## Updated Company Presentation

### “Diversified Uranium Assets in Tier 1 Jurisdictions”

Elevate Uranium Limited (ASX: EL8, OTCQX:ELVUF) is pleased to provide an update of its corporation presentation, highlighting its “Diversified Uranium Assets in Tier 1 Jurisdictions”.

#### **Authorisation**

# Diversified Uranium Assets in Tier 1 Jurisdictions

## 1. Namibia – 5<sup>th</sup> largest uranium resources in the world and 4<sup>th</sup> largest producer <sup>1</sup>

Uranium production has occurred for the past 46 years

- Koppies (Exploration and resource estimation soon)
- Hirabeb (Exploration)
- Capri (Exploration)
- Marenica (61 Mlb U<sub>3</sub>O<sub>8</sub> resource + exploration)

## 2. Australia – largest uranium resources in the world and 2<sup>nd</sup> largest producer <sup>1</sup>

- Angela (31 Mlb U<sub>3</sub>O<sub>8</sub> resource + exploration)
- Oobagooma (Exploration Target of 26 to 52 Mlb U<sub>3</sub>O<sub>8</sub>)<sup>2</sup>
- Minerva (Exploration)

See resource table on slide 20

1. International Atomic Energy Agency website – <https://www.iaea.org/>
2. "High-Grade Exploration Target at Oobagooma", 20 September 2021

# Delivering on Uranium Strategy

## Strategy

Acquire

Acquired projects / tenements that meet a defined criteria

Explore

Exploration of large strategic tenement position

*U-pgrade*<sup>TM</sup>

Value add through application of patented *U-pgrade*<sup>TM</sup> uranium beneficiation process

## Delivery

- Accumulated large strategic tenement position in Namibia and Australia
- Namibian uranium asset portfolio – resources of 61 Mlb U<sub>3</sub>O<sub>8</sub>
- Australian uranium asset portfolio – resources of 48 Mlb U<sub>3</sub>O<sub>8</sub>
- Significant exploration results achieved on tenements in Namibia, resource on Koppies soon
- *U-pgrade*<sup>TM</sup> beneficiation process expected to apply to assets – lowering cost base
- Elevate has been in the uranium business for 16 years

See resource table on slide 20

# Namibia

- Namibia is a Tier 1 Uranium jurisdiction; 4<sup>th</sup> largest producer & 5<sup>th</sup> largest resources in the world
- Namibia has an established uranium mining industry operating for 46 years
- 61 Mlb U<sub>3</sub>O<sub>8</sub> resource at Marenica Uranium Project, beneficiates to ~5,000 ppm U<sub>3</sub>O<sub>8</sub> using ***U-grade***<sup>TM</sup>
- Elevate is holder of the largest tenement area for uranium in Namibia
- Target mineralisation is calcrete hosted shallow palaeochannels, ideally suited for the application of ***U-grade***<sup>TM</sup>

See resource table on slide 20

# Namib Area

- Tenements are upstream of known deposits
- Exploration has achieved significant results
- Since mid 2019 Koppies, Hirabeb and Namib IV projects discovered in the area
- Exploration and resource drilling in progress, drill rig operational for all of 2022
- The Namib Area hosts >270 Mlb<sup>3</sup> of defined uranium resources

3. Deep Yellow Ltd data sourced from ASX announcement – “Drilling at Tumas 3 Delivers Significant Resource Upgrade”, 29 July 2021  
Paladin Energy Ltd data sourced from “BMO – 29<sup>th</sup> Global Metals & Mining Conference Presentation”

# Koppies Project

## Phase 1 resource drilling nearing completion

- Palaeochannel currently 6.4 km<sup>2</sup>
- Resource drilling program in progress
- Maiden Phase 1 resource expected in June Quarter 2022
- Additional resource drilling to occur during 2022
- Ore type is calcrete hosted, prime mineralisation for our **U-pgrade™** beneficiation process

# Hirabeb Project

## Exploration has identified extensive mineralised channels

- Tenement is 15 times larger than Koppies
- Palaeochannel extends >44 km
- Mineralisation identified over 30 km
- Next phase of exploration drilling scheduled to start in June Quarter 2022
- Ore type is calcrete hosted, prime mineralisation for our **U-pgrade™** beneficiation process

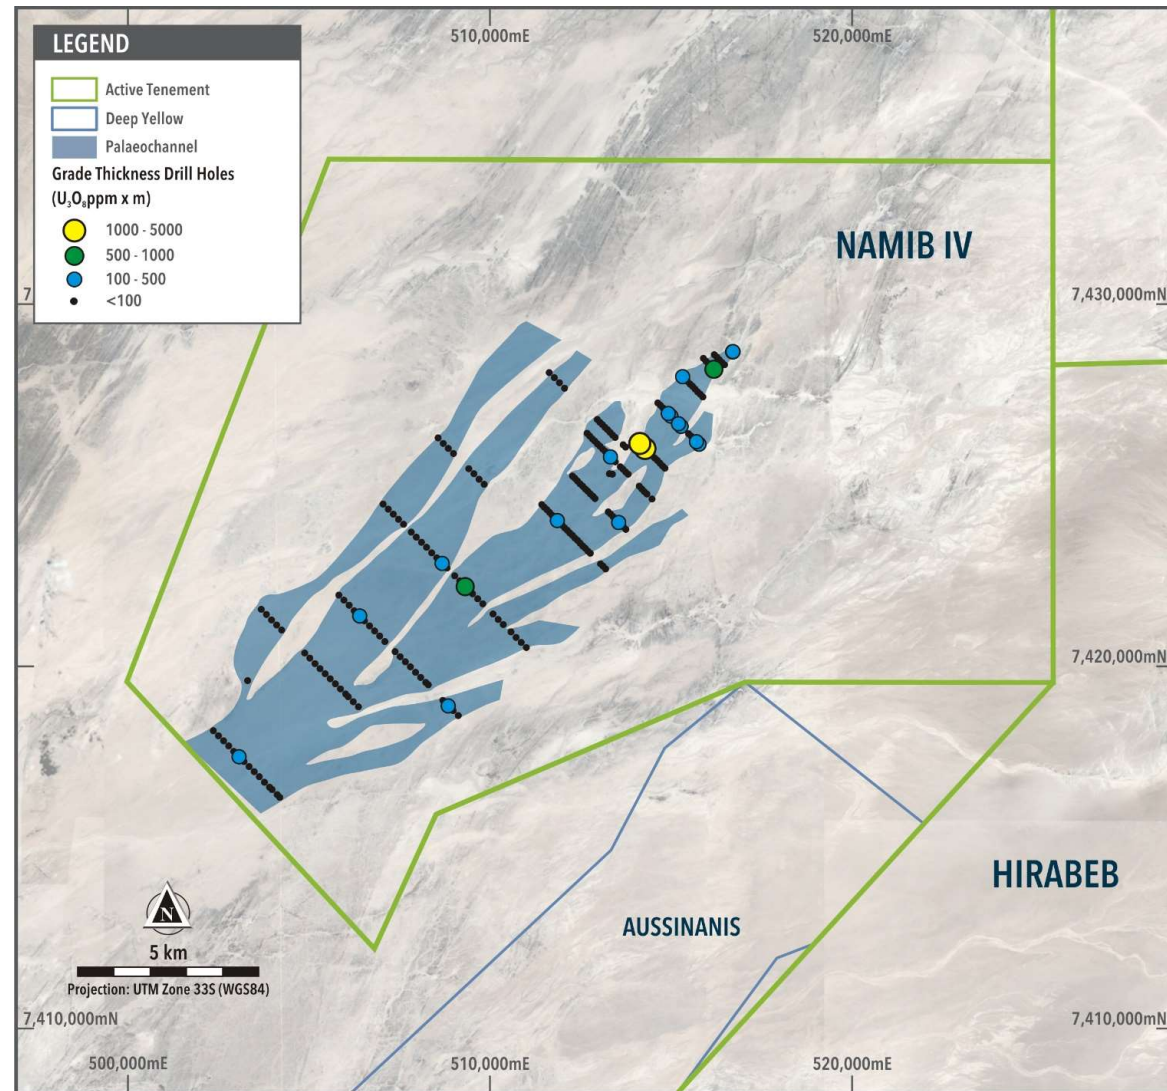

# Namib IV Project

## Exploration has identified uranium mineralisation

- Palaeochannel system approximately 18 km long and 5 km wide
- Mineralisation identified over 17 km strike
- Next phase of exploration September Quarter 2022
- Ore type is calcrete hosted, prime mineralisation for our **U-pgrade™** beneficiation process

# Central Erongo Area

- Marenica – large deposit (61 Mlb  $U_3O_8$ )
- Marenica only 30 km north of Trekkopje Mine and 55 km north of Rossing
- The area includes large calcrete hosted uranium resources at Marenica and Trekkopje
- Significant exploration potential in the area

See resource table on slide 20

Trekkopje Mine is owned by large French nuclear company Orano

# Marenica Project

## Large JORC resource, exploration upside

- 61 Mlb U<sub>3</sub>O<sub>8</sub> JORC resource
- Mineralisation is calcrete hosted in shallow palaeochannels
- Uranium ore beneficiates to ~5,000 ppm U<sub>3</sub>O<sub>8</sub> using **U-pgrade™**
- **U-pgrade™** has been demonstrated to reduce capital and operating costs by ~50%, compared to conventional processes
- Significant exploration upside in this area

See resource table on slide 20

# Capri Project

## Airborne survey identified extensive palaeochannels

Airborne survey flown in March 2022 identified 73 km of palaeochannels<sup>4</sup>

The presence of anomalous radiometric uranium response coincident with or immediately adjacent to the inferred palaeochannel could indicate shallow mineralisation

Maiden exploration drilling program scheduled for June Quarter 2022

Ore type is calcrete hosted, prime mineralisation for our **U-pgrade™** beneficiation process

4. ASX Announcement "73 km of Prospective Palaeochannels Identified at Capri", 16 March 2022

# Australia

Australia is a Tier 1 Uranium jurisdiction;  
2<sup>nd</sup> largest producer and largest resources in the world

## 100% Owned

- Angela – 31 Mlb at 1,310 ppm  $U_3O_8$
- Thatcher Soak – 11 Mlb at 425 ppm  $U_3O_8$
- Oobagooma – 26 to 52 Mlb  $U_3O_8$  Exploration Target
- Minerva – high-grade uranium and gold

## Joint Venture Interests

- Bigrlyi (21% EL8) – 21 Mlb at 1,283 ppm  $U_3O_8$
- Walbiri (23% EL8) – 16 Mlb at 641 ppm  $U_3O_8$
- Others (21-24% EL8) – 3.6 Mlb at 524 ppm  $U_3O_8$

See resource table on slide 20

# Northern Territory Projects

## Angela

- Inferred resource of 31 Mlb at 1,310 ppm  $U_3O_8$
- Application of ***U-pgrade™*** reduces projected acid consumption and operating costs
- Potential to expand resource and reduce cost base

## Minerva<sup>5</sup>

- 10 drill holes with grades in excess of 10,000 ppm or 1%  $U_3O_8$
- Uranium mineralisation over strike length of 2,400 m
- Significant exploration potential

# Western Australian Projects

## Oobagooma

- High grade uranium mineralisation from 40 to 180 m below surface
- 26 to 52 Mlb U<sub>3</sub>O<sub>8</sub> Exploration Target<sup>6</sup>
- Exploration potential

## Thatcher Soak

- Inferred resource of 11 Mlb at 425 ppm U<sub>3</sub>O<sub>8</sub>
- Located in same province as Yeelirrie, Centipede & Lake Maitland calcrete deposits
- Ore type is calcrete hosted, prime mineralisation for our **U-pgrade™** beneficiation process

See resource table on slide 20

6. "High-Grade Exploration Target at Oobagooma", 20 September 2021

# *U-pgrade*<sup>TM</sup> – “What is it?”

## **What is *U-pgrade*<sup>TM</sup>**

- Breakthrough ore beneficiation process developed, patented and 100% owned by EL8
- Rejects >95% of mined ore mass prior to leach
- Uses industry standard unit operations to beneficiate uranium ore
- Rejects acid consuming material and thereby reduces acid consumption

## **Demonstrated Benefits**

- Increases Marenica Project ore grade from 93 ppm to ~5,000 ppm  $U_3O_8$  (i.e. by removal of waste)
- Reduces Angela ore acid consumption by 80% (i.e. by removal of acid consumers)

# *U-pgrade*<sup>TM</sup> – “The Icing on the Cake”

## Significant Benefits

- Produces low-mass high-grade concentrate
- Potentially reduces CAPEX and OPEX by ~50%, compared with conventional processes
- Provides optionality for the project development pathway
- Potential for Elevate to develop projects others can't

## Environmental Benefit

- *U-pgrade*<sup>TM</sup> removes acid consuming waste material (“gangue”), reducing the volume of acid transported to the mining operation
- The gangue can then be added to leach tail to neutralise acid – producing inert, environmentally safe tailings
- *U-pgrade*<sup>TM</sup> reduces the ore to the leach plant by a factor of >20:1, therefore a small mass of ore is leached, thereby a smaller tailings storage area is required

# Corporate Snapshot

## Board & Management

Andrew Bantock	Non-executive Chairman
Murray Hill	Managing Director/CEO
Stephen Mann	Non-Executive Director
Shane McBride	CFO & Company Secretary
Dr Andy Wilde	Exploration Manager

Over 50 years  
of uranium  
experience

## Capital Structure

Share Price (5 Apr 2022)	\$0.66
Shares on issue	275 M
Options on issue	15 M
Market Capitalisation	\$182 M
Cash (31 Dec 2021)	\$16.4 M

\*NB: Additional \$1.4 M raised through option exercise 17 March 2022

## Share Price Chart (ASX:EL8)

# Investment Highlights

The Company has been solely operating in the uranium industry for 16 years

Namibian and Australian tenement holdings with significant uranium exploration results achieved and substantial upside for exploration success

61 Mlb  $U_3O_8$  resource at Marenica Uranium Project, Namibia

48 Mlb  $U_3O_8$  resources in Australia

**U-pgrade**<sup>™</sup> beneficiation process demonstrated to reduce capital and operating cost at the Marenica and Angela Projects

Experienced team with a proven track record in exploration and development of mining projects, over 50 years experience in uranium

Uranium enables production of baseload carbon free nuclear energy

# Disclaimer & CP's Statement

## **Disclaimer:**

This presentation has been prepared by Elevate Uranium Limited ("EL8") for general information purposes only. The presentation is not and should not be considered as an offer or invitation to subscribe for or purchase any securities in EL8. No agreement to subscribe for securities in EL8 will be entered into on the basis of this presentation. This presentation may contain certain forward-looking statements which have not been based solely on historical facts but rather on EL8's current expectations about future events and a number of assumptions which are subject to significant uncertainties and contingencies many of which are outside the control of EL8 and its directors, officers and advisers. Due care and attention has been taken in the preparation of this presentation. However, the information contained in this presentation including financial information and estimates (other than as specifically stated) has not been independently verified for EL8 or its directors and officers.

## **Marenica Uranium Project:**

The Company confirms that the Mineral Resource Estimate for the Marenica Uranium Project has not changed since the annual review included in the 2021 Annual Report. The Company is not aware of any new information, or data, that effects the information in the 2021 Annual Report and confirms that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

The Mineral Resource Estimate for the Marenica deposit was prepared in accordance with the requirements of the JORC Code 2004. The Mineral Resource Estimates were prepared and first disclosed under the 2004 Edition of the Australian Code for the Reporting of Exploration Results, Minerals Resources and Ore Reserves (JORC Code 2004). It has not been updated since to comply with the 2012 Edition of the Australian Code for the Reporting of Exploration Results, Minerals Resources and Ore Reserves (JORC Code 2012) on the basis that the information has not materially changed since they were last reported. A Competent Person has not undertaken sufficient work to classify the estimate of the Mineral Resource in accordance with the JORC Code 2012; it is possible that following evaluation and/or further exploration work the currently reported estimate may materially change and hence will need to be reported afresh under and in accordance with the JORC Code 2012.

## **Australian Uranium Projects:**

The Company confirms that the Mineral Resource Estimates for Angela, Thatcher Soak, Bigryli, Sundberg, Hill One, Karins, Walbiri and Malawiri have not changed since the annual review included in the 2021 Annual Report. The Company is not aware of any new information, or data, that effects the information in the 2021 Annual Report and confirms that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

The Mineral Resource Estimate for the Bigryli deposit was prepared in accordance with the requirements of the JORC Code 2004. The Mineral Resource Estimates were prepared and first disclosed under the 2004 Edition of the Australian Code for the Reporting of Exploration Results, Minerals Resources and Ore Reserves (JORC Code 2004). It has not been updated since to comply with the 2012 Edition of the Australian Code for the Reporting of Exploration Results, Minerals Resources and Ore Reserves (JORC Code 2012) on the basis that the information has not materially changed since they were last reported. A Competent Person has not undertaken sufficient work to classify the estimate of the Mineral Resource in accordance with the JORC Code 2012; it is possible that following evaluation and/or further exploration work the currently reported estimate may materially change and hence will need to be reported afresh under and in accordance with the JORC Code 2012.
