Important Notice

This document has been prepared by ADX Energy Ltd for the purpose of providing information to interested analysts/investors and shareholders. Any statements, opinions, projections, forecasts or other material contained in this document do not constitute any commitments, representations or warranties by ADX Energy Ltd or its directors, agents and employees.

Except as required by law, and only to the extent so required, directors, agents and employees of ADX Energy Ltd shall in no way be liable to any person or body for any loss, claim, demand, damages, costs or expenses of whatsoever nature arising in any way out of, or in connection with, the information contained in this document. This document includes certain statements, opinions, projections, forecasts and other material, which reflect various assumptions. The assumptions may or may not prove to be correct. ADX Energy Ltd recommends that potential investors consult their professional advisor/s as an investment in the company is considered to be speculative in nature.

The information in this presentation is in summary form only and does not contain all the information necessary to fully evaluate any transaction or investment. It should be read in conjunction with ADX Energy Ltd's other periodic and continuous disclosure announcements lodged with the ASX. This document does not constitute an offer, invitation or recommendation to subscribe for or purchase any securities and does not form the basis of any contract or commitment.

Persons compiling information about Hydrocarbons. Pursuant to the requirements of the ASX Listing Rule 5.31, the unaudited technical and reserves information contained in this presentation has been prepared under the supervision of Mr Paul Fink. Mr Fink is Technical Director of ADX Energy Ltd, is a qualified geophysicist with 23 years of technical, commercial and management experience in exploration for, appraisal and development of oil and gas resources. Mr. Fink has consented to the inclusion of this information in the form and context in which it appears. Mr. Fink is a member of the EAGE (European Association of Geoscientists & Engineers) and FIDIC (Federation of Consulting Engineers).

An independent audit of developed reserves has been completed for ADX' Zistersdorf and Gaiselberg fields ("Fields") in the Vienna basin, Austria by RISC Advisory Pty Ltd ("RISC"). RISC conducted an independent audit of ADX' field evaluations, including production forecasts, cost estimates and project economics. Production from existing wells is classified as Developed Producing. Production from planned recompletion of the existing wells to new intervals is classified as Developed Non-Producing. RISC is an independent advisory firm offering the highest level of technical and commercial advice to a broad range of clients in the energy industries, worldwide. RISC has offices in London, Perth, Brisbane and South East Asia and has completed assignments in more than 90 countries for over 500 clients and have grown to become an international energy advisor of choice.

Disclaimer Statement (2)

PRMS Reserves Classifications used in this Report

Developed Reserves are quantities expected to be recovered from existing wells and facilities.

Developed Producing Reserves are expected to be recovered from completion intervals that are open and producing at the time of the estimate.

Developed Non-Producing Reserves include shut-in and behind-pipe reserves with minor costs to access.

Undeveloped Reserves are quantities expected to be recovered through future significant investments.

A. **Proved Reserves (1P)** are those quantities of Petroleum that, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be commercially recoverable from known reservoirs and under defined technical and commercial conditions. If deterministic methods are used, the term “reasonable certainty” is intended to express a high degree of confidence that the quantities will be recovered. If probabilistic methods are used, there should be at least a 90% probability that the quantities actually recovered will equal or exceed the estimate.

B. **Probable Reserves** are those additional Reserves which analysis of geoscience and engineering data indicate are less likely to be recovered than Proved Reserves but more certain to be recovered than Possible Reserves. It is equally likely that actual remaining quantities recovered will be greater than or less than the sum of the estimated Proved plus Probable Reserves (2P). In this context, when probabilistic methods are used, there should be at least a 50% probability that the actual quantities recovered will equal or exceed the 2P estimate.

C. **Possible Reserves** are those additional Reserves that analysis of geoscience and engineering data suggest are less likely to be recoverable than Probable Reserves. The total quantities ultimately recovered from the project have a low probability to exceed the sum of Proved plus Probable plus Possible (3P) Reserves, which is equivalent to the high-estimate scenario. When probabilistic methods are used, there should be at least a 10% probability that the actual quantities recovered will equal or exceed the 3P estimate. Possible Reserves that are located outside of the 2P area (not upside quantities to the 2P scenario) may exist only when the commercial and technical maturity criteria have been met (that incorporate the Possible development scope). Standalone Possible Reserves must reference a commercial 2P project.

Prospective Resource Classifications

Best Estimate scenario of Prospective resources - denotes the best estimate of the quantity that will actually be recovered from an accumulation by an oil and gas project. It is the most realistic assessment of recoverable quantities if only a single result were reported. When probabilistic methods are used, there should be at least a 50 % probability (P50) that the quantities actually recovered will equal or exceed the best estimate.

ADX has only reported Best Estimate Prospective Resources Scenarios in this release.

Corporate Overview

Austria (Operator, 100% equity)

Vienna basin oil and gas production
H₂ production & storage project
Oil development & gas exploration
Geothermal development opportunity

Romania (Operator, 49.2% equity)

Production & exploration licenses
Appraisal & exploration opportunities

Italy (Operator, 100% equity)

Oil field redevelopment project
34.1 MMBBL (2C) Resource (CPR) ^{note 1}
License Moratorium

European focussed production, development, exploration and renewable energy assets

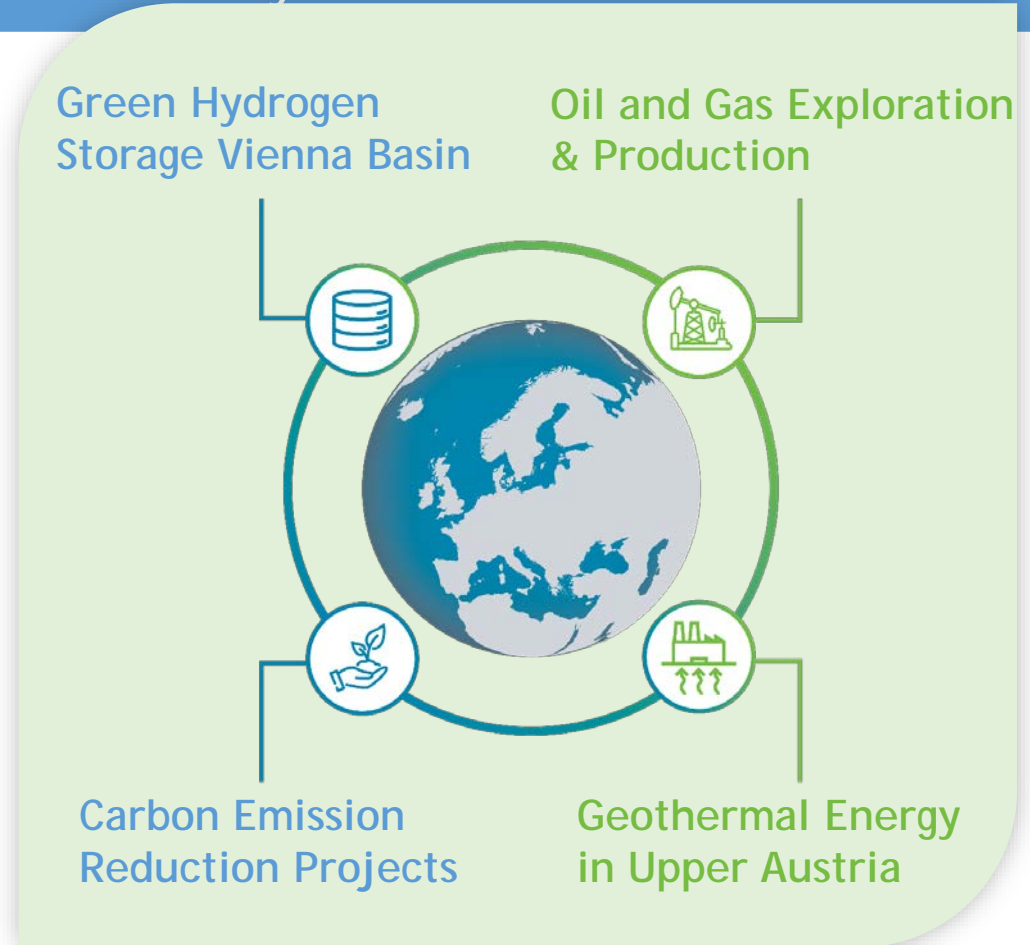

Note 1: Contingent Resources Reporting Date for Nilde 29/3/2018

ADX Strategic and Sustainability Focus

ADX is a European energy producer providing low emission energy now and transforming its asset base with green energy solutions for a low carbon society

- » We produce safe, long life, low emissions oil and gas desperately needed to sustain the European economy
- » We are developing new oil reserves which can deliver further much needed energy for the local economy
- » We have drill ready high impact gas exploration as well as low-risk exploration potential that can be rapidly developed
- » We are upcycling and redeploying our assets, people and skills for long term zero carbon energy production projects including:
 - Vienna Basin hydrogen (H₂) production and storage project, and
 - Geothermal energy generation opportunities in Austria and central Europe

"We are developing and exploring for much needed domestic energy as well as investing in long term, low carbon energy assets which is enhancing the value of both asset classes"

Recent Highlights

Upstream oil and gas

Production

100% equity in the Zistersdorf and Gaiselberg fields in Austria (Vienna basin)

Stable production averaging 285 boepd in 2020 & 2021

Increased reserves
1.85 mmboe ^{Note 1}
of 2P developed reserves

Increasing revenues
+69% from 2020 to 2021 in line with increasing oil and gas price

Exploration & Appraisal

100% equity in ADX-AT-I and ADX-AT-II ^{Note 3} in Upper Austria

Expanded position from 450 km² to 1022 km²

New giant Welchau 750 BCF (125 mmboe) ^{best case} prospective resources ^{Note 2}

Anshof-3 discovery testing 132 bbls/day ^{with} substantial production and reserves potential

Farmout to XST.AX
20% interest in Anshof farmin area

Renewable energy

Green hydrogen (H₂)

Project formation in the Vienna Basin (production, storage and marketing)

Developing green power supply options

Feasibility studies for 100+ GWh of underground storage capacity (from depleted reservoirs)

Investigating access to local H₂ markets

Geothermal

Developing investment case for geothermal project in Upper Austria

Extensive opportunities for geothermal energy in Upper Austria, Romania and Central Europe

- Note 1: Reserves Reporting Date (Independently Audited) : Gaiselberg and Zistersdorf in Austria 4/11/2021
- Note 2: Prospective resources reporting date on 16/5/2022
- Note 3: ADX equity post satisfaction of farmin obligations by Xstate in Anshof farmin area will be 80%

The European Energy Markets

Large unmet demand for energy

Even prior to Ukraine-Russia conflict

- ✓ Large price increase across all key commodities BUT especially gas
- ✓ Gas has become a critical, strategic supply imperative
- ✓ Sustainably produced, low emission, domestic oil remains important for the foreseeable future
- ✓ Carbon pricing reflects the increasing demand for low carbon energy

ADX strategic position

Well placed in Austria for oil, gas and renewable

- ✓ High value, sustainable oil and gas production at Zistersdorf
- ✓ New production and reserves development at Anshof
- ✓ High impact gas exploration such as the giant Welchau prospect
- ✓ The Vienna basin hydrogen project and Upper Austria geothermal project

European Energy Pricing Trends

Monthly Prices indexed to January 2020

Summary of Pricing Trends

Percentage Increases *

Natural Gas 634%

Brent Crude 48%

Carbon Price 269%

Electricity 312%

Gas Oil 46%

* Compared to 1 Jan 20

European Gas Prices & Outlook

Tight market prior to Ukraine-Russia conflict

285% price increase over the last 12 months

Price convergence with Asian LNG price levels

Dutch TTF gas prices trading at 40% premium to Brent

Unreliable gas supplies from Russia

Supply shortage far exceeds demand destruction

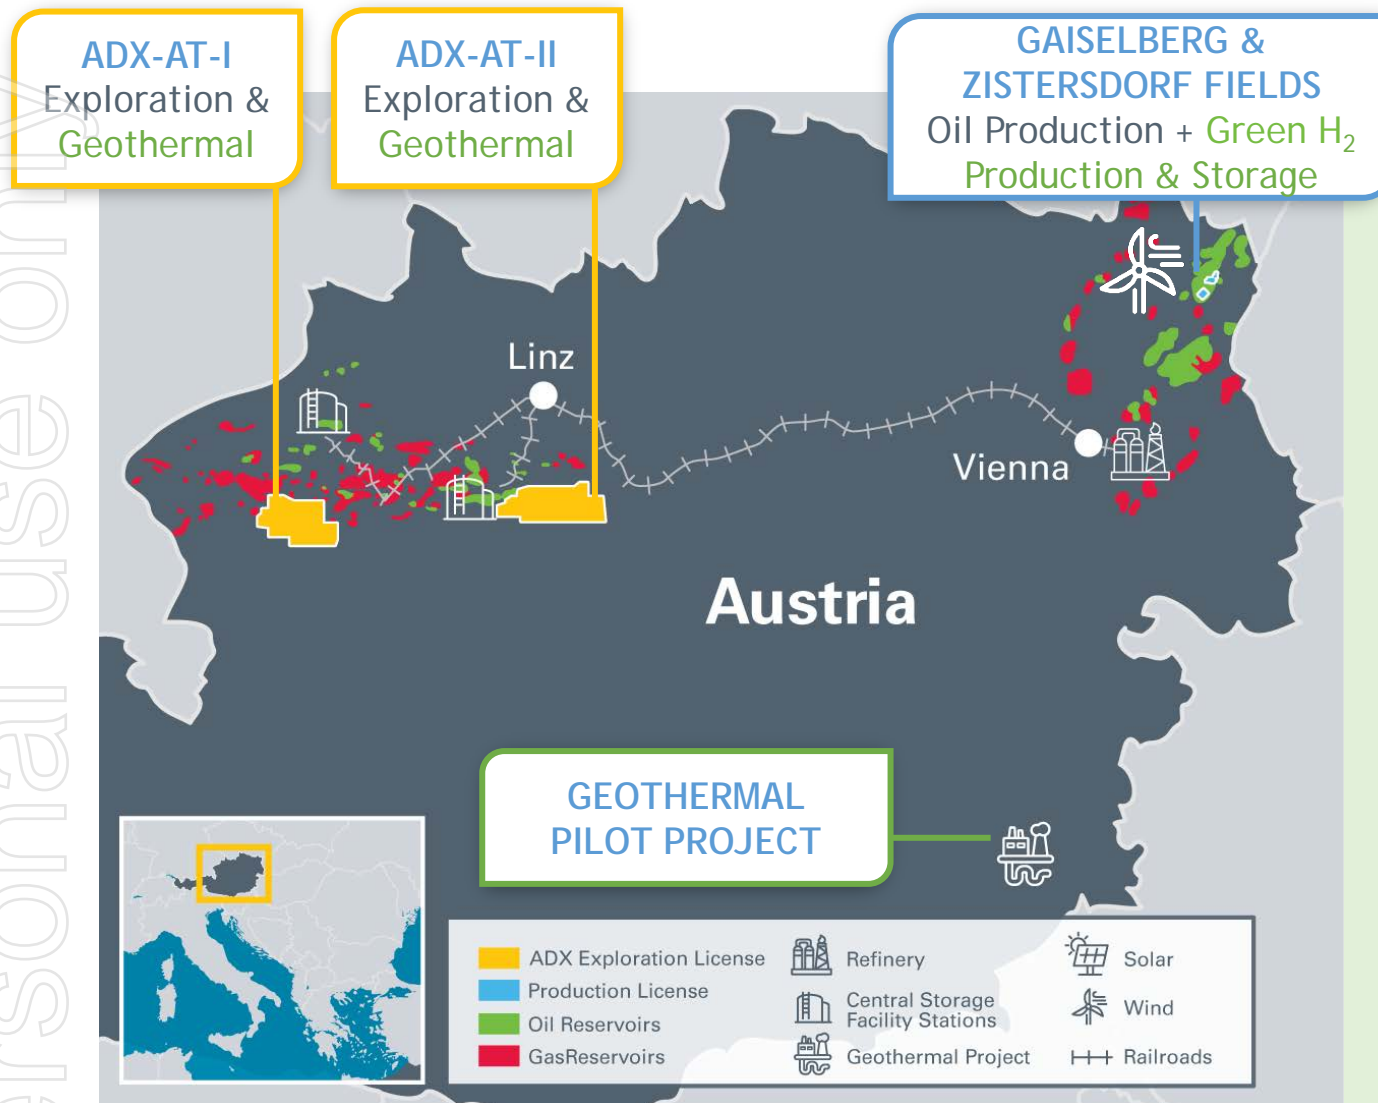

Increased domestic production and LNG supplies are the only credible gas sources to substitute piped gas deliveries from Russia

Supply uncertainty and use of LNG likely to keep prices at a high level for the foreseeable future in line with forward curve

ADX Assets in Austria - Conventional & Green Energy

ADX has a rare and unique position for conventional and green energy projects

- ADX has broken into a 75-year energy duopoly
- Prolific oil & gas basins ~1 billion barrels of oil and 2.7 Tcf of gas¹
- ADX is one of 3 production and 2 exploration operators
- ADX has secured a portfolio of green and conventional energy assets
- Access to oil & gas and green energy infrastructure reduces development time frames and improves economics
- Access to an existing 3D seismic data set has provided immediate exploration and appraisal opportunities
- A capable & experienced local team
- Government funding and regulatory support

Notes: ¹ Historical production

Production, Appraisal and Exploration Assets

Vienna Basin Production and Upper Austria Exploration

“A blend of stable cashflow, production growth through appraisal and development as well as high impact, quick to monetise exploration adjacent to infrastructure”

Gaiselberg & Zistersdorf Fields (Vienna Basin)

Summary of asset attributes

- 100% equity acquired in December 2019
- Low decline long life production (2020 & 21 285 BOEPD avge)
- Low emission production from state of the art facilities
- Pipeline to Vienna refinery (70 Kms)
- Ownership of 13.7 hectares agricultural land (vineyards)
- High value sweet crude oil (33° API - 7.9% discount to Brent)
- Excellent fiscal terms (corporate tax at 25% and no royalties)
- Depleted gas reservoirs suitable for Hydrogen storage

Stable production and increasing revenues in line with oil and gas price

Multilayer
reservoir

Upper Austria Exploration Asset Overview

- **Doubled license area of** ADX-AT-I and ADX-AT-II; now 1022 km² area covered with modern 3D seismic
- **Anshof-3 discovery well** drilled within 12 months of license award
 - Testing confirmed oil rates of 132 bopd, test production and first cash flow in Q3 2022
 - High productivity development well drilling planned on large field area (24 km²)
- **New World Class Gas 750 Bcf** best technical prospective resources "**Welchau**" prospect ^{Note 2} added with large upside, up dip from proven 400 m⁺ gas column
- **New High impact gas targets** such as ZAM and OHO prospects now fully included with enlarged trend
- **New Field Rejuvenation Opportunity** Oil field Piberbach
- **New Combined Gas and Geothermal** power generation

16 Drill Ready Prospects mapped already with high quality 3D

72 MMBOE portfolio best technical estimate prospective resources ^{Note 1}

New 1022 km² combined license acreage adjacent to infrastructure

New World Class 0.75 Tcf Gas ^{Note 2} Welchau prospect

Fast Payback Infrastructure Access agreements, Anshof long term test production

Note 1: The Original Resources Reporting Date: Upper Austria Exploration was on 30/11/2020, estimates were further revised on 30/3/21

Note 2: Prospective Resources Reporting date on 16/5/2022

Anshof discovery on pathway to cashflow

- **Successful well testing** with 132 bopd high quality oil confirming pre-drill best technical prospective resources of **6.6 mmboe** ^{Note 1} (independently assessed).
- **Independent reserves review** work to book proven and probable reserves underway.
- **Field mapping based on high quality 3D seismic** and well data identifying areas of thick Eocene reservoir development with high oil productivity expected.
- **New development well** planning from Anshof-3 location largely completed and ready for long lead item procurement
- **Rapid first cash flow** planned from long term test production in Q3 2022.

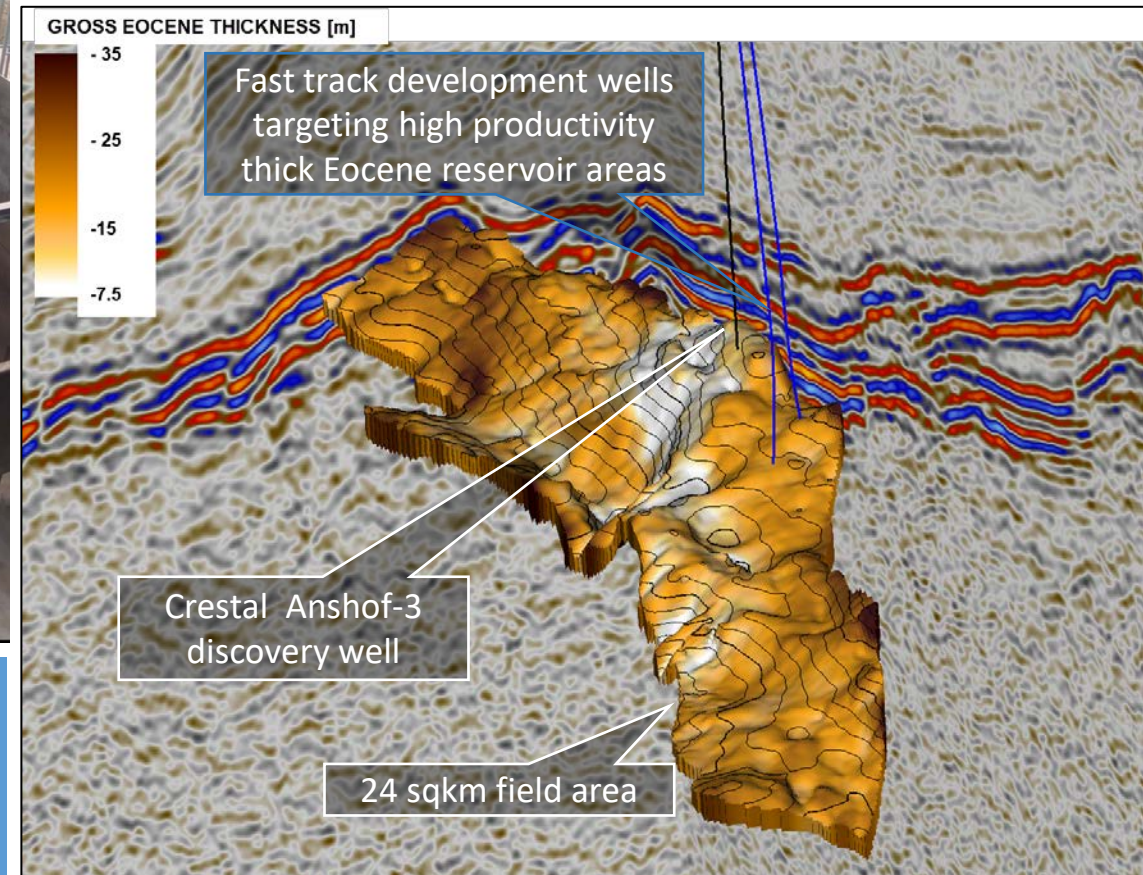

First oil flow to surf during testing

High quality 33 API oil produced

Anshof field mapping

Based on a 3D model utilising 3D Seismic & offset well data

Welchau gas prospect - exceptional potential

Surface expression of anticline with 23 km lateral extent & 100 km² area

3D image of Welchau prospect gas reservoir target

- **Giant Thrust Anticline Structure** with a best technical prospective gas resource of **750 Bcf (approximately. 125 Million Barrels of oil equivalent)** with multi Tcf upside potential ^{Note1}.
- **Proven Play Type** with downdip well (Moln-1, drilled 1989) proving 400+ meter gas column with pressure and test data)

Exceptional economic potential:

- Located in the heart of European gas market
- Close to national pipeline infrastructure
- Shallow drill depth (approx. 2000 m)
- European gas prices likely to remain high for many years to come
- Approx. USD 30 per mcf (USD 180 per barrel of oil equivalent) year to date.

Moln-1 well gas test in 1969

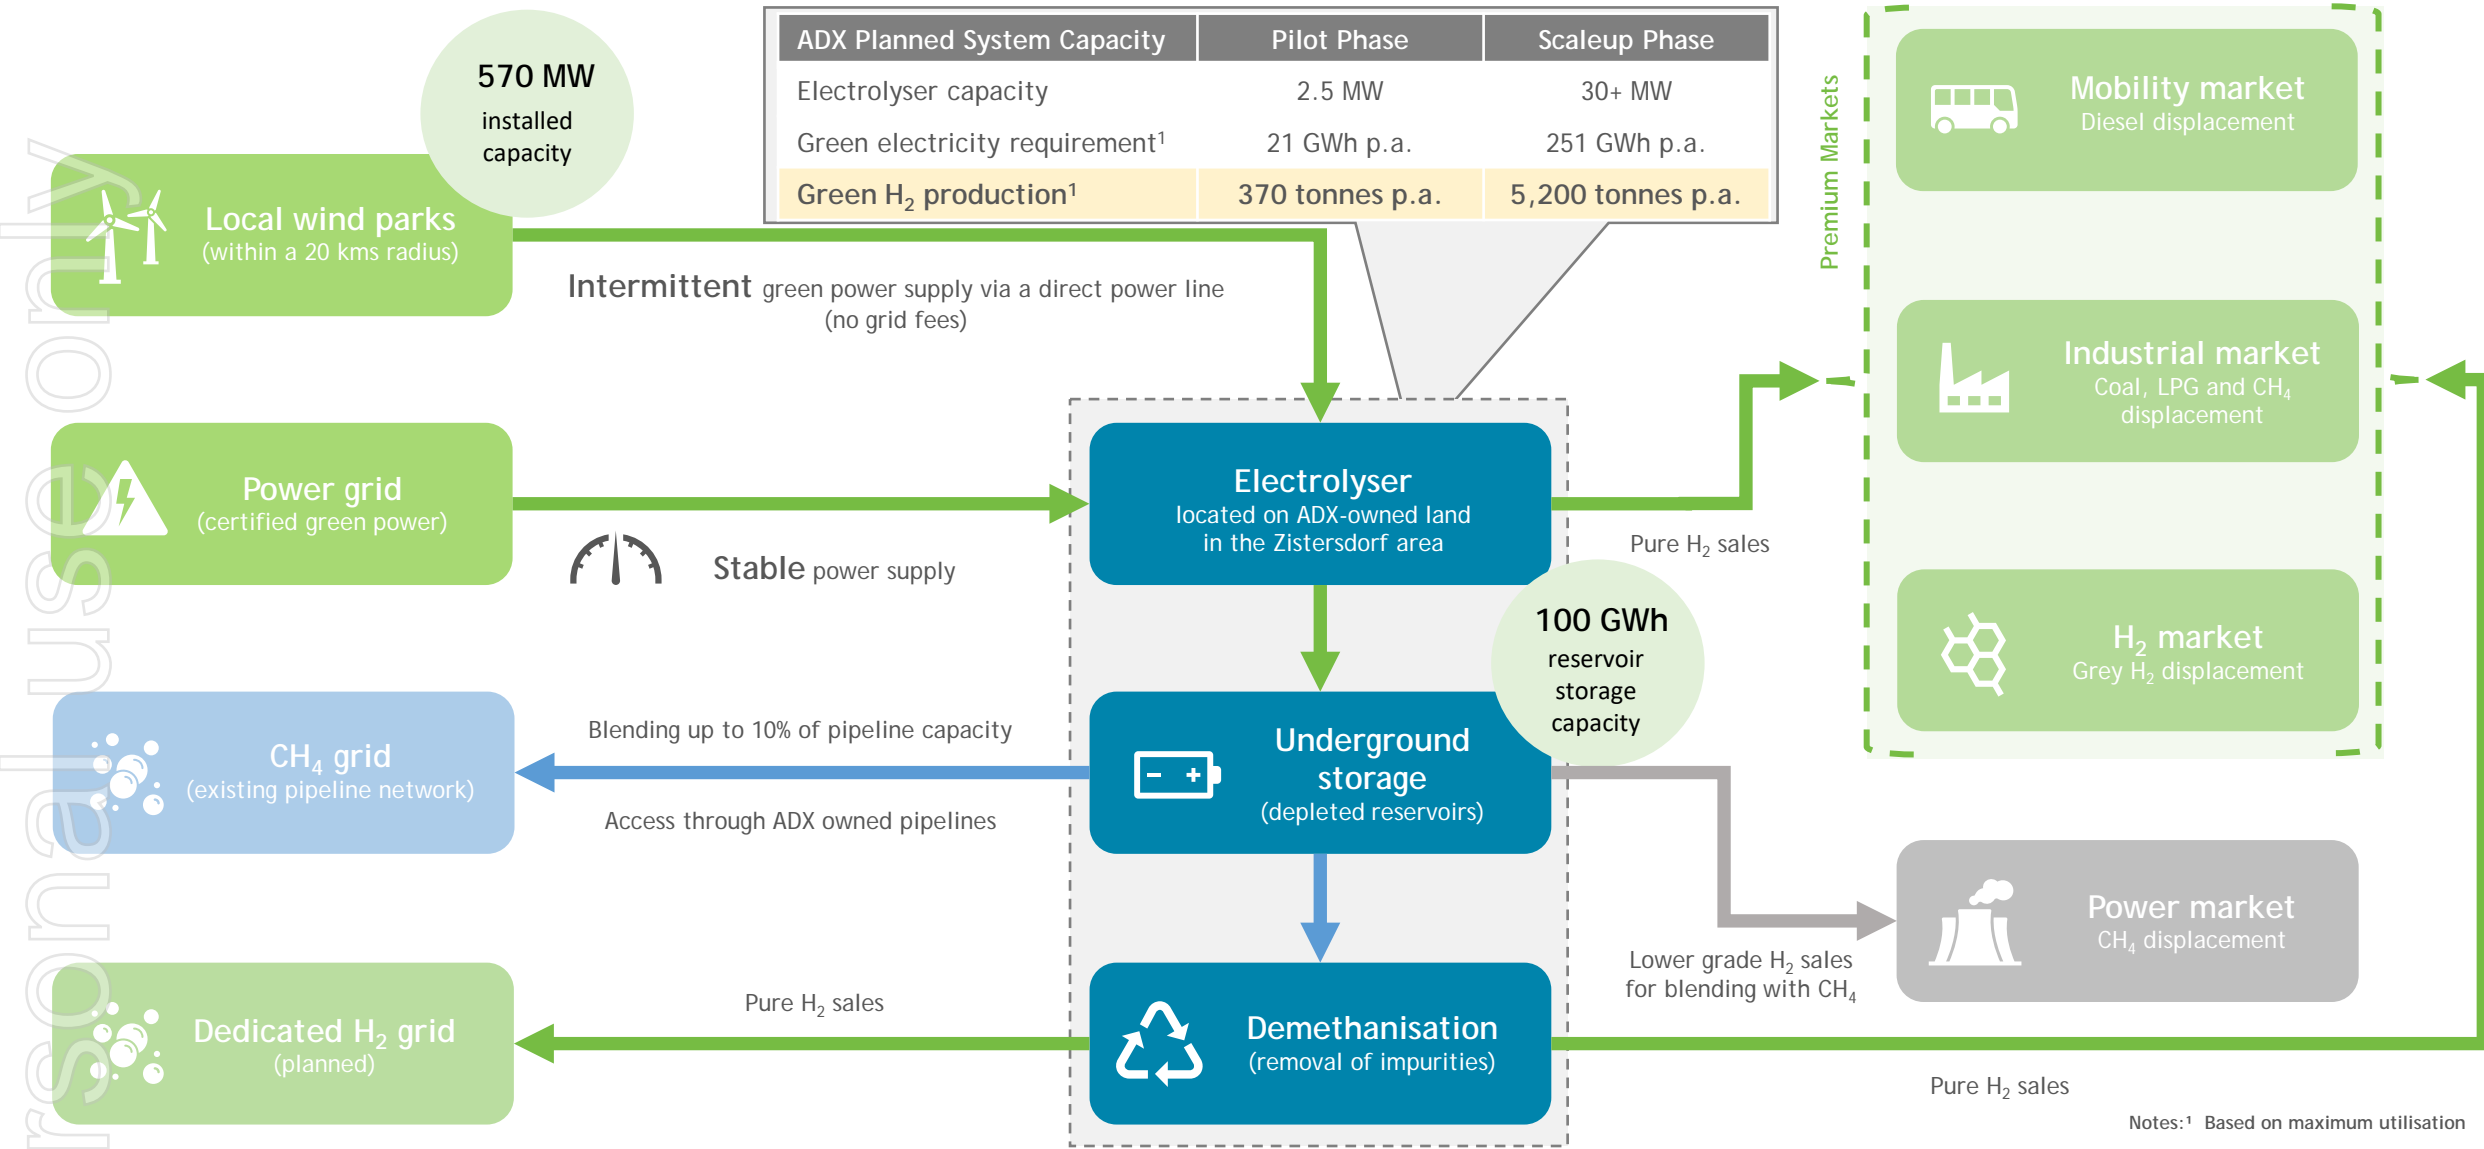

The Moln - 1 well tested pipeline quality gas in multiple tests

Renewable Energy Projects

*Vienna Basin Green H₂
Project and Geothermal
energy opportunities*

*“Long term renewable energy
projects that will enable ADX to
transition its business for a low
carbon economy”*

Vienna Basin Green H₂ Project - BOD Overview

Notes:¹ Based on maximum utilisation

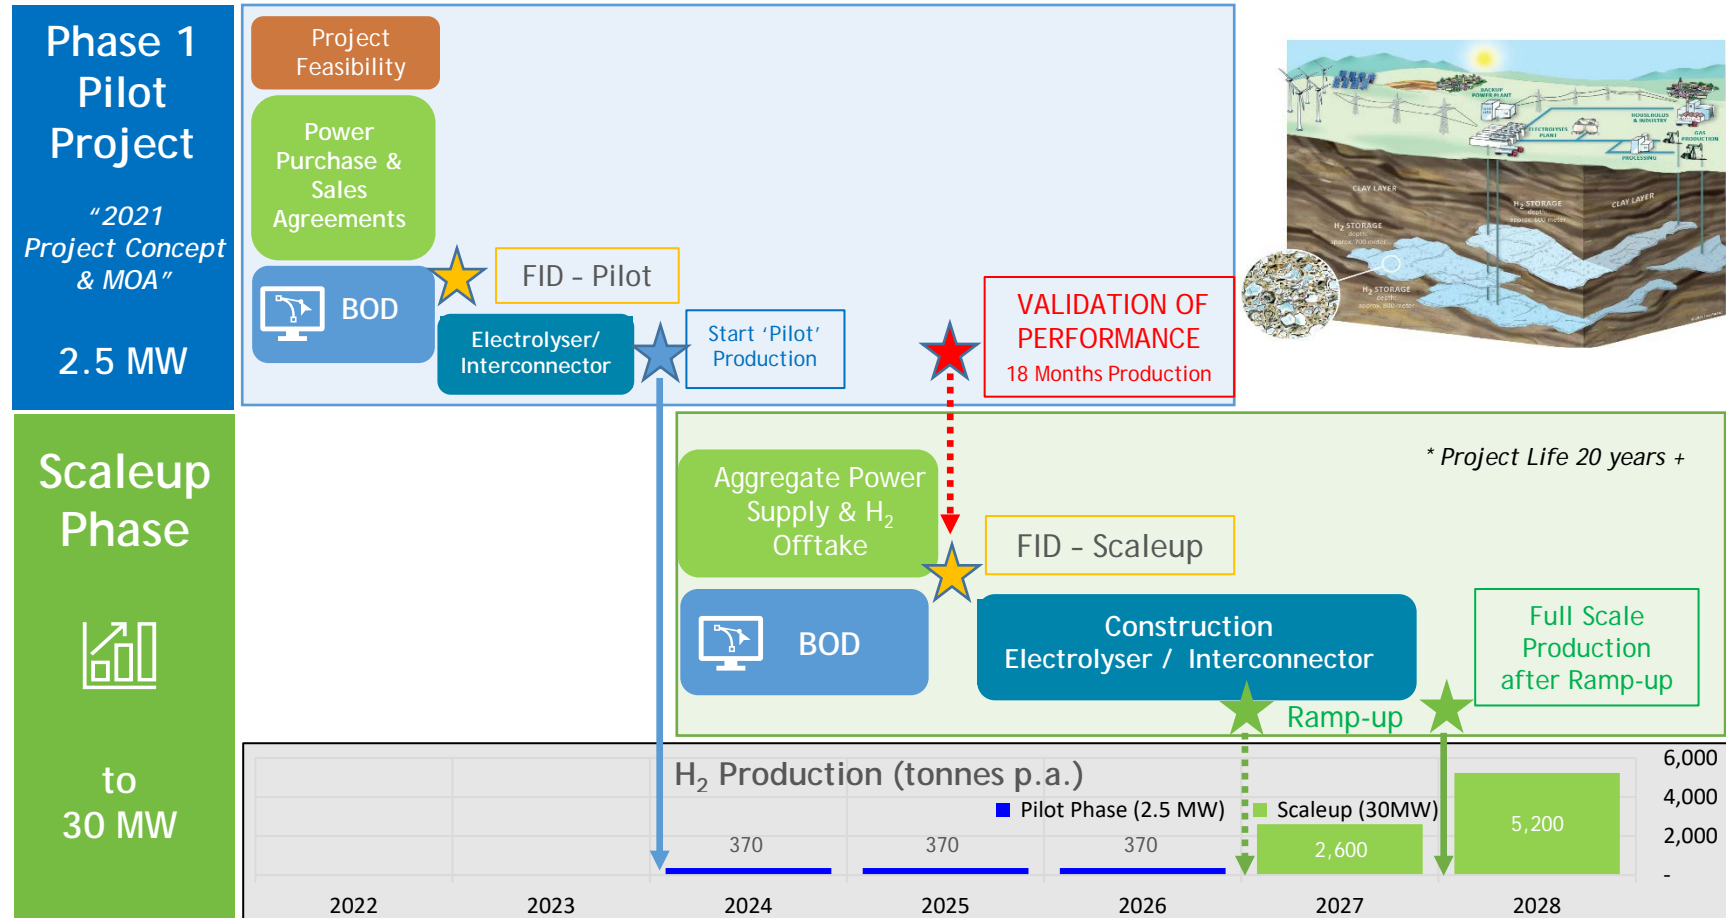

Vienna Basin Green H₂ Project - Key Milestones

Project Success Factors

"Combining Green Hydrogen Production and Underground Storage is an important enabler for long term stable green hydrogen supply and a key success factor for the Project"
