EXPLORATION ACTIVITIES

Decelles Acquisition

Immediately after listing, Winsome formed a partnership with Glenn Greisbach, a Quebec regional geology specialist, to expand its land portfolio by discovering and acquiring new properties in Quebec with a high degree of lithium potential.

This led to Winsome entering into an exclusive option agreement in late January 2022 to acquire 669 claims, totalling 385km², in the prospective Decelles region of Quebec, Canada. Decelles is located close to the mining centres of Val-d'Or and Rouyn-Noranda, approximately 600km from Montreal. The Company signed an exclusive option agreement to explore and subsequently acquire the claims over a 24-month period.

By entering into this agreement, the Company can more than double its land holding in Quebec and explore a new area of the province known for granitic and pegmatitic outcrops, located close to infrastructure and the major mining centres immediately adjacent to recent lithium discoveries (see Figure 1).

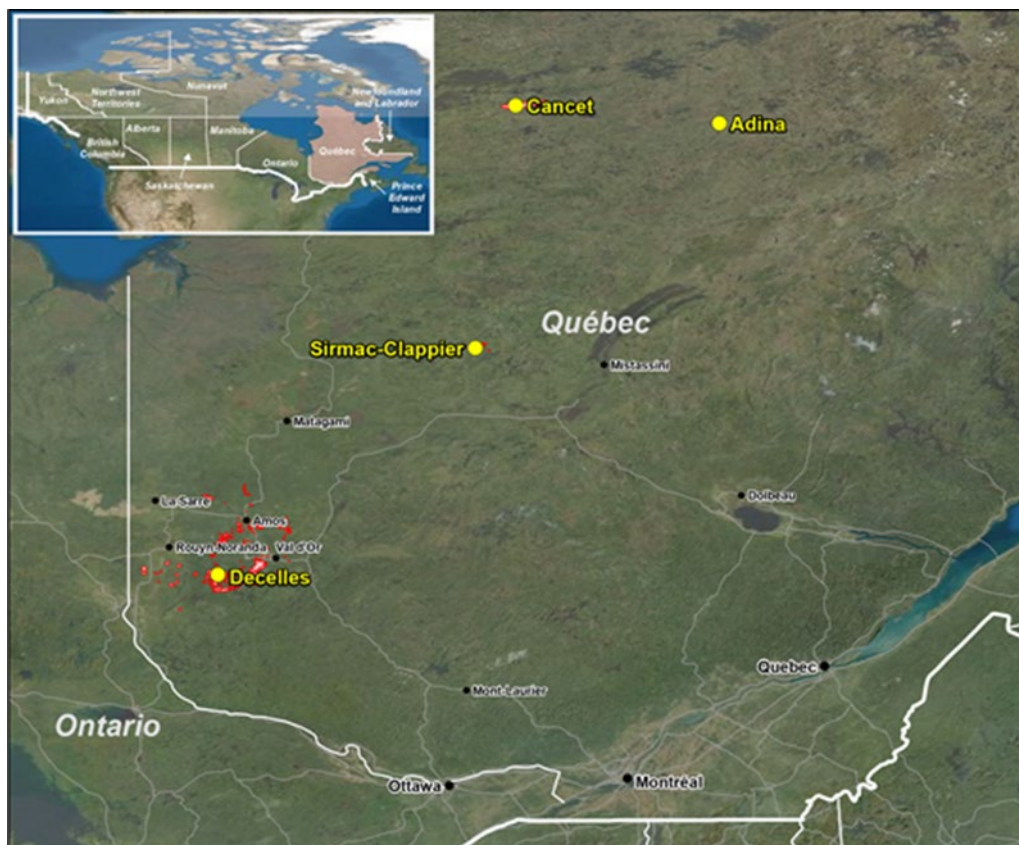

Figure 1 – Decelles project location in Quebec

The terms of the option agreement were as follows:

- An upfront fee of AU\$75,000
- AU\$250,000 paid in three tranches of WR1 shares, based on the five-day VWAP leading up to the transaction (AU\$0.417). This equated to:
 - 200,000 WR1 shares already issued
 - 200,000 WR1 shares issued on 28 January 2023
 - 200,000 WR1 shares issued on 28 January 2024
- A 2% Net Smelter Royalty (NSR) over the properties which can be reduced to 1% at any time for a consideration of AU\$1,000,000

Once the final payment of 200,000 WR1 shares is made on 28 January 2024, the 669 claims will transfer to Winsome's Canadian subsidiary.

The Company also has the ability to accelerate the acquisition at any point within the next 24 months and have the claims transferred immediately by issuing all shares due to Mr Griesbach.

This option agreement gives Winsome flexibility to have exclusive exploration rights over a large area in a highly prospective lithium region without having to commit the full purchase price until field exploration work can be carried out to confirm the presence of mineralised pegmatites.

Decelles Geology and Exploration

The consolidated rocks of the region are of Precambrian age. The oldest include weathered rocks of sedimentary origin and a few of volcanic origin which are considered part of the Pontiac group. Pegmatites and associated aplites have varying textures and reportedly are abundant in the region. Most pegmatites are massive, a few are banded, and others are folded and appear as streaks.

The general north-east orientation of the topographic features of the eastern part of the region is controlled by the granite and pegmatite sills in the biotite schists.

There are many north, north-east and north-west trending joints in all the rocks of the region. Horizontal joints are common in pegmatites (see Figure 2).

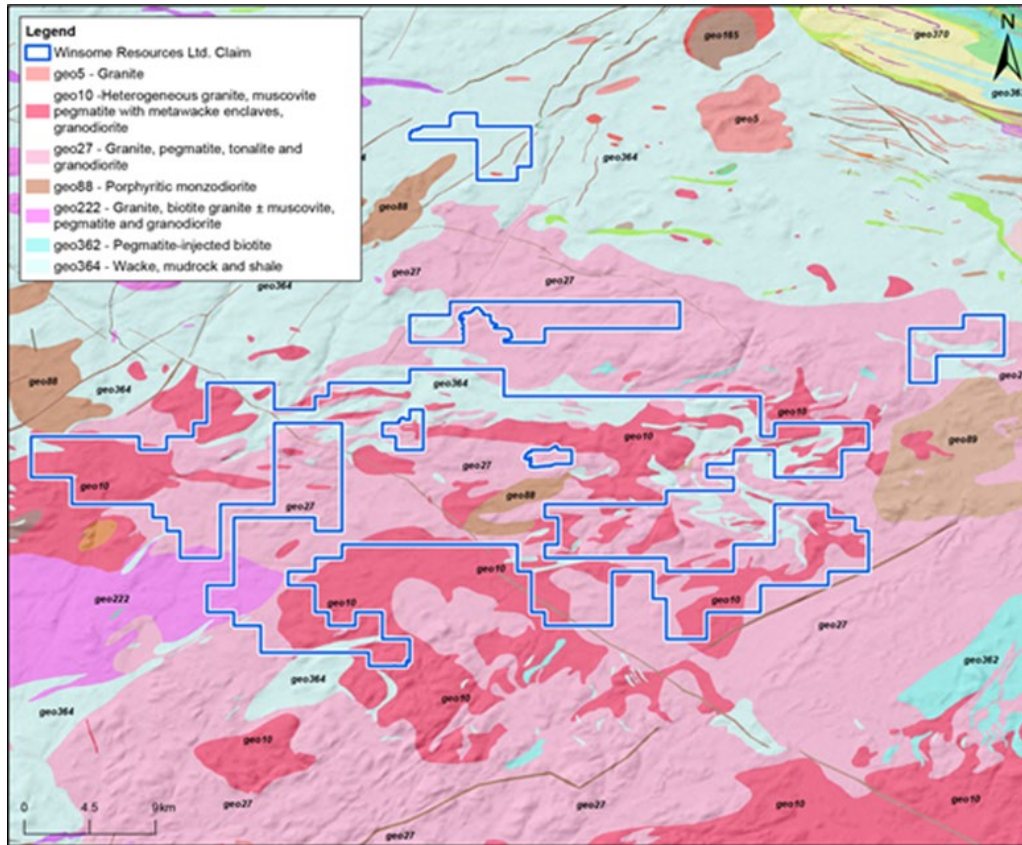

Figure 2 – Decelles regional geology

From earlier intermittent surveys conducted in the 1950s-60s, the presence of spodumene has been reported in the region, but not in sufficient quantity to sustain systematic exploration at the time.

Recently, Vision Lithium Inc purchased the Cadillac claims, which are located immediately north of the Decelles project. Vision has discovered high-grade lithium through channel sampling and has commenced a maiden drill program. There has been a number of other claims staked nearby recently (see Figure 3).

Winsome commenced immediate exploration of Decelles, with desktop mapping of granitic outcrops based on the extensive historical and public data available on the area, followed by a winter field visit to inspect access ways and prepare for a summer field program.

Many of the known granitic outcrops within the claims are extensive, occurring over hundreds of metres, and are easily identifiable on Google Earth (see Figure 4). Further fieldwork will be conducted in the Canadian summer once the snow has melted and more outcrops are visible for mapping and sampling.

Cancel Drilling Program

In mid-March 2022, Winsome commenced a winter drill program at its flagship Cancel Project, with the twin objectives of conducting infill drilling on the existing mineralised pegmatite ore body and testing extensions to the ore body identified through geophysical mapping and interpretation. The program aimed to build on two previous drilling campaigns conducted at the Cancel property in 2017 and to increase QAQC level of drilling data. The outcome aims to confirm the previous high-grade intersections, increase the Company's understanding of the pegmatite orebody and provide quality data for resource calculation in the future.

The drill program was completed in four weeks (ending post quarter) by RJLL Drilling, diamond drilling a total 2,142m across 23 holes. Additionally, the Company has employed SGS Geological Services for geology support during the campaign (refer to ASX announcement dated 14 December 2021). Winsome is also actively recruiting for inhouse geologists and exploration support staff to assist with this campaign, ongoing fieldwork and future drilling campaigns.

Figure 5 below shows the existing pegmatite ore body in beige, overlaid by the magnetic survey lines. The red line areas represent magnetic anomalies and correspond well to the known pegmatites as well as other nearby anomalies. New drill holes are shown as white squares.

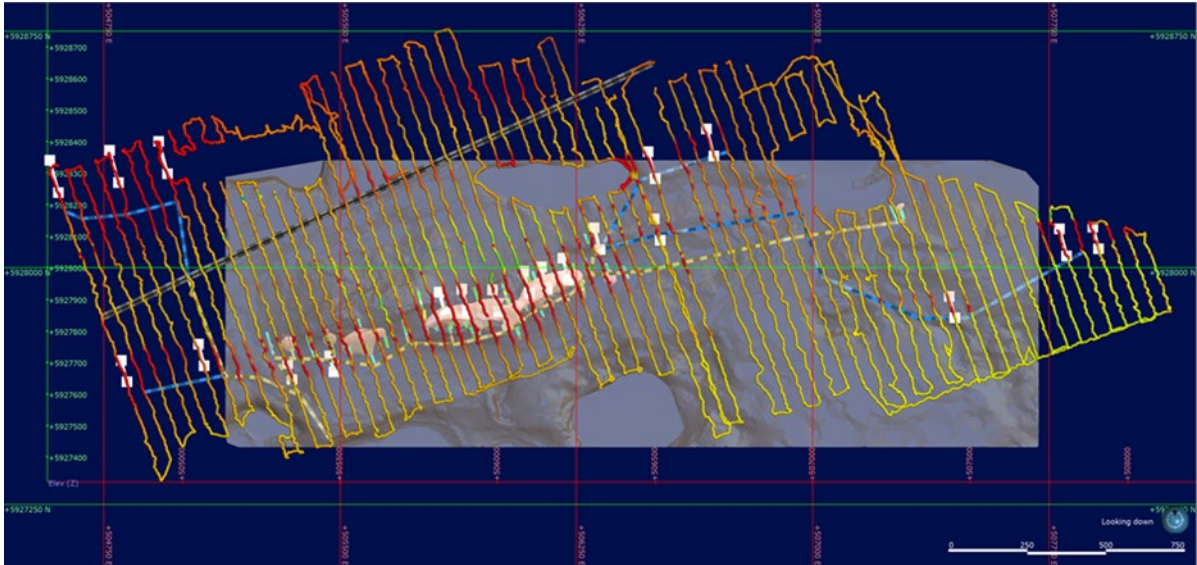

Figure 5 – Planned drill holes in white overlaid by Magnetic Survey results

The first week of the Company's drilling program resulted in the drilling of six holes, with large, visible spodumene crystals detected in the pegmatites encountered at that point (see Figures 6 and 7).¹

¹ Refer to Winsome Resources ASX announcements dated 29 March 2022 and 31 March 2022

Figure 7 – Spodumene crystals are visible in pegmatites detected in initial drill core

Post-Quarter, the drilling campaign was completed around mid-April 2022, with simple logging and sample preparation occurring on site, after which it was progressively transported to the Company's base of operations in Rouyn before being sent to the SGS laboratory in Lakefield, Ontario for assays. The assay results are expected to take around four to six weeks

Cancel Geophysical Targeting

In late March 2022, the Company commenced ground gravity surveying at its Cancel Project.

The Company engaged local geophysical services provider Abitibi Geophysics to complete the initial two-week program under the supervision of Perth-based geophysical consultancy NewGen Geo Pty Ltd. The program was completed post Quarter.

The detailed ground gravity survey focused on providing an indication of possible extensions of the mineralised Cancel pegmatites at depth. It also aimed to validate the applicability of the gravity technique as an exploration tool for lithium-bearing pegmatites across the Company's concessions in northern Quebec.

Winsome's recent review of regional magnetic data from SIGÉOM (the Quebec Government geomining information system) has highlighted numerous analogous magnetic anomalies. These are believed to be indicative of other previously unrecognised gabbroic sills and potential favourable sites for additional pegmatite intrusion.

The gravity survey results, along with previous magnetic and lidar survey data, will be used to identify targets for the summer field exploration campaign due to start in late May / early June 2022 once the majority of snow has sufficiently melted.

HEALTH, SAFETY AND COVID

The Cancet winter drilling campaign and gravimetric survey work involved a total of 3,500 work hours, including travel to and from site at the beginning and end of each shift (approximately half of these total hours were post quarter). Winsome is very pleased to report that all hours were completed incident free, with all contractors and employees finishing the winter campaign in a safe manner.

Journey Management plans, Safety Management Systems and sound communication protocols between Winsome staff, contractors and consultants remain the key tools to ensuring all personnel return home safely at the end of each job.

All work is conducted both in Australia and Canada within respective government guidelines to minimise the likelihood of COVID transmission and infection. The Company has a COVID vaccination policy that complies with relevant government guidelines.

CORPORATE ACTIVITIES

During the Quarter, various activities were undertaken at a Corporate level with a view to enhancing investment opportunities, managing costs, and establishing and growing strategic relationships. These included:

- **Alternate listings**

In January 2022, the Company successfully applied for and was accepted for listing on the Frankfurt Stock Exchange (FSE), trading under the code **4XJ**. By listing on the FSE, the Company broadened its shareholder base accessing new markets and increasing general liquidity of its shares. The company also applied to be listed on the **Over the Counter (OTCQB)** Venture Market exchange, which will further increase exposure and trading of Company shares in North America. Formal listing on the OTCQB is pending.

- **Unmarketable Parcel Facility**

In February 2022, the Company announced a share sale facility for holders of less than a marketable parcel (defined in the ASX Listing Rules as a parcel of securities with a market value of less than AU\$500) of Company shares. This aimed to assist holders of a less than marketable parcel to sell their shares without having to use a broker or pay a brokerage fee. It also aimed to reduce the administrative costs associated with maintaining large numbers of very small holdings. The facility was completed post-Quarter, in April 2022.

- **Promotional**

The Company registered for two Battery Materials focused conferences during the Quarter to promote the Company's projects and to meet strategic investors. These were the **Mines and Money Online Connect** event on 4-5 April and the **Paydirt Battery Minerals Conference** in Perth on 6-7 April 2022. A video of the panel discussion that Managing Director, Chris Evans, participated in can be accessed here [RK Equity Presents! Mines & Money w/ Winsome Resources, & Luna Lithium - YouTube](#)

- **Strategic Meetings**

A number of strategic meetings were held during the Quarter to further advance the Corporate aims of the Company. These included:

- (i) Meeting with representatives of the Northern Quebec Regional Directorate for the Department of Energy and Natural Resources to discuss project details. This meeting was held in the regional mining town of Chibougamau in Quebec and resulted in a planned site visit to the project areas with Government representatives in early June 2022. This will enable the Company to forge a strong relationship with the relevant regulatory mining authorities and better understand the development and approval requirements associated with the projects.
- (ii) Discussions with First Nations Cree representatives regarding the Company's exploration activities at Cancet. This was done remotely due to ongoing COVID restrictions within the Cree Wemindji Community, however an in-person meeting is scheduled during the upcoming PDAC conference, taking place in Toronto in June 2022.
- (iii) As a result of attendance at the above-mentioned conferences, a number of discussions were held with potential strategic partners interested in securing some of the rights to future production at the Company's projects. These discussions remain at an early stage however the Company looks forward to assessing any potential strategic partnership based upon the value it is likely to bring to shareholders.

- **Office relocation**

The Company secured a new office space located with the main office of its corporate/IR advisors (Spoke Corporate) to reduce overhead costs and enhance synergies by working in the same location.

- **Exploration Equipment**

The Company acquired and subsequently employed, new equipment and facilities including skidoo, company truck, small safety equipment and field prospecting gear as well as a base of operations in Rouyn-Noranda, Quebec. This is the first step towards the Company developing an in-house exploration and geological capability in Quebec.
