

16 September 2021

## **Drilling to Recommence at ‘Snowstorm’ at Swifts Creek in Victoria**

### **Highlights**

- **Drilling to recommence at Snowstorm before the end of September**
- **Program minimum target of 1,500m extending on previous drilling results**
- **Ongoing works to target extensions to the existing 3.1m @ 11.6 g/t Au**

First Au Limited (ASX: FAU) (“First Au” or “the Company”) has received confirmation from Starwest, the drilling company, that it will be on site within the next two weeks for the upcoming program the Snowstorm gold project (located in the Swifts Creek Goldfields, East Gippsland).

The primary goal of the program is to extend on previous drilling results with focus areas around areas that showed strong mineralisation. Gold mineralisation appears to be structurally controlled. The drilling will look to delineate economic widths along the Dispute Reef (lower) and Rex Reef (upper) zones. Specifically, targeting the SW extension of SNDDH002 intersection of 3.1m @ 11.6 g/t Au<sup>1</sup> and SW extension of SNDDH005 intersection of 2.9m @ 3.41 g/t Au<sup>2</sup> (Figure 1). The program will look to target mineralisation along strike and down plunge of the maiden drilling and rock chipping results (Figure 2).

First Au will be undertaking a targeted minimum of 1,500m of diamond drilling. The overall program is expected to be completed over several months. The Company will provide periodic updates as results begin to flow.

The previous drilling results combined with recent field-based exploration has provided First Au with the confidence to deliver strong results with the upcoming program.
