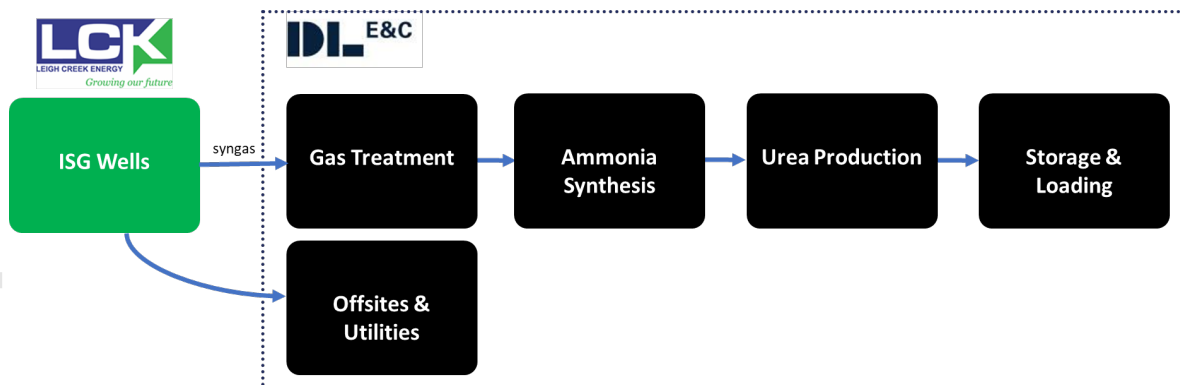

LCK Managing Director Phil Staveley commented as follows:

"This HoA is a major milestone for LCK as we are partnering with a leading global organisation with huge experience. We have chosen DL E&C from a pool of contenders as we are confident that they can deliver a first class urea production facility which will employ the latest innovative technology and that they will be a reliable partner."

Construction of the LCEP plant will create thousands of South Australian jobs during construction, commissioning and operation."

Scope of Work

The HoA gives exclusivity to DL E&C to settle the EPCC contract terms and conditions with LCK under the Agreement. The contract scope covers the Feasibility Study and FEED (gated by FID), the EPCC on a turnkey lump sum basis. Financing for the components of the LCEP will be broadly allocated between LCK and DL E&C per the diagram below.

Agreed Principal Terms

The HoA executed by DL E&C and LCK outlines the principals for the Feasibility Study, FEED, Engineering, Procurement, Construction, Commissioning and Financing Arrangements for LCK's urea manufacturing facility to be included in the final Agreement. The primary agreed principals are as follows:

- DL E&C will manage the LCEP Feasibility Study and FEED for FID. Once FID is made, DL E&C will lead engineering and construction of ammonia and urea production infrastructure.

- Under the Agreement, DL E&C with LCK's assistance will arrange the required finance for the turnkey price of the urea manufacturing facility from mainly Korean financial institutions.
- Once the Agreement is finalised LCK will retain 100% ownership of the LCEP.

LCEP Commercial Development

The chart below tracks LCK's commercial development milestones for its downstream development plan. Execution of the HoA accelerates LCK towards completion of the EPC, Feasibility Study and FEED milestones. Once the Agreement has been settled and DL E&C commences work, these milestones will be in progress.

Downstream Commercial Development

The Board of Leigh Creek Energy Limited authorised this announcement to the ASX.

About Leigh Creek Energy

The Leigh Creek Energy Project (LCEP) is Leigh Creek Energy's (ASX:LCK) flagship project, developing low-cost nitrogen-based fertiliser for local and export agriculture markets. Located in South Australia, 550 kilometres north of Adelaide, the LCEP will initially produce 1Mtpa (with potential to increase to 2Mtpa) of urea using LCK's 1,153PJ 2P gas reserves.

The \$2.6 billion LCEP will be one of the biggest infrastructure projects of its type in Australia, providing long term economic development and employment opportunities for the communities of the Upper Spencer Gulf region, northern Flinders Ranges and South Australia.

The LCEP will be the only fully integrated urea production facility in Australia, with all inputs for low carbon urea production on-site. Average nominal operating cost are forecast to be \$109 per tonne which is within the lowest cost quartile of the global urea production cost curve. Pre-tax leveraged Net Present Value (NPV) is A\$3.4 billion, with an Internal Rate of Return (IRR) of 30%.

LCK has a comprehensive environment, social and governance strategy. It has produced syngas within all approved environmental parameters set by the regulator and will be carbon neutral by 2030.

Resource Compliance Statement

The information in this announcement that relates to the 2P Syngas Reserve was detailed in an announcement lodged with ASX on 27 March 2019 and is available to view at www.lcke.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in that announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. All estimates are based on the deterministic method for estimation of petroleum resources.

PETROCHEMICAL DEVELOPER

Cariflex Business Acquisition, USA

In 2020, Daelim Industrial entered the high-value synthetic rubber and latex market in earnest by acquiring the Carriflex business of Creighton. As a result, the company secured not only original technologies including Cariflex's Brazilian production plant and Dutch R&D center, but also sales organizations and goodwill in the United States, Germany, Belgium, Japan, and Singapore.

Daelim Industrial plans to establish a new ecosystem for medical materials in Korea by localizing medical materials and establishing new domestic production plants.

Amiral PIB Project, Saudi Arabia

Daelim Industrial is pursuing a project to operate a polyisobutylene plant in Saudi Arabia. We plan to build and operate a world-class plant capable of producing 80,000 tonnes of polyisobutylene per year in the Petrochemical Complex in Jubail, eastern Saudi Arabia.

CIVIL INFRASTRUCTURE DEVELOPER

Canakkale Bridge Project, Turkey

Canakkale Bridge is the world's longest suspension bridge that connects Asia and Europe across the Dardanelles Strait in Turkey. Daelim Industrial is one of the major sponsors

and lead EPC Contractor overseeing development, financing and operation as well as execution of EPC turnkey (Engineering, Procurement, Construction).

The project will have concession period of 16 years and 2 months including construction and operation of the bridge with minimum traffic guarantee.

Gulpur Hydropower Plant Project, Pakistan

Gulpur Hydropower Plant Project, located in Kashmir region of Pakistan, is constructed to supply electricity generation of 456 GWh per annum.

The project was developed by Daelim Industrial Co., Ltd in joint investment with KOEN under IPP scheme for the revenue stream of 30 years during the operation period after the construction.

HOUSING & BUILDING DEVELOPER

Acro Seoul Forest, South Korea

The Acro Seoul Forest project presented a new paradigm of high-end residential complexes that are 'mixed-use of residential, culture and business'.

With this Acro Seoul Forest project, Daelim Industrial leads this project as a developer that in charge of the initial project review, construction and operation management.

D-Tower, South Korea

One of the most popular places to visit in Seoul, D-Tower is a platform that reflects the newest gourmet trend in Korea. Enticing landmark of Gwanghwamun, D Tower is an urban complex that consists of offices, restaurants with variety of concepts, cafés, pubs, and retail shops. With an open-air cultural space, D Tower consists of relaxing and welcoming atmosphere mingled with pleasant office environment. Daelim Industrial performed all stages of the development project from planning to building management. D-Tower is composed of 80,000 m² of prime-class of business facilities and 20,000 m² of premium sales facilities with an indoor terrace.

Expanding into the International markets by securing competitiveness on bridges/ports

The Civil Business Division of Daelim is known for the highest level of performance and know-hows in diverse fields such as roads / bridges, hydroelectric power plants & dams / ports, railways / subways in the domestic market. In particular, we were successful in developing our own self-reliant suspension bridge technology for the first time in South Korea and the sixth in the world.

While focusing on our leading expertise in bridge and port technologies, which allow us to have competitive edge over competitors with unique and differentiated technologies, we are expanding our geographical footprint into new overseas markets while securing competitiveness in previously involved markets.
