Greener Battery Materials

Corporate Presentation | May 2022

ASX Code: **NMT** | AIM Code: **NMT** | Frankfurt: **9R9** | OTC Code: **RDRUY**

Authorised for release by Christopher Reed,

Managing Director of Neometals

DISCLAIMER

Summary information:

This document has been prepared by Neometals Ltd (“Neometals” or “the Company”) to provide summary information about the Company and its associated entities and their activities current as at the date of this document. The information contained in this document is of general background and does not purport to be complete. It should be read in conjunction with Neometals’ other periodic and continuous disclosure announcements lodged with the Australian Securities Exchange, which are available at www.asx.com.au.

Forward-looking information:

This document contains, opinions, projections, forecasts and other statements which are inherently subject to significant uncertainties and contingencies. Many known and unknown factors could cause actual events or results to differ materially from the estimated or anticipated events or results included in this document. Recipients of this document are cautioned that forward-looking statements are not guarantees of future performance.

Any opinions, projections, forecasts and other forward-looking statements contained in this document do not constitute any commitments, representations or warranties by Neometals and its associated entities, directors, agents and employees, including any undertaking to update any such information. Except as required by law, and only to the extent so required, directors, agents and employees of Neometals shall in no way be liable to any person or body for any loss, claim, demand, damages, costs or expenses of whatever nature arising in any way out of, or in connection with, the information contained in this document.

Financial data:

All figures in this document are in Australian dollars (AUD) unless stated otherwise.

Not financial product advice:

This document is for information purposes only and is not financial product or investment advice, nor a recommendation to acquire securities in Neometals. It has been prepared without taking into account the objectives, financial situation or needs of individuals. Before making any investment decision, prospective investors should consider the appropriateness of the information having regard to their own objectives, financial situation and needs and seek legal and taxation advice appropriate to their jurisdiction.

Investment risk:

An investment in securities in Neometals is subject to investment and other known and unknown risks, some of which are beyond the control of Neometals. The Company does not guarantee any particular rate of return or the performance of Neometals. Investors should have regard to the risk factors outlined in this document.

Compliance Statement:

The information in this document that relates to the Mineral Resource Estimate for the Barrambie VTM Project has been extracted from the ASX Release set out below, which is available at www.neometals.com.au

17/04/2018 Barrambie Project – Mineral Resource Update

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters underpinning the estimates in the market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcements.

EXECUTIVE SUMMARY

Neometals

Neometals is an emerging, sustainable battery materials producer.

3 business units supporting energy transition in the EV / ESS supply chains:

1. Li-ion Battery Recycling (Ni/Co)
2. Vanadium Recovery
3. Lithium Chemicals

Underpinned by proprietary, green, processing technologies

- 16 Granted Patents
- 54 Patents Pending

ESG commitment. Recycling and recovery minimise reliance on mined materials and reduce carbon footprint

Focus on continuous development and innovative commercialisation with strong partners

Strong, growing team with track-record of value creation, project execution and shareholder return.

CORE BUSINESS SNAPSHOT

TWO PROJECTS REACHING FID IN 2022

Technology

Partners

Projects

Lithium-ion Battery Recycling

50:50 Incorporated JV **Primobius**

Mercedes-Benz

FID: 50tpd – SepQ 22

CAPEX: US\$165m⁽¹⁾

OPERATIONS:
2H 2023

Vanadium Recovery

Personal use only

FLEXIBLE BUSINESS MODELS

MULTIPLE REVENUE GENERATION OPPORTUNITIES VIA FLEXIBLE OPERATING MODEL

- Target industrial-scale feed volumes direct from OEMs
- Primobius JV to execute global rollout
- Primobius underpinned by large delivery partner (SMS group) with ability to guarantee plant performance

1

Primobius to responsibly process production scrap or EOL batteries for a fee. Customer option to purchase all products under offtake agreement.

2

Primobius to build and operate recycling plant(s) both share economic returns – JV etc. Partner option to purchase all products under offtake agreement.

3

License IP directly for royalty and potentially EPC recycling plant(s).

STATUS - COMMERCIAL PIPELINE

FIRST SHREDDING COMMERCIAL OPERATIONS PENDING H1 2022.
PIPELINE OF ADDITIONAL COMMERCIAL OPPORTUNITIES MATURING

		Commercial Operations				
		 Battery recycling without limits		 The Steel Company of Canada	 Battery recycling without limits	
		 10t/d Shredder	 10t/d Integrated*	  50t/d Integrated	 50t/d Integrated	 50t/d Integrated

 Status	Production Ready	Front End Engineering FEL 1	Front End Engineering FEL 2 (Shredder)	Class 3 Engineering Cost Study	Demonstration Trials	Demonstration Trials
 Location/s	Hilchenbach Germany	Kuppenheim Germany	Hamilton Works Canada	Germany	Japan	Japan
 Business Model	Principal	Limited Royalty-Free R&D License	License & JV Option	Principal/JV	MOU for JV	MOU for JV

1. BGMS = Battery Grade Metal Sulphates

*For full details refer to Neometals ASX release dated 13th May 2022 titled "Cooperation with Mercedes-Benz "

MERCEDES-BENZ

COOPERATION AGREEMENT WITH MERCEDES-BENZ (LICULAR GMBH)*

- Primobius selected to provide LICULAR engineering, supply and installation of equipment for a 2,500tpa Recycling Plant;
- Primobius will enter into a long-term research and development collaboration to recycle next generation cell formats and chemistries;
- Primobius to provide a non-exclusive technology licence, know-how, staff training, engineering support and plant management support to LICULAR; and
- Primobius and LICULAR to jointly evaluate an industrial-scale operation using Primobius' recycling technology and during the Recycling Plant operations period.

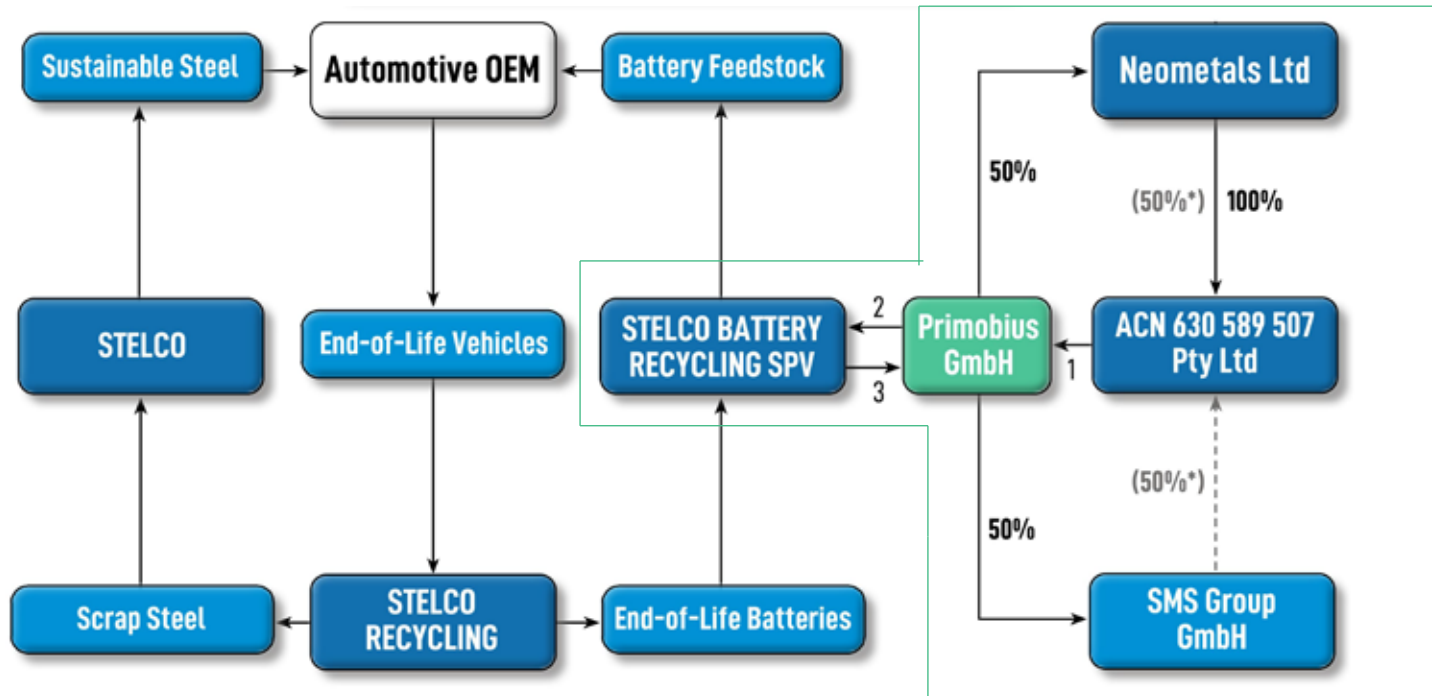

*For full details refer to Neometals ASX release dated 13th May 2022 titled "Primobius Executes Cooperation Agreement with Mercedes-Benz"

STELCO

TECHNOLOGY LICENSE AND JV OPTION (≤50%) WITH STELCO IN NORTH AMERICA*

- Steel Company of Canada (Stelco) transitioning to EAF production (greener steel)
- EAF needs scrap steel, EOL vehicle recycling is key source of scrap feed for Stelco
- More EOL vehicles are EV, lithium batteries require recycling, OEM's want to close the loop

1. ACN 630 grants limited Commercial licence
2. Primobius to sublicense to Stelco Battery Recycling SPV (10% GSR)
3. SPV grants Primobius option to acquire 25-50% of SPV in consideration for GSR 0% + reimbursement (sunk costs to date - evaluation costs etc)

* SMS will be issued new shares upon 'Commercial Operations' by Primobius

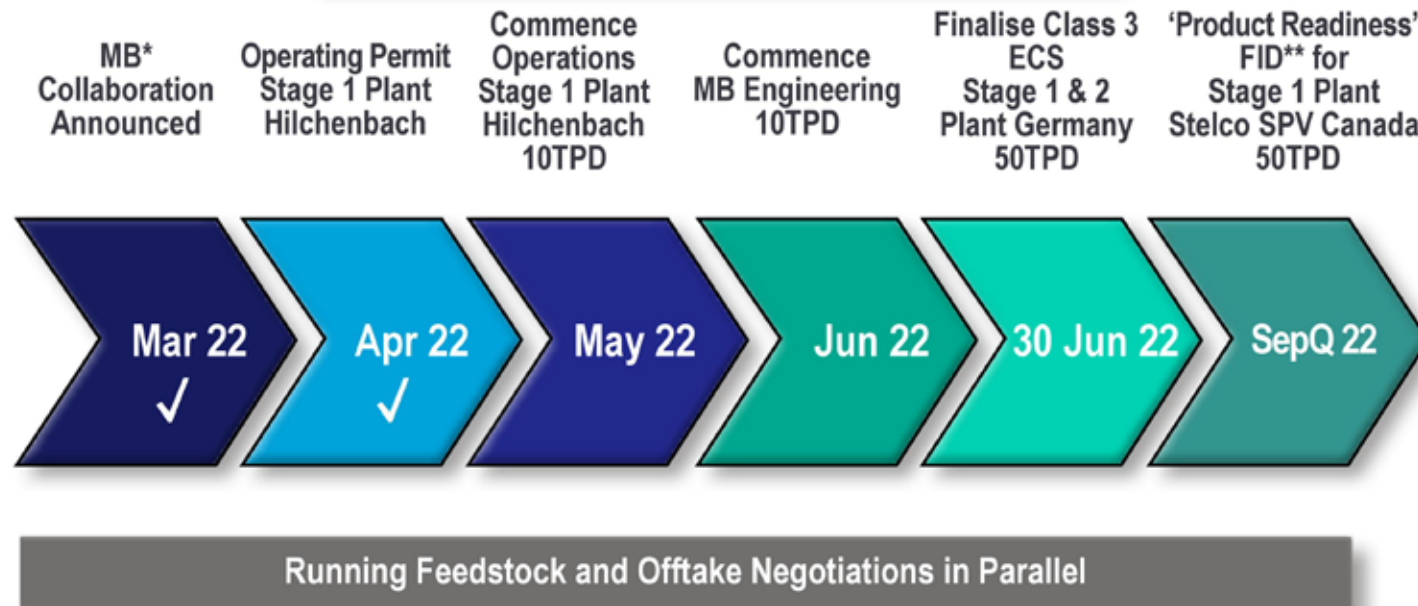

*For full details refer to Neometals ASX release dated 31st December 2021 titled "Battery Recycling - Binding Agreements with Stelco for NA"

INDICATIVE TIMELINE

DEMONSTRATION TRIALS FOR FEASIBILITY COMPLETE AND AACE CLASS 3 ENGINEERING COST STUDY FOR 50TPD INTEGRATED (STAGE 1 & 2) OPERATION ON TRACK FOR COMPLETION BY END OF JUNE 2022

Indicative Project Timeline - LiB Recycling

*Mercedes-Benz, Licular GmbH Project ** Subject to Board Approval and Primobius Board Approvals.

INVESTMENT CASE

LITHIUM-ION BATTERY RECYCLING

- 1 Auto OEMs and Batterymakers Require a LiB Recycling Solution**
Global volume of 'end of life' LIBs available for recycling expected to grow at 18.8% per annum over the next ~10 years⁽¹⁾. Highlighted by Stelco whole of vehicle recycling business model.
- 2 Environmentally Friendly Process Differentiated from Incumbent Technology –16 National Phase Patents pending**
Hydromet process has a negligible CO₂ emission footprint compared to primary minerals extraction or the incumbent pyromet recycling process for Li-B batteries
- 3 Flexible and Robust LiB Recycling Technology**
Multiple battery chemistries, formats and types can be processed with lower emissions and less transport required than pyrometallurgical incumbents.
- 4 Attractive Economics and Exposure to Battery Metal Prices**
High purity chemicals not intermediates for ethical supply to the cathode producer supply chain with better recovery and lower emissions than pyrometallurgical incumbents
- 5 SMS Partnership and Flexible Business Plan Attracting OEM Partners**
SMS operational and manufacturing capability applied to a flexible business model provides a material speed to market advantage. Technology and business model validation from brand names like Mercedes and Stelco

VANADIUM

Vanadium Recovery Process Technology
100% Neometals

Vanadium Recovery Project 1 - Finland
Evaluating a 50:50 Incorporated
JV with Critical Metals Ltd

ISSUE

- EU in supply deficit and totally reliant on Russian feedstock
- World reliant on Chinese production but it is a net importer!

Annual Vanadium Production & Consumption, Europe (excl Russia)

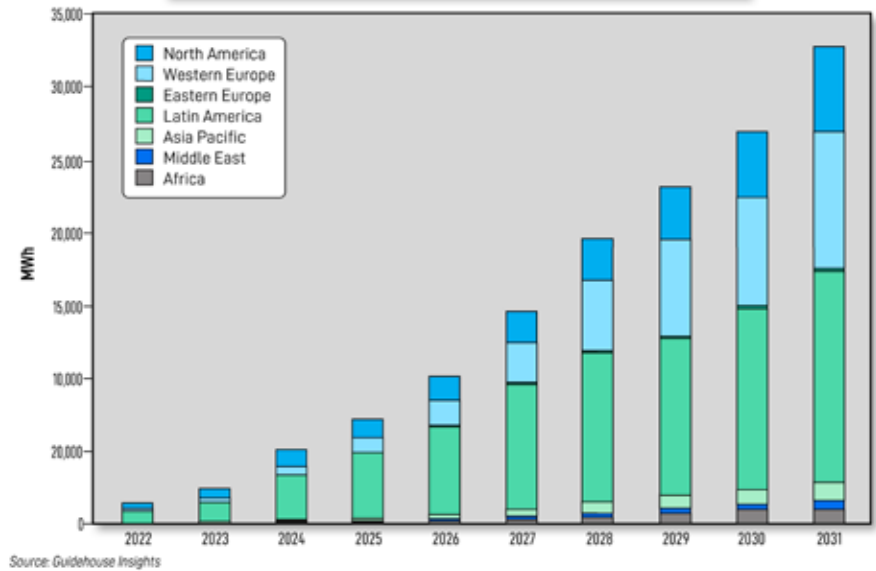

Vanadium Production by Country 2020

NEED

- EU domestic sustainable sources of this critical battery material
- Low or zero carbon supply footprint required by EU
- High purity material in volumes for VRB and LiB applications

Annual Installed VRFB Utility-Scale & Commercial & Industrial Battery Deployment Energy Capacity by Region

NEOMETALS SOLUTION

UNIQUE VANADIUM RECOVERY PROCESSING TECHNOLOGY TO SUSTAINABLY PRODUCE HIGH-PURITY GRADE VANADIUM WITH LOWEST CARBON FOOTPRINT

- Utilise stockpiled by-product of the Scandinavian steel industry
- Unique (EU patent pending) hydrometallurgical process which can utilise captured CO₂ from local emitters as primary leaching reagent
- Can permanently chemically sequester CO₂ in tailings product, potential for use in building products as inert filler.
- Potential for negative/zero carbon production of battery-grade material
- Conventional equipment configured in a fully piloted novel process

CURRENT STATUS

SUCCESSFUL PILOT TRIALS COMPLETE, PROCESSING SITE SECURED,
FEASIBILITY STUDY NEARING COMPLETION, MOU FOR BY-PRODUCT OFFTAKE

PROJECT 1 – PORI, FINLAND (VRP1)

- Neometals funding evaluation to FID for the recovery of vanadium using NMT's proprietary eco-friendly hydromet process and developing as a 50:50 Incorporated JV with Critical Metals Ltd
- Supply Agreement with Scandinavian steel giant SSAB for $\geq 2\text{Mt}$ of high-grade vanadium-bearing by-product (“Slag”)

PROJECT 2– BODEN, SWEDEN (VRP2)¹

- MoU⁽¹⁾ with H2 Green Steel (future green steel producer) to evaluate second, larger, vanadium production operation

⁽¹⁾ H2GS MoU is non-binding. For full details refer to ASX release dated 13th September 2021 titled “H2GreenSteel MOU for 4 Mt High-Grade Slag”

ROBUST FINANCIAL METRICS – NO MINING RISK

SALE OF HIGH PURITY V TO BATTERY INDUSTRY PLUS BY-PRODUCTS TO INDUSTRIAL APPLICATIONS. SUPPORTED BY LOWEST QUARTILE COSTS AND ESG CREDENTIALS

 THROUGHPUT RATE	 PRODUCTS	 OPEX	 CAPITAL COSTS
200,000tpa	13.43M lbs p.a. High purity zero carbon V ₂ O ₅	US\$4.25/lb	US\$183.4M
 NPV10⁽¹⁾	 IRR⁽¹⁾	 PAYBACK⁽¹⁾	
US\$230.5M	31.2%	<4 years	

Source: TTP Squared – Cost Curve, Neometals Management – Mineral Concentrate grades for select vanadium producers market as “O”

⁽¹⁾ All figures expressed on a 100% ownership and pre-tax basis. For further information, refer to ASX release dated 4th May 2021 – “Vanadium Recovery Project - Outstanding PFS Results” and the assumptions set out therein. Page 3 of the announcement contains the financial summary which is the source of the throughput rate, production rate, operating costs (“OPEX”), initial capital costs, pre-tax net present value using a 10% discount rate (“NPV10”) and pre-tax payback period. The internal rate of return was calculated by Neometals Management.

BUSINESS / REVENUE MODEL

FLEXIBLE GROWTH MODEL WITH MULTIPLE POTENTIAL REVENUE STREAMS

1

V Products

Produce high-purity Vanadium Pentoxide (V_2O_5) targeting EV/ESS supply chain from SSAB, H2 Green Steel and other third-party feeds

2

By Products

LOI with Betolar to offtake SSM for 'Geoprime' building products, carbon credits from permanently sequestered CO_2 and small volume sales of sodium sulphate by-product

3

License

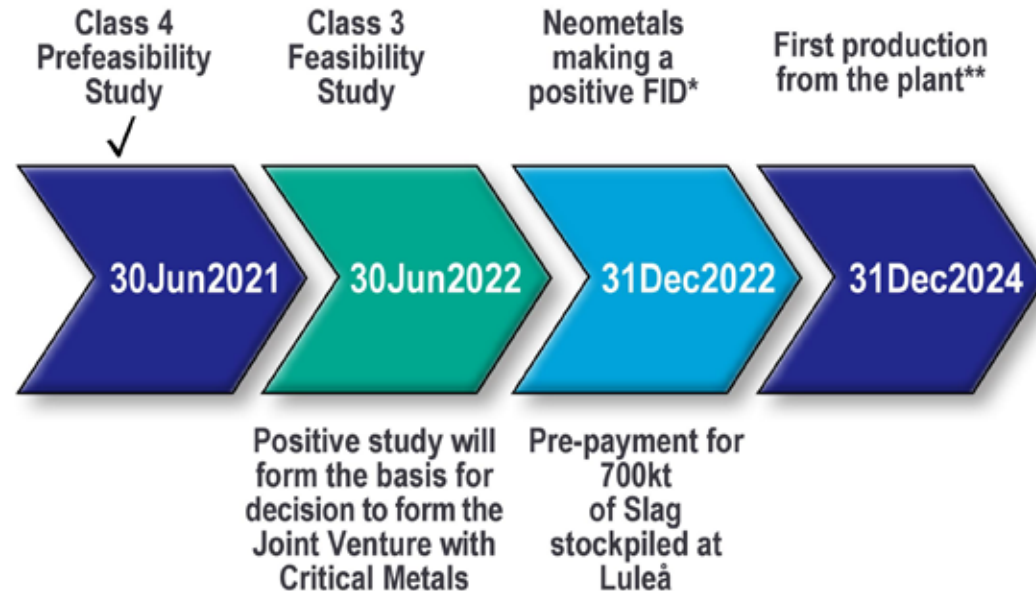

Licensing IP directly for royalty to Critical Metals JV and third-party steelmakers

INDICATIVE TIMELINE

FUNDED TO FID. CLASS 3 FEASIBILITY AND CUSTOMER PRODUCT TRIALS UNDERWAY IN PARALLEL WITH ENVIRONMENTAL PERMITTING IN FINLAND

Indicative Project Timeline - Vanadium Recovery Project

* Subject to successful studies and Neometals/Critical Metals Board Approval. ** Subject to FID, approvals, finance

INVESTMENT CASE

VANADIUM RECOVERY

1

Strong Fundamentals for low-carbon Vanadium in EU

Forecast supply / demand imbalance for Vanadium with demand upside from new lithium vanadium battery cathode chemistries and Vanadium redox flow batteries

2

Piloted, environmentally-friendly Technology – PCT/EU patents pending

Pilot plant produced high-grade V₂O₅ powder (exceeding 99.5%) using a process which utilises carbon as major reagent and can sequester carbon in by-product.

3

Secure Feedstock for first commercial operation

10 year, minimum 2 million tonne purchase agreement with leading Scandinavian steel maker SSAB.

4

Robust Economics and Cost Position

PFS incorporating an AACE Class 4 engineering confirms superior project economics and the projects 1st quartile cost of production. Economics strongly supported by vanadium grades in Slag stockpiles

5

Significant Future Growth Potential from Additional Sites

MoU signed with H2GS AB for a second larger Vanadium Recovery Project – Boden, Sweden. Testing third party feedstocks ex-EU

KEY CATALYSTS

NEOMETALS IS APPROACHING MULTIPLE FID'S WITH BUSY PERIOD OF CATALYSTS

Lithium-ion Battery Recycling

2H22:

- ECS 50tpd integrated
- 10tpd Mercedes shredder PO
- 50tpd Stelco shredder FID* (inc. option exercise)

1H23:

- 10tpd Disposal Plant at full capacity
- 10tpd Mercedes refinery PO*
- 50tpd Stelco SPV refinery FID*

2H23:**

- Mercedes 10tpd shredder operational
- 50tpd Stelco shredder operational

Vanadium Recovery

2H22:

- Feasibility Study Results
- FEED Study
- Offtake/Debt Term Sheets
- VRP1 FID* and Slag prepayment

1H23:

- Detailed Design Study
- Commence site works
- Order lead items
- Complete Slag Storage Facilities

2H23:**

- Commence Slag Shipping
- Commence construction

Lithium Chemicals

2H22:

- Class 3 ECS
- Pilot Plant Engineering & Procurement

1H23:

- Install Pilot Plant
- Commence Pilot Trials
- Decision to commence Class 2 FEED Study

2H23:**

- Complete Class 2 FEED Study
- FID to formalise Bondalti JV*

Note: partner negotiations, offtake and feed arrangements will be run in parallel with the above

** Subject to successful studies and Neometals/partner Board Approvals*

*** Subject to FID, approvals and finance*

SUSTAINABILITY

Neometals is committed to optimising finite resources with circular practices to benefit society and the environment for a sustainable future.

- Focus on production of sustainable battery materials - reducing reliance on mining with recovery and recycling
- Commercialising internationally recognised sustainable processing technologies
- Transparent reporting to GRI, SASB, TCFD..
- 3rd report in progress

ersonal use only

COMPANY HIGHLIGHTS

NEOMETALS IS AN ATTRACTIVE INVESTMENT

Growing portfolio of **ESG-aligned, sustainable** battery materials businesses with near-term decision points

Proprietary green processing technologies underpin low-cost, low-carbon product

Clear **strategy** to commercialise with proven partnering business model

Strong balance sheet, fully funded to to key investment decisions

Strong team with **track record** and commitment to **green circular economy** principles

Strong organic **growth** potential (size and scale) from pipeline of opportunities to deploy as principal, partner or technology licensor – whatever customer needs

LITHIUM CHEMICALS

ELi[®] Processing Technology

Reed Advanced Materials (“RAM”)

70% Neometals / 30% Mineral Resources Ltd

Lithium Chemicals Project - Portugal

Co-funding evaluation of 50:50 JV with

Bondalti Chemicals SA using ELi[®] Process

NEED

LITHIUM NON-SUBSTITUTABLE IN LIB
 EU HAS NO OPERATING LITHIUM DEPOSITS
 LARGEST CONTRIBUTOR TO CO2 FOOTPRINT OF LIB

OPPORTUNITY

DEPLOY PROPRIETARY PATENTED ELI PROCESS INTO EUROPE WITH STRONG LOCAL PARTNER

- Grow global lithium production from lithium chloride (brine) deposits in South America, largest known resources and lowest carbon intensity
- ELi Process uses electrolysis to convert lithium chloride into battery-quality lithium hydroxide, replaces traditional carbon-intensive reagents with electricity in conventional chlor-alkali cells

SOLUTION

UTILISES OFF-THE-SHELF CHLOR-ALKALI ELECTROLYSERS

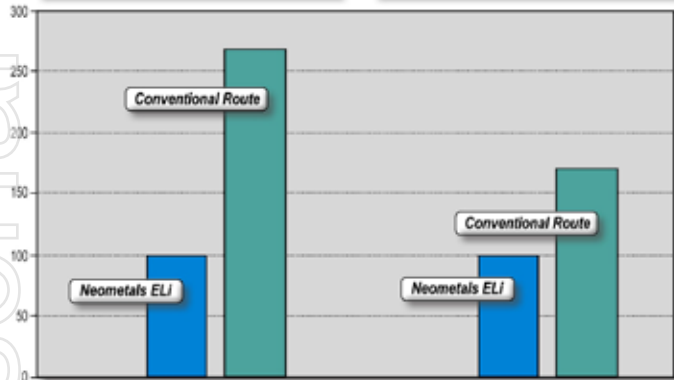

BATTERY QUALITY LITHIUM CHEMICALS, NO IMPORTED SODA ASH/CAUSTIC SODA

CAN UTILISE RENEWABLE POWER AND SEQUESTER CARBON

SIGNIFICANT OPERATING AND CAPITAL COST ADVANTAGES

Relative LiOH Conversion Costs from LiCl Brine
(US\$ per tonne LiOH.H₂O) - Argentina basis
ELI Process = Base 100

Source: Valtech (2018)

Capital Efficiency (US\$/production tonne LHM per annum)

Source: Orocobre, Lithium Americas, E3 Metals Company Reports, Eytle CLJ Engineering Cost Study (2018)

BONDALTI PARTNERSHIP

LEVERAGE BONDALTI'S STRONG EXPERIENCE IN CHLOR-ALKALI

EXTENSIVE INFRASTRUCTURE ENABLES FAST-TRACK EVALUATION AND PILOTING AT THEIR ESTARREJA CHEMICAL SITE

Bondalti:

- Largest Portuguese chemical producer - based in Estarreja chemical cluster
- Seeking entry into LiOH production using its chlor-alkali process infrastructure
- Production synergy for ELi[®] to ship H₂ and Cl₂ by-products "over the fence"
- Experienced and competent industrial operator of same type of chlor-alkali plant used for ELi[®]

Cooperation*:

- Binding cooperation to pilot ELi[®] and evaluate future 50:50 JV to produce LiOH for European auto value chain
- RAM would issue the JV a royalty free license to the technology
- Equal co-funding on pilot and evaluation activities

*For further information, refer to ASX release dated 13th December 2021 – "Agreement to Commercialise ELi Lithium Process in EU"

STATUS / NEXT STEPS

FUNDED THROUGH PILOT PLANT TO CLASS 2 FEED STUDY

Indicative Timeline - Bondalti ELi[®] Cooperation

** Subject to Steering Committee approvals*

INVESTMENT CASE

ELi[®] LITHIUM PROCESS

- 1 Unique Technology with 12 granted patents and 18 pending**
Technology well guarded. Importantly the process has been proven at semi-pilot scale and supported by Feasibility Study economic evaluation.
- 2 Significant operating and capital cost advantage**
Recovery and regeneration of key reagents on site eliminates expensive imports
- 3 Compelling environmental benefits to reduce CO₂ footprint**
Potential for significant reduction carbon footprint due to shift in primary reagent to electricity and elimination of carbon intensive transportation of feedstocks and reagents, potential for additional savings with renewable power
- 4 Strong partner to scale up and commercialise in EU**
Bondalti is Portugal's largest chemical business in with extensive chlor alkali experience, and plant that can be repurposed to produce lithium hydroxide,
- 5 Flexible business models that can be replicated globally**
Neometals (through RAM) can deploy globally (ex-EU) as principal, in partnership with, or licence to lithium developers/producers for royalty stream

BARRAMBIE TITANIUM AND VANADIUM

Barrambie Titanium and Vanadium Project
100% Neometals

NEED & OPPORTUNITY

CHINA IS HALF WORLD MARKET AND SWITCHING TITANIUM PIGMENT PRODUCTION TO MORE SUSTAINABLE CHLORIDE PROCESS

WORLD SUPPLY OF QUALITY CHLORIDE FEEDSTOCKS IN DECLINE, PRICES STEADILY INCREASING FOR LAST 5 YEARS

- Chloride Pigment production requires high-grade feedstocks such as rutilites, high quality ilmenites and high-grade titanium slags
- Primary mineral sands (rutile, ilmenite) deposits are being depleted, smelting of hard-rock titanium concentrates from Rio and China set benchmark prices
- Barrambie is one of the highest-grade hard rock Titanium assets globally¹
- Key mining/construction permits in place
- Working with Chinese partners to realise and optimise value² from production

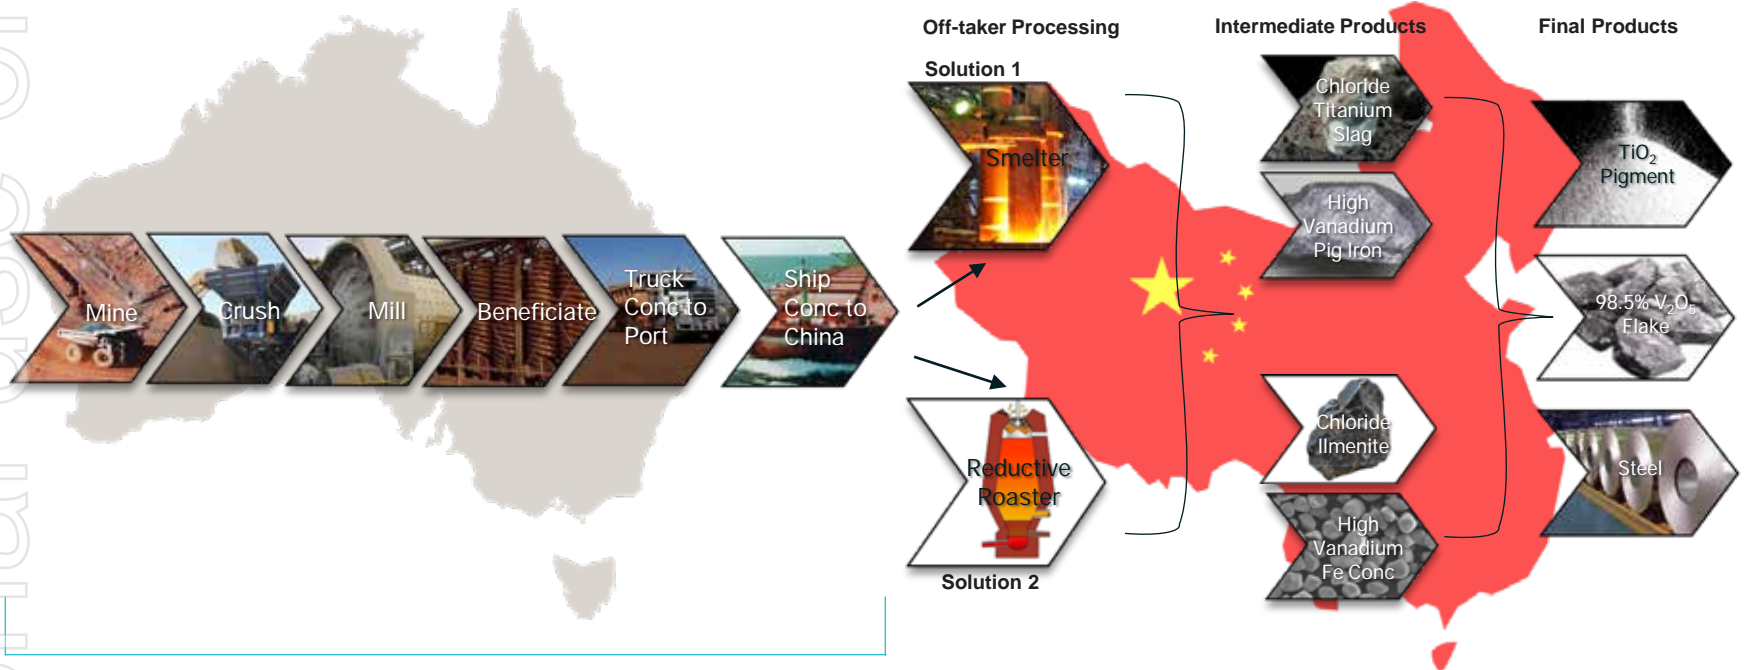

Source: TZMI Price Forecast May 2021; TZMI Supply Demand Forecast August 2021

1. See Barrambie Mineral Resource Estimate on slide 44.
2. For further details of commercial partnerships via MOU please see: ASX release of 16/4/2021 titled "Barrambie - MOU for Cornerstone Concentrate Offtake" and ASX release of 4/10/2019 titled "MOU for JV to develop Barrambie"

NEOMETALS SOLUTION

SIMPLE TRUCK AND SHOVEL MINING FOLLOWED BY GRAVITY SEPARATION TO PRODUCE MIXED CONCENTRATES FOR EXPORT TO CHINA FOR SMELTING OR FURTHER REDUCTION TO PRODUCE SEPARATE ILMENITE AND VANADIUM CONCENTRATES

Neometals activities to prepare mineral concentrates for sale

STATUS / NEXT STEPS

MOU FOR POTENTIAL 50:50 JV OPERATING JV WITH IMUMR¹ (CHINA)

MOU FOR OFFTAKE WITH TITANIUM SLAG PRODUCER JIUXING TITANIUM²

COMPLETING PFS TO BENCHMARK NEGOTIATIONS FOR BUILD-OWN-OPERATE CONTRACTORS

Indicative Project Timeline - Barrambie Mixed Gravity Concentrate Route

* Subject to successful Jiuxing trial, positive PFS and Board approval

1. for full details refer to ASX announcement entitled "MOU for JV to develop Barrambie" released on 4th October 2019

2. for full details refer to ASX announcement entitled "Barrambie - MOU for Barrambie Concentrate Offtake" released on 16th April 2021

INVESTMENT CASE

BARRAMBIE PROJECT

1 Strong Demand/Supply Fundamentals for Titanium

China is transitioning from sulphate to more environmentally friendly and sustainable chloride titanium production, so securing access to cleaner, higher grade chloride feedstock is a strategic imperative.

2 Large, High-Grade Resource¹ in Tier 1 Jurisdiction

One of the World's highest grade hard-rock titanium assets¹ with revenue upside from vanadium rich iron by-products. \$37M spent over +15 years.

3 'Mine-ready'

Granted mining proposal and Ministerial Approval to construct 3.2Mtpa concentrator MoUs with Chinese partners for potential operating JV and separate take-or-pay offtake

4 Capital Light Development Strategy

Potential BOO/T mining and concentration in Australia with intermediate product exported to China

5 Proven Partnering Business Model

Track record of working with partners to de-risk and deliver project execution outcomes with strong returns to shareholders (Mt Marion & Widgie Nickel examples)

1. For full details refer to Neometals ASX release dated 17th April 2018 titled "Barrambie Project - Mineral Resource Update" and Appendix: Barrambie Mineral Resource Estimate on slide 44

MINERAL RESOURCE ESTIMATE

MINERAL RESOURCE ESTIMATE

Global Mineral Resource as at 17 April 2018¹

Classification	Tonnes (M)	TiO ₂ (%)	V ₂ O ₅ (%)
Indicated	187.1	9.61	0.46
Inferred	93.0	8.31	0.40
Total	280.1	9.18	0.44

High Grade V₂O₅ Mineral Resource at (0.5% V₂O₅ cut-off)²

Classification	Tonnes (M)	TiO ₂ (%)	V ₂ O ₅ (%)
Indicated	49.0	16.93	0.82
Inferred	15.9	16.81	0.81
Total	64.9	16.90	0.82

High Grade TiO₂ Mineral Resource at (14% TiO₂ cut-off)²

Classification	Tonnes (M)	TiO ₂ (%)	V ₂ O ₅ (%)
Indicated	39.3	21.18	0.65
Inferred	14.3	21.15	0.58
Total	53.6	21.17	0.63

(1) Based on Cut-off grades of $\geq 10\%$ TiO₂ or $\geq 0.2\%$ V₂O₅

(2) The high-grade titanium and vanadium figures are a sub-set of the total Mineral Resource. These figures are not additive and are reporting the same block model volume but using different cut-off grades

For full details refer to Neometals ASX release dated 17th April 2018 titled "Barrambie Project - Mineral Resource Update"
