Investor Presentation
April 2022

Disclaimer

This Presentation has been prepared as a summary only and does not contain all information about Future Metals NL ("Future" or "FME" or the Company) assets and liabilities, financial position and performance, profits and losses, prospects and rights and liabilities The information in this Presentation and made to you verbally is subject to updating, completion, revision, further verification and amendment without notice

The information contained in this Presentation or subsequently provided to the Recipient of this Presentation whether orally or in writing by or on behalf of FME or its employees, agents or consultants is provided to the Recipients on the terms and conditions set out in this notice. The purpose of this Presentation is to provide Recipients with Information relating to FME The Presentation has been prepared by FME and each Recipient must make his/her own independent assessment and investigation of FME and its business and assets and should not rely on any statement or the adequacy and accuracy of any Information contained in this Presentation

FME makes no representation or warranty (express or implied) as to the accuracy, reliability or completeness of the Information FME and its directors, employees, agents and consultants shall have no liability (including liability to any person by reason of negligence or negligent misstatement) for any statements, opinions, information or matters (express or implied) arising out of, contained in or derived from, or for any omissions from the Presentation, except liability under statue that cannot be excluded

The performance and operations of FME may be influenced by a number of factors, many of which are outside the control of FME No representation or warranty, express or implied, is made by FME or any of its directors, officers, employees, advisers or agents that any intentions, expectations or plans will be achieved either totally or partially or that any particular rate of return will be achieved This Presentation does not constitute in any way an offer or invitation to subscribe for securities in FME pursuant to the Corporations Act

Statements regarding FME's plans with respect to its mineral properties are forward looking statements There can be no assurance that FME's plans for development and or sale of its mineral properties will proceed as currently expected There can also be no assurance that FME will be able to confirm the presence of mineral deposits, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of FME's mineral properties

The information in this report that relates to Exploration Results is based on, and fairly represents, information compiled by Mr Shane Hibbird, who is a Member of the Australasian Institute of Geoscientists Mr Hibbird is a consultant of the Company and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves" (JORC Code) Mr Hibbird consents to the inclusion in this report of the matters based upon his information in the form and context in which it appears

The information in this announcement that relates to Metallurgical Results is based on, and fairly represents, information compiled by Mr Brian Talbot, a Competent Person who is a Member of the Australian Institute of Mining and Metallurgy. Mr Talbot is a full-time employee of R-Tek Group Pty Ltd (R-Tek) a specialist metallurgical consultancy. Mr Talbot has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves" (JORC Code). Mr Talbot consents to the inclusion in this announcement of the matters based upon his information in the form and context in which it appears.

The information in this Presentation which relates to Mineral Resources was stated in the Company's Prospectus dated 18 May 2021 The Company confirms that is not aware of any new information or data that materially affects the information included in the Prospectus relating to Mineral Resources, and that all material assumptions and technical parameters underpinning the Resource Estimate continue to apply and have not materially changed

References may have been made in this announcement to certain past ASX announcements, including references regarding exploration results. For full details, refer to the referenced ASX announcement on the said date. The Company confirms that it is not aware of any new information or data that materially affects the information included in these earlier market announcements

Metals for a Sustainable Future

Panton hosts the perfect suite of metals to support the growing demand from manufacturers of catalytic convertors, hydrogen electrolysers and fuel cells, and batteries.

Servicing the clean energy transition

14Mt Resource containing 2.4Moz PGM + Au; 38kt Ni; plus rhodium & iridium¹

Strong sustained price environment

Driven by growing demand for palladium, platinum and nickel in clean energy applications

Top tier jurisdiction

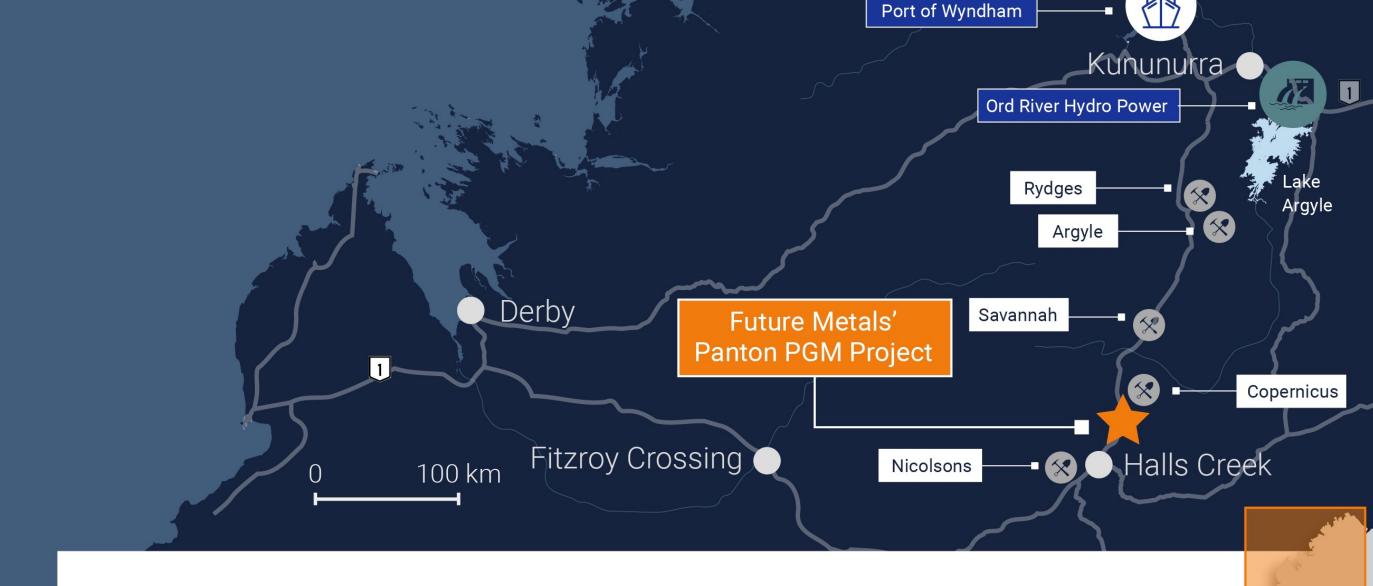

Significant opportunity for diversification of PGM supply away from Russia and South Africa

Large-scale potential

Broad, shallow mineralisation identified outside of the current high-grade MRE

Progressed Metallurgy

20+ years of test work programs, current work aligning to bulk tonnage strategy

Project Advanced:

Granted Mining Leases and prior environmental, heritage surveys

Infrastructure Advantage:

Proximate to sealed roads, port, airport and hydropower

Supportive Investment Location:

Strong government support for development of critical mineral deposits

Supporting the Clean Energy Transition

Near-term demand

for new combustion vehicles as microchip & semiconductor shortage to recover by 20231

Medium-term demand

as PGM loadings per ICE/hybrid vehicle increasing with global net zero goals²

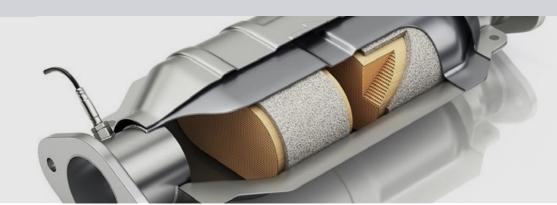

Long-term demand

provided by increased uptake of hydrogen fuel cells & electrolysers²

Catalytic convertors for internal combustion engines and hybrids

Palladium

Hydrogen electrolysers and fuel cells

Cathode Active Materials for Electric Vehicles

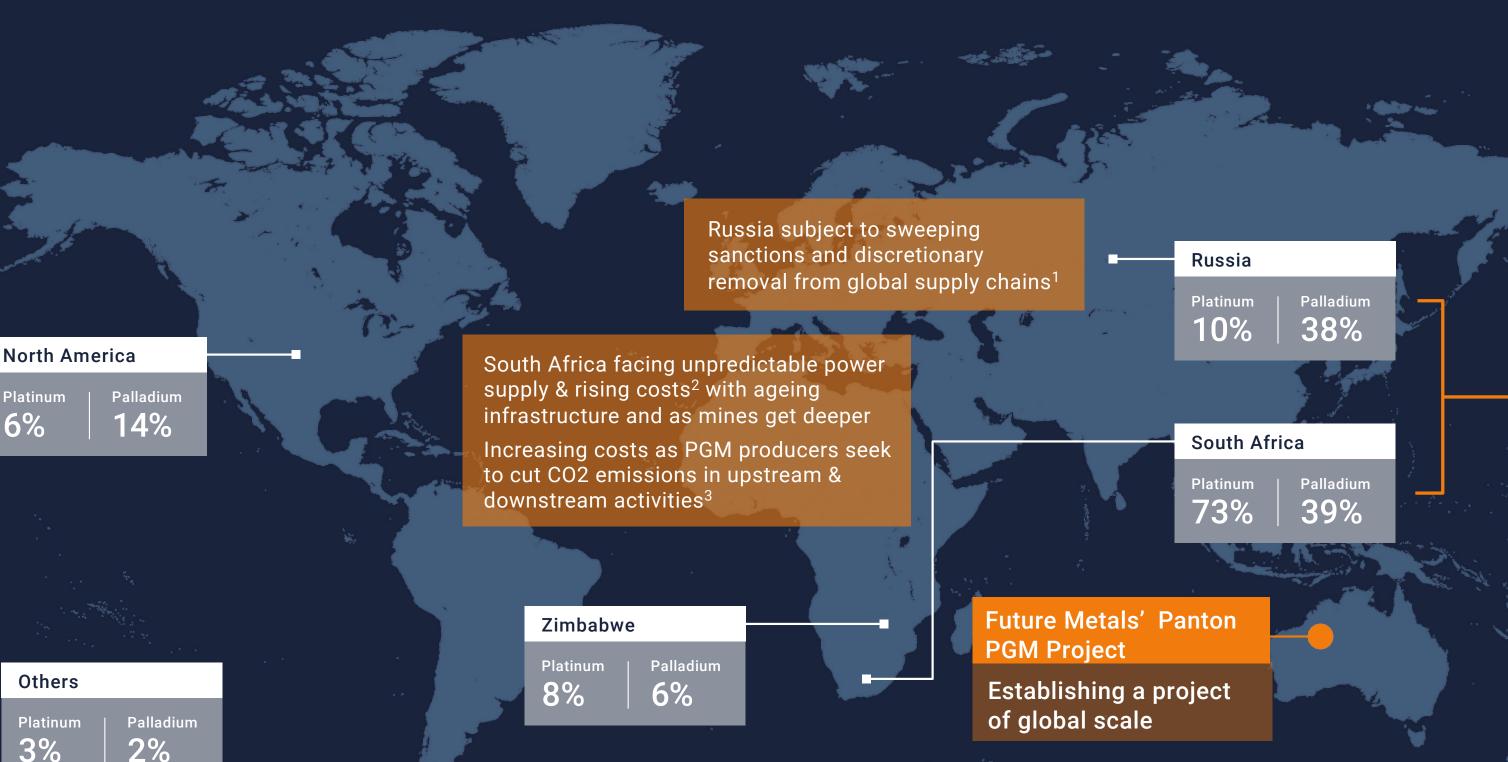

Origin of Supply Increasingly Important

Majority of PGM supply concentrated in Russia and South Africa

Together Russia & South Africa currently control:

83%

Platinum Supply

77%

Palladium Supply

FUTURE METALS

Proving Panton's Bulk Mining Potential

Orebody is being remodelled, supported by fundamental improvements in PGM & Ni prices

Location & Infrastructure

A well serviced and active mining region

Port Facilities

Hydropower

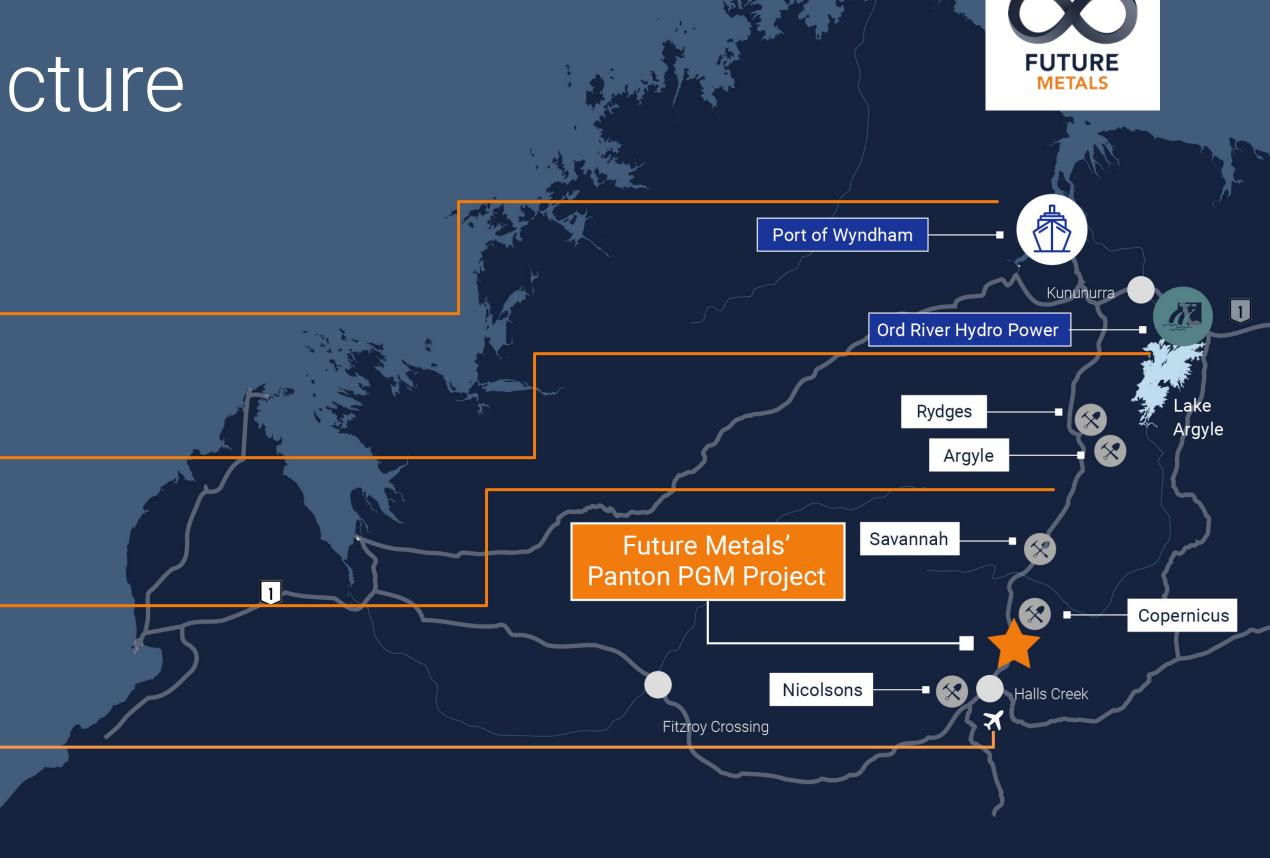

Great Northern Highway

Sealed Airstrips

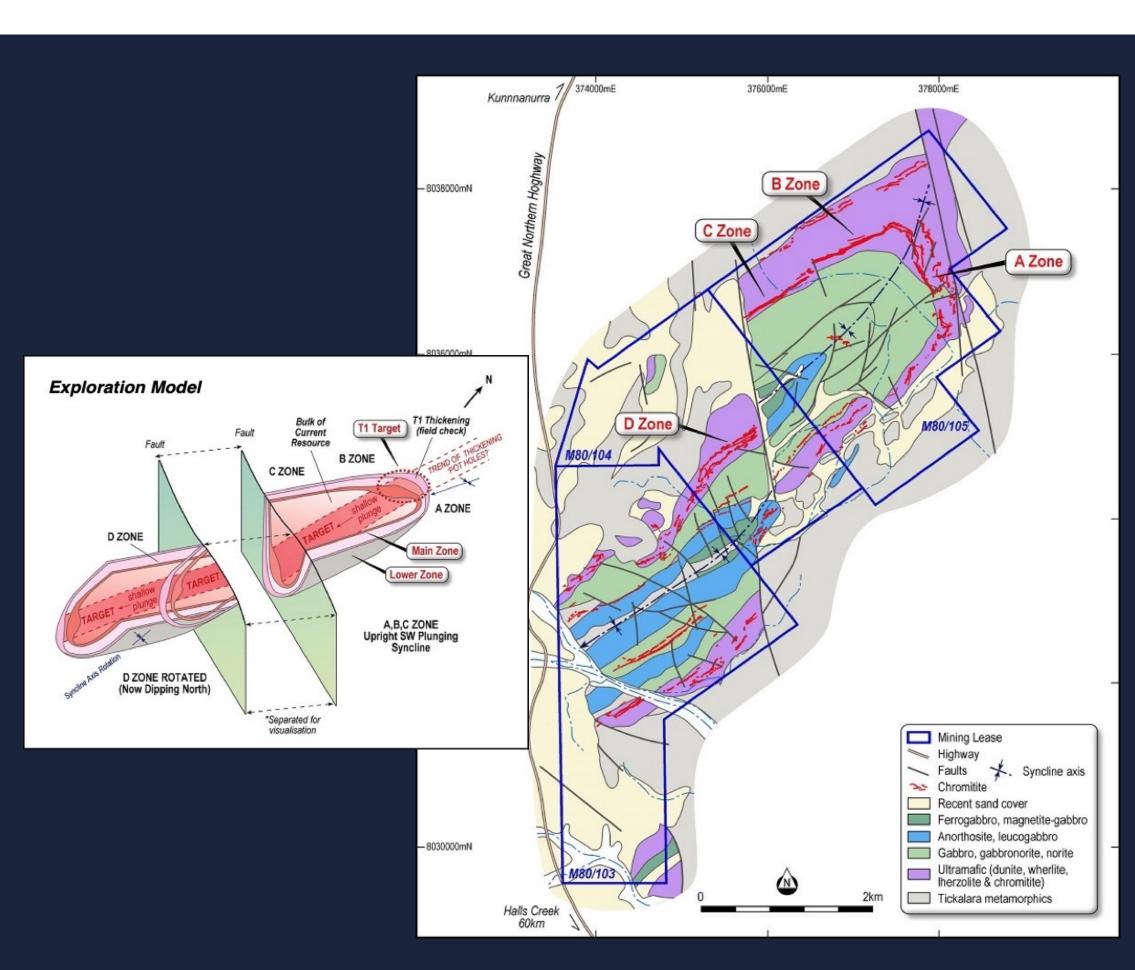

Multiple Mining Operations

Panton Geology

- 10km long, 2.5km wide and 1.7km thick layered maficultramafic intrusion
- Folded into a south-westerly plunging synclinal structure with extensive cross faulting
- Mineralisation is associated with PGM rich outcropping chromitite reefs and surrounding dunite
- Three sub-parallel chromitite reefs with only the 'Top Reef' and 'Middle Reef' included in MRE, divided into:
 - A Zone | 850m north-south strike, dipping 30-400 west
 - B Zone | 1,000m south-west strike, subvertical dip
 - C Zone | 850m south-west strike, subvertical dip
 - D Zone | 800m north-east strike, dipping 600 north-west
- Combined strike length of 3.5km and 'open'

Panton JORC Mineral Resource

14.3Mt at 5.2g/t PGM & gold for 2.4Moz¹

- Includes high grade Top Reef of:
- 10Mt at 6.13g/t PGM & gold for 2.0Moz¹
- PGM's include high-value rhodium and iridium
- Additional nickel, cobalt and copper mineralisation
- Resource underpinned by >45,000m of RC & diamond core drilling
- ~90% of Resource classified as 'Measured & Indicated'
- Resource interpretation based on a +2g/t PGM envelope | potential for significant additional mineralisation

Bulk Mineralisation Potential

Panton's JORC Resource is constrained to the Upper & Middle Reef mineralisation (2.0 g/t lower cut-off) which extends along 3.5km of strike, down to a depth of 600m at mineralised width between 1-2m

Recent and historical drilling confirming mineralised width extends over 50m in the surrounding dunite rock, with strong continuity along the 3.5km strike

Demonstrates strong Resource growth potential

Bulk PGM-Ni mineralisation outside MRE (at 0.5g/t cut-off):

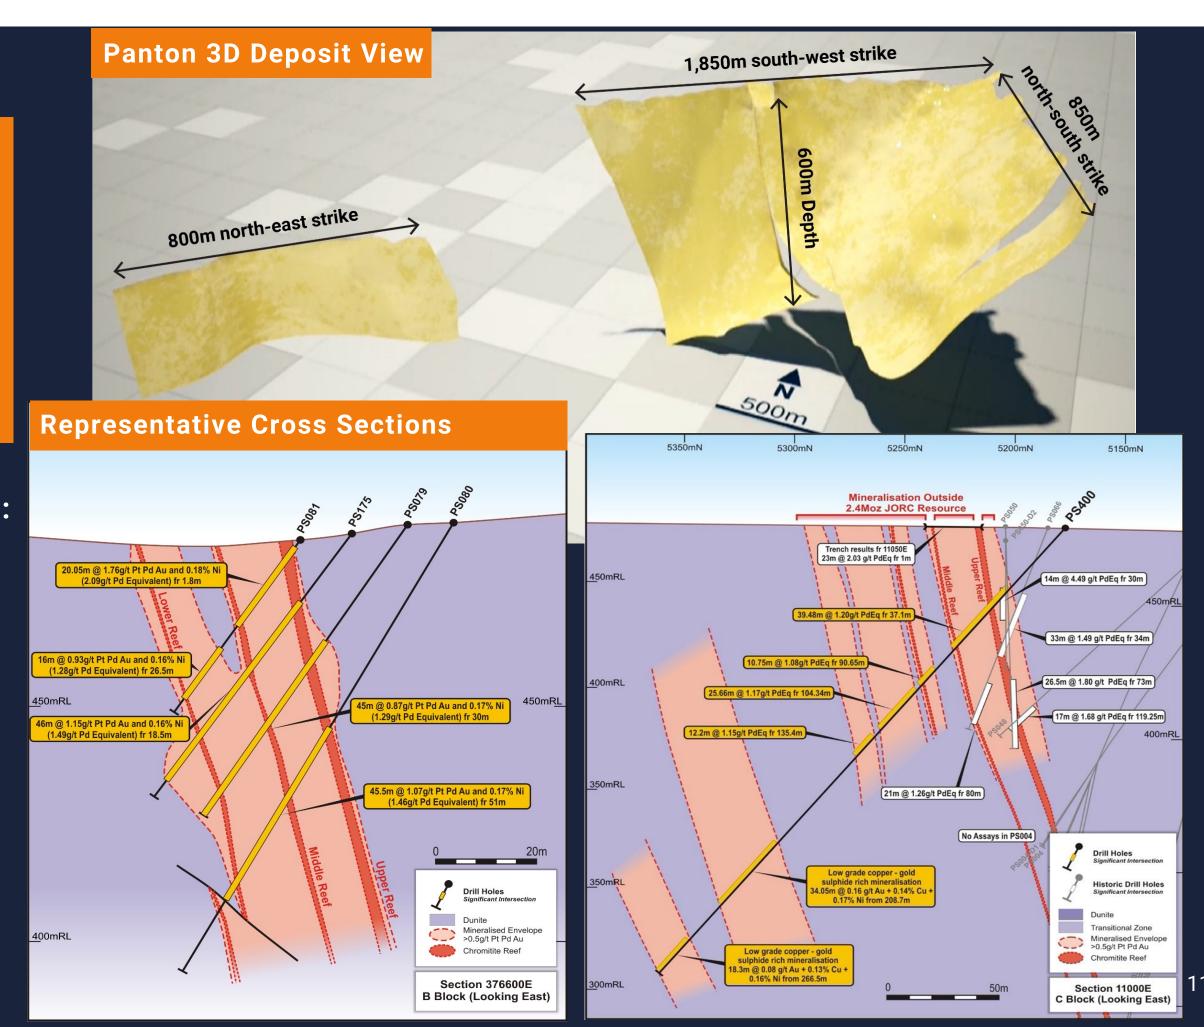

74m @ 1.32g/t PGM(3E) & 0.20% Ni (1.71g/t PdEq) fr 111m

45.5m @ 1.38g/t PGM(3E) & 0.22% Ni (1.81g/t PdEq) fr 80.5m

45.5m @ 1.07g/t PGM(3E) & 0.17% Ni (1.46g/t PdEq) fr 51m

43.5m @ 1.22g/t PGM(3E) & 0.21% Ni (1.60g/t PdEq) fr 115.4m

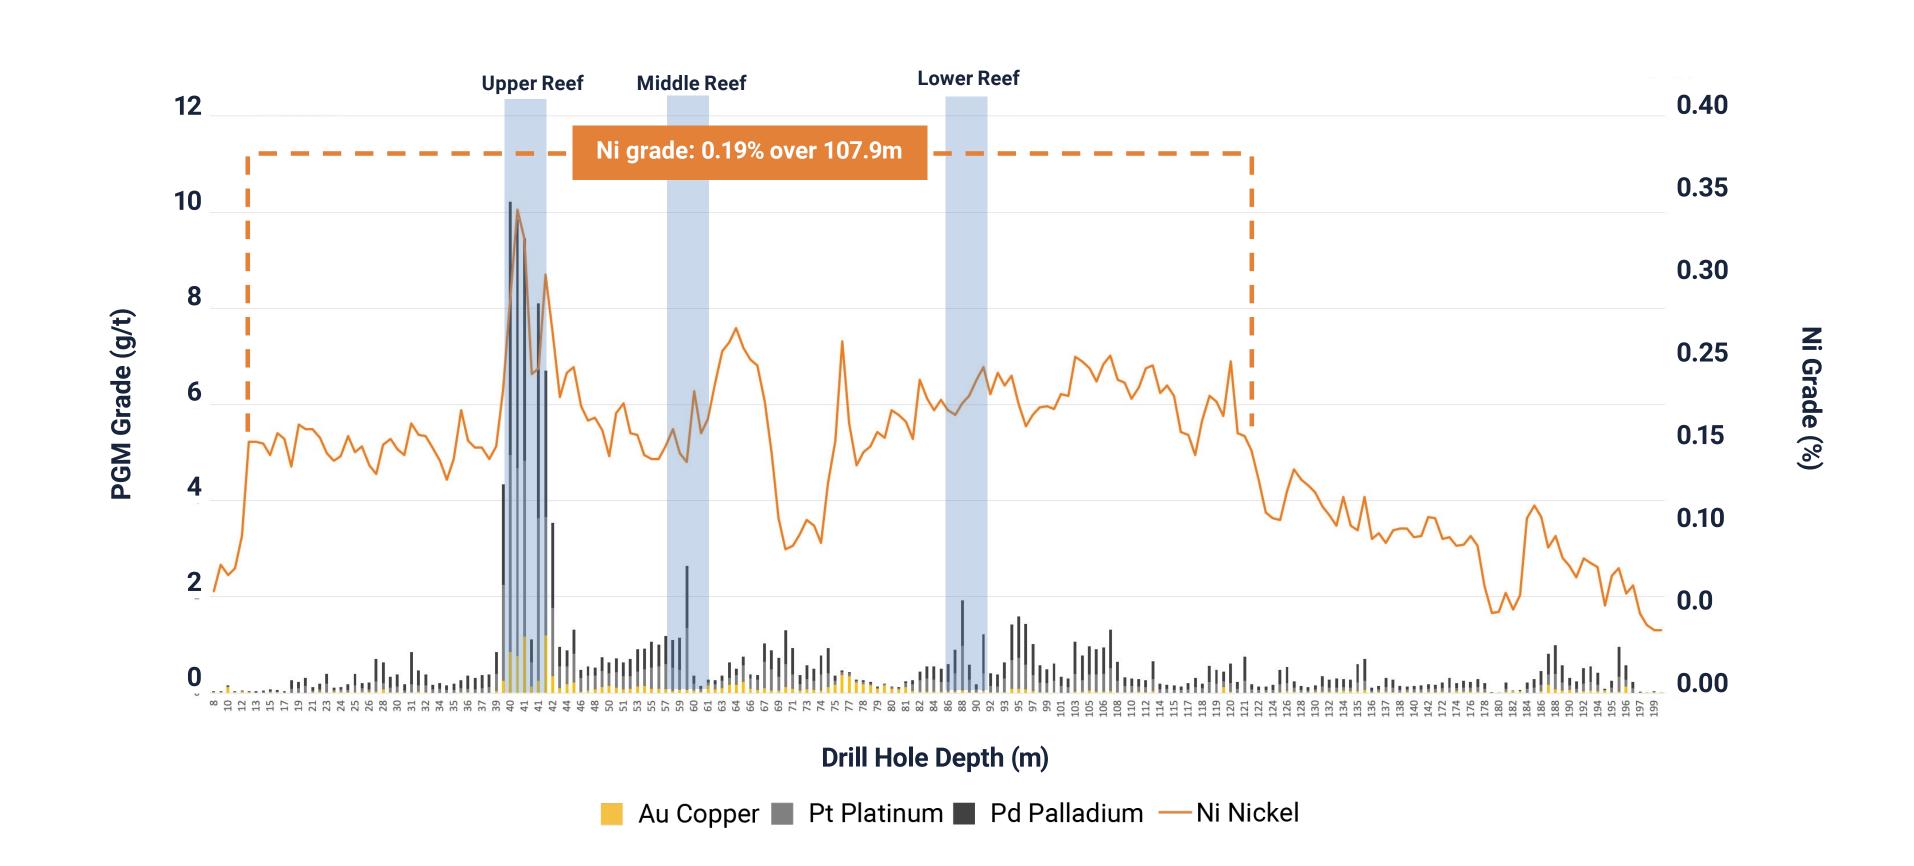

- 40.02m @ 1.42g/t PGM(3E) & 0.20% Ni (1.82g/t PdEq) fr 48m
- 28.5m @ 2.62g/t PGM(3E) & 0.21% Ni (2.93g/t PdEq) fr 21m
- 46m @ 1.15g/t PGM(3E) & 0.16% Ni (1.49g/t PdEq) fr 18.5m
- 26.1m @ 2.56g/t PGM(3E) & 0.21% Ni (2.87g/t PdEq) fr 14.5m
- 41.5m @ 1.23g/t PGM(3E) & 0.18% Ni (1.61g/t PdEq) fr 29.5m

Significant Contained Nickel

Ni grade demonstrating strong consistency independent of PGM grades, The below figure shows drill intercept (PS400) through Panton's mineralised zone

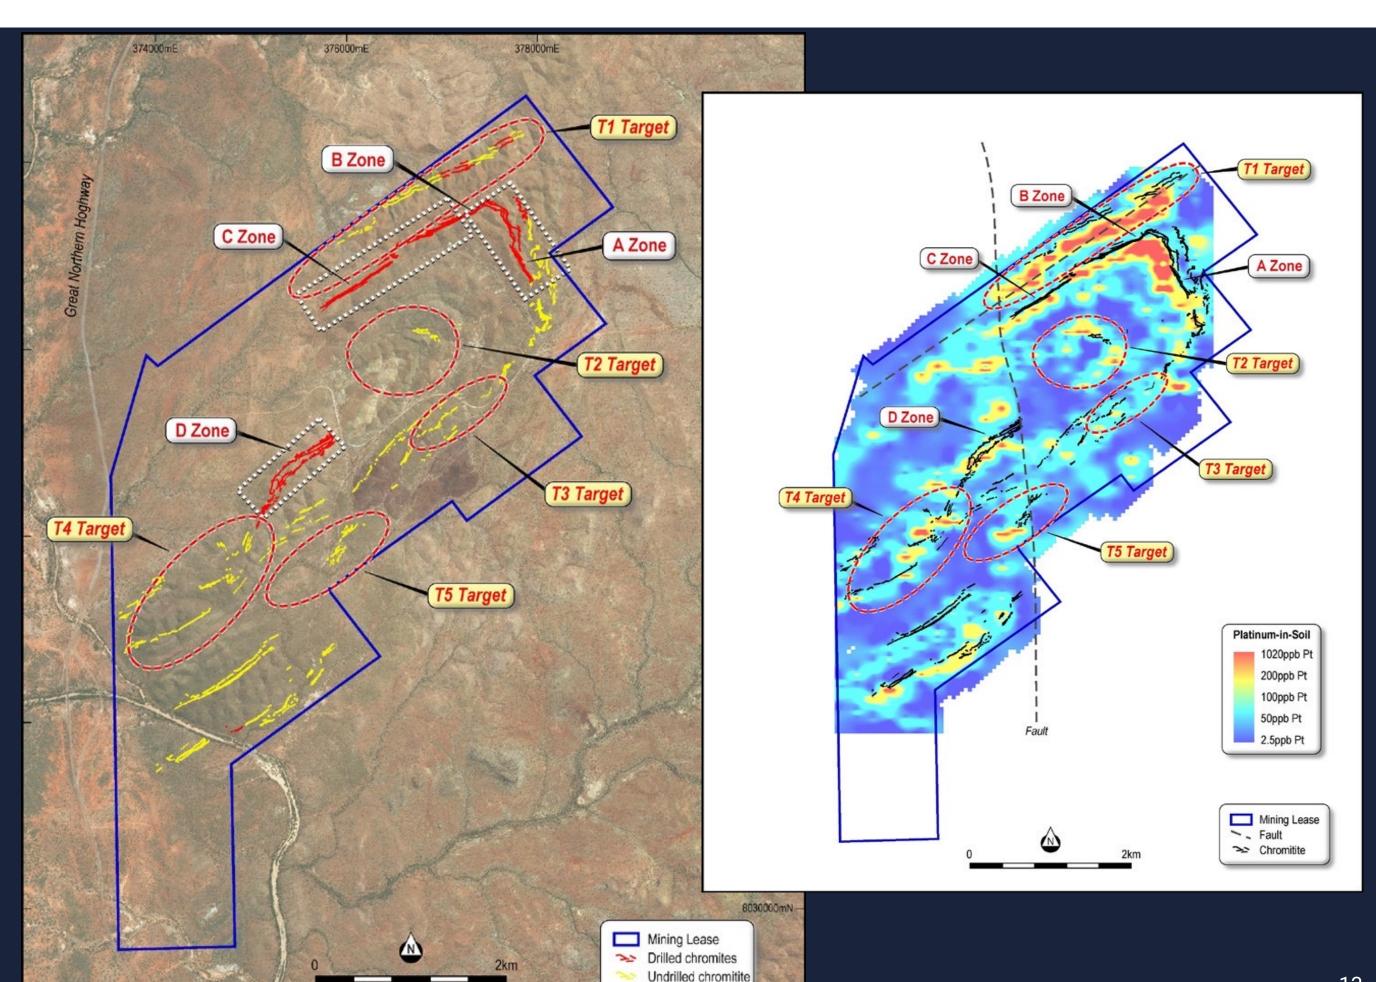

Exploration Potential

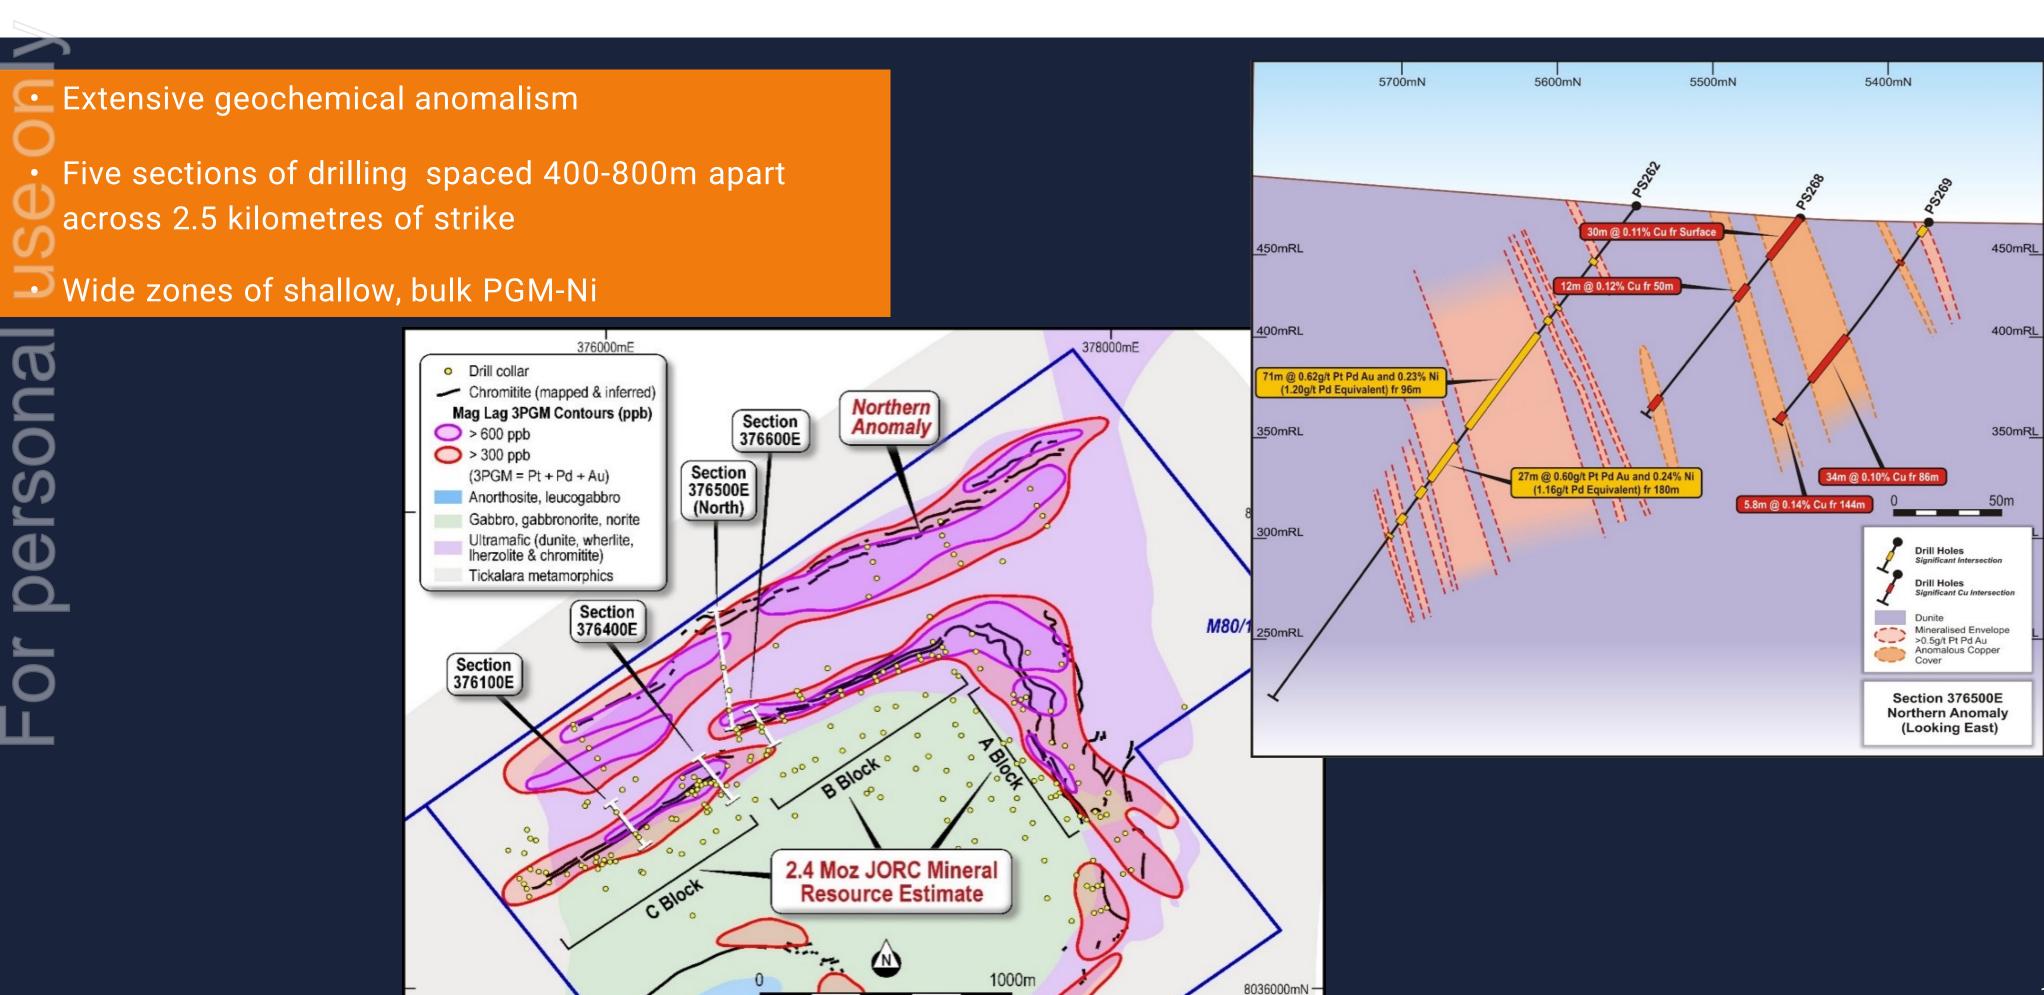

Resource remains OPEN in all directions, along strike and at depth

- 12km of outcropping mapped reef
- JORC Resource contained in just 3.5km
- High-grade depth extensions
- South western extensions of the D Zone
- Outcropping reefs in the central and south western portions of the intrusion

Northern Anomaly

Metallurgical Approach

Otilising significant body of metallurgical work to determine process route to support bulk mineralisation strategy

Prior test work shows >80% PGE recovery at high grades

PHYSICAL SEPARATION

- Focus on pre-concentration of feed material and potential to concentrate chromite tailings as additional revenue stream
- Completing various tests for amenability to physical separation; ore sorting, HLS and WHIMS on different size fractions of composite ore feed samples and flotation concentrate and tailings
- Following up previous success in ore sorting for pre-concentration of ore feed and separation of magnesite

FLOTATION

- Prior test work completed by PAN focussed on single-stage grind and flotation (1MF)
 at 38µm with reagent changes unlocking the step-change in recovery & grade
- Typical flow sheets for South African PGM operations processing analogous mineralogy utilise a 2MF or 3MF working from a coarse grind to fine grind and adapting reagent regime accordingly
- FME is combining learnings from prior test work with conventions and new technology developed over the past 20 years in the South Africa PGM industry as Panton-analogous UG2 ore became more prevalent
- Ore from weathered zone being tested for flotation amenability given Panton PGE metal elements occur as tellurides, antimonides and bismuthides – previous test work shows acceptable recoveries

FUTURE

Product Options

High-grade PGM concentrate and/or bulk Ni-PGM concentrate for sale to smelters

Chromite concentrate from tails

Refined Pd & Pt sponge | Ni-Co MHP, metal or salts | Cu metal for sale to refiners or end customers

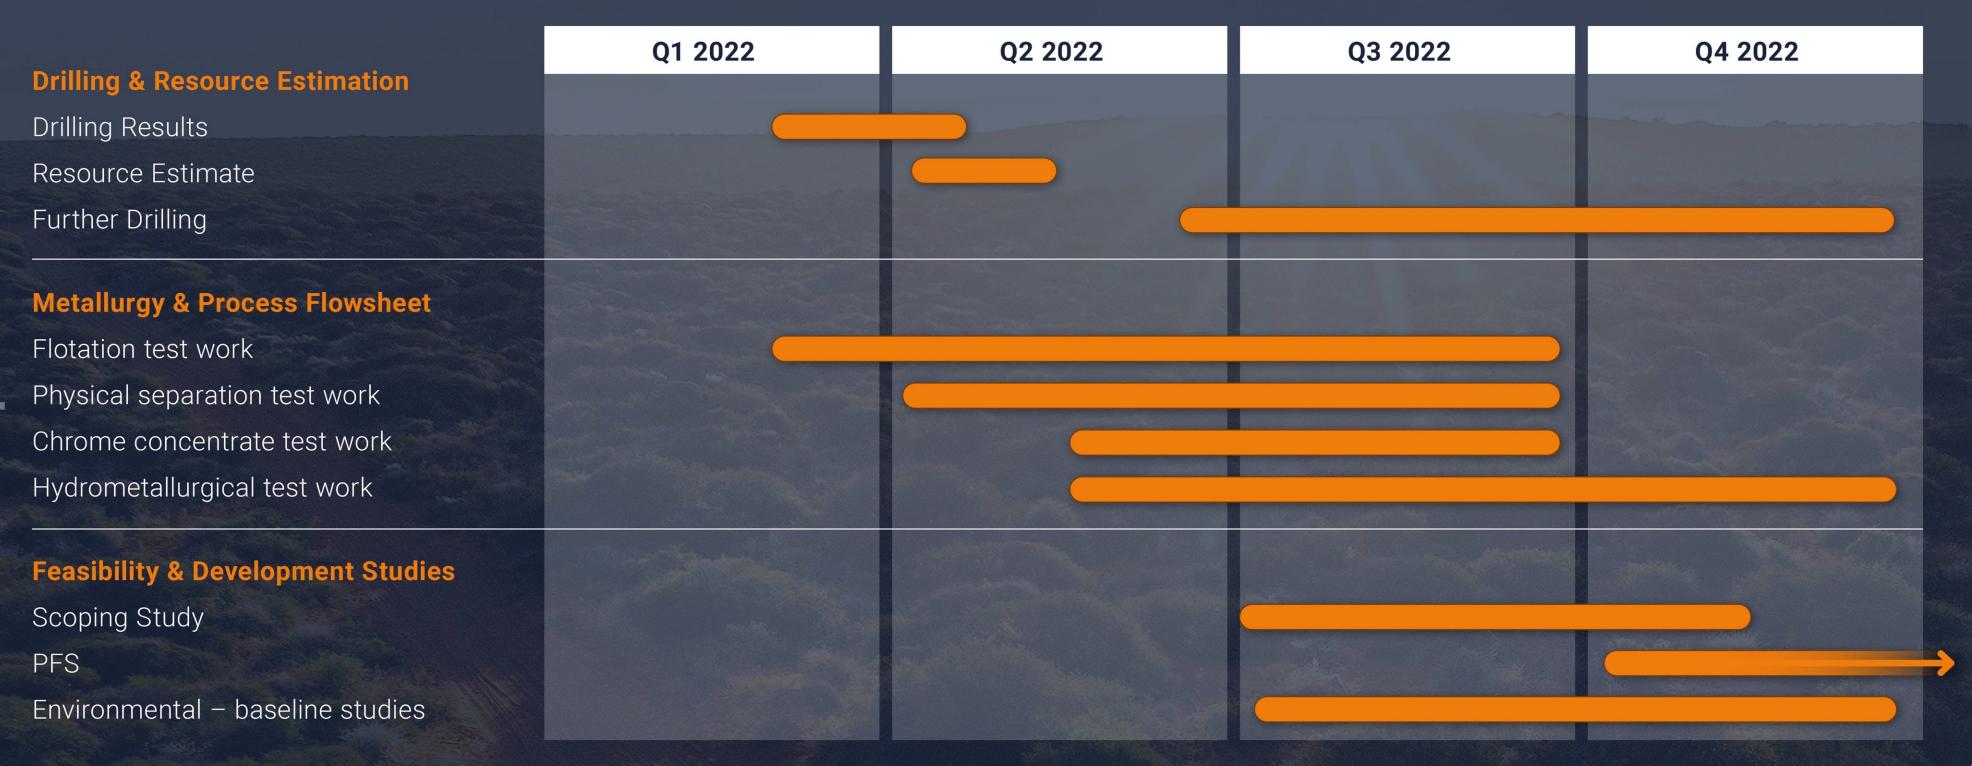

HYDROMETALLURGY

- Significant amount of test work completed by PLA and PAN, with technology developers
- Panton concentrate showed good amenability for a number of hydrometallurgy processing routes
- Benefits of a hydrometallurgical solution relative to smelting¹ include:
 - Improvement in payabilities across all metals
 - Less capital intensive
 - Faster relative processing times lead to working capital position improvement
 - Reduces Scope 3 emissions no shipping of concentrate and lower emissions of CO₂ and SO₂
 than smelting
 - Integration with downstream allows increased flexibility for upstream production

15

Becoming the First PGM Producer in Australia

Future Metals is committed to the core principle of delivering value through sustainable development.

The foundations of ESG are important to us, and we proactively uphold key responsibilities to ensure we are considered and transparent in all we do. With these foundations, we aim to build a roadmap to achieving economic, social and environmental sustainability in a balanced, mutually beneficial way for all stakeholders.

Metals for a Sustainable Future Why invest in Future Metals

Strong market fundamentals

Top mining jurisdiction

Quality management team

Resource growth potential

Progressed metallurgy
