Announcement

Thursday, 1 December 2022

INVESTOR BRIEFING DAY 2022

Woodside Energy CEO Meg O'Neill today outlined the company's compelling investment proposition as a safe, reliable, low cost and lower carbon supplier of energy to a world that needs it.

"At this critical moment in time, with the world now feeling the impact of an energy security and affordability crisis, Woodside is producing and developing the products and services needed for both decarbonisation and to support growing populations and economies," Ms O'Neill said at an investor briefing.

"Woodside is delivering on the strategy that drove the merger in June with BHP Petroleum, based on leveraging our portfolio of high quality assets, our disciplined approach to capital management and our ability to thrive through the energy transition.

"The company is well positioned as a high margin, high yield and gas weighted business that is generating strong returns today and will continue to do so as we realise our pipeline of development opportunities for 2027 onwards.

"Our expanded portfolio of long-life assets in Australia, the US, Senegal and the Caribbean offers the scale, diversification and resilience to deliver enduring value to shareholders.

"We are successfully executing world-class growth projects at Sangomar in Senegal and Scarborough/Pluto Train 2 in Australia, which are on target for first production in 2023 and 2026 respectively. The Mad Dog Phase 2 development in the Gulf of Mexico is also expected online in 2023.

"At Trion in Mexico, which contains around 500 million barrels of oil, the team is working towards being ready for a final investment decision in 2023.

"Our operating cash flow is forecast to remain at around \$7 billion to \$9 billion over the next five years. This, along with our strong debt profile with undrawn facilities of \$4.1 billion, highlights the strength of the balance sheet and provides Woodside with the liquidity capacity for both major capital investment and shareholder returns. Our BBB+ and Baa1 credit ratings were also recently reaffirmed.

"Woodside will continue to apply our clear capital allocation framework as we assess our opportunities in both conventional and new energy, all of which must support our net equity emissions reduction targets and commitments to shareholders.

"Woodside's customer-led, scalable approach to investing our targeted \$5 billion in new energy and lower carbon services is beginning to yield results. In recent months, we announced plans for a hydrogen refuelling station near Perth and awarded a major contract for the H2OK hydrogen project in the US, where an investment decision is being targeted for 2023 and first production in 2025.

"Our LNG marketing strategy reflects changing global dynamics and we have expanded our presence in the Atlantic Basin and increased volume of shorter-term trading of all products. Woodside is both building on our existing long-term relationships and diversifying our customer base to ensure our position as a partner of choice to buyers seeking reliable supply and energy security.

"We have already implemented initiatives to deliver more than \$200 million in post-merger synergies and are on track to achieve net synergies of more than \$400 million by 2024," she said.

To access the live webcast of the Investor Briefing Day, please follow the link at https://webcast.openbriefing.com/9173/. The webcast will commence at 09.30 AEDT / 06.30 AWST (16.30 CST on Wednesday, 30 November 2022).

Further details of the key risks can also be found in the prospectus issued by Woodside in connection with its admission to trading on the London Stock Exchange, available on the Company's website at <u>https://www.woodside.com/investors</u>. You should review and have regard to these risks when considering the information contained in this presentation.
- Investors are strongly cautioned not to place undue reliance on any forward-looking statements. Actual results or performance may vary materially from those expressed in, or implied by, any forward-looking statements.

Notes to petroleum resource estimates

- Unless otherwise stated, all petroleum resource estimates are quoted as at the effective date (i.e. 1 June 2022) of the Reserves and Resources Update included in Woodside's Half-Year Report released to the Australian Securities Exchange and the London Stock Exchange on 30 August 2022 and available at <u>https://www.woodside.com/news-andmedia/announcements</u>, net Woodside share at standard oilfield conditions of 14.696 psi (101.325 kPa) and 60 degrees Fahrenheit (15.56 degrees Celsius).
- 2. Woodside is not aware of any new information or data that materially affects the information included in the Reserves and Resources Update. All the material assumptions and technical parameters underpinning the estimates in the Reserves and Resources Update continue to apply and have not materially changed.
- 3. Proved (1P) Reserves are estimated and reported in accordance with the United States Securities and Exchange Commission (SEC) regulations, which are also compliant with SPE-PRMS guidelines. SEC-compliant Proved (1P) Reserves estimates use a more restrictive, rules-based approach and are generally lower than estimates prepared solely in accordance with SPE-PRMS guidelines due to, among other things, the requirement to use commodity prices based on the average price during the 12-month period in the reporting company's fiscal year. Proved plus Probable (2P) Reserves and Best Estimate (2C) Contingent Resources are estimated and reported in accordance with SPE-PRMS guidelines and are not compliant with SEC regulations.

Disclaimer, important notes and assumptions (continued)

Notes to petroleum resource estimates (continued)

- 4. Woodside reports its petroleum resource estimates inclusive of all fuel consumed in operations.
- 5. For offshore oil projects, the reference point is defined as the outlet of the floating production storage and offloading facility (FPSO) or platform, while for the onshore gas projects the reference point is defined as the outlet of the downstream (onshore) gas processing facility.
- 6. Woodside uses both deterministic and probabilistic methods for the estimation of Reserves and Contingent Resources at the field and project levels. All Proved (1P) Reserves estimates have been estimated using deterministic methodology and reported on a net interest basis in accordance with the SEC regulations and have been determined in accordance with SEC Rule 4-10(a) of Regulation S-X. Unless otherwise stated, all petroleum estimates reported at the company or region level are aggregated by arithmetic summation by category. The aggregated Proved (1P) Reserves may be a conservative estimate due to the portfolio effects of arithmetic summation.

'MMboe' means millions (10⁶) of barrels of oil equivalent. Natural gas volumes are converted to oil equivalent volumes via a constant conversion factor, which for Woodside is 5.7 Bcf of dry gas per 1 MMboe. Volumes of natural gas liquids, oil and condensate are converted from MMbbl to MMboe on a 1:1 ratio.

Assumptions

Unless otherwise indicated, the targets set out in this presentation have been estimated on the basis of a variety of economic assumptions including: (1) US\$70/bbl Brent long-term oil price (2022 real terms, inflated at 2.0%); (2) currently sanctioned projects being delivered in accordance with their current project schedules; and (3) applicable growth opportunities being sanctioned and delivered in accordance with the target schedules provided in this presentation. These growth opportunities are subject to relevant joint venture participant approvals, commercial arrangements with third parties and regulatory approvals being obtained in the timeframe contemplated or at all. Woodside expresses no view as to whether its joint venture participants will agree with and support Woodside's current position in relation to these opportunities, or such commercial arrangements and regulatory approvals will be obtained. Additional assumptions relevant to particular targets or other statements in this presentation may be set out in the relevant slides. Any such additional assumptions are in addition to the assumptions and qualifications applicable to the presentation as a whole.

Climate strategy and emissions data

- Further information as to Woodside's climate strategy, including references to "lower carbon" as part of that strategy, is set out in Woodside's Climate Report 2021 available on the Woodside website at
- https://www.woodside.com/sustainability/climate-change. The glossary and footnotes to this presentation provide further clarification of "lower carbon" where applicable.
- All greenhouse gas emissions data in this presentation are estimates, due to the inherent uncertainty and limitations in measuring or quantifying greenhouse gas emissions.
- Woodside "greenhouse gas" or "emissions" information reported are Scope 1 GHG emissions, Scope 2 GHG emissions, and/or Scope 3 GHG emissions. For more information on emissions data refer to Woodside's Climate Report 2021 available on the Woodside website at <u>https://www.woodside.com/sustainability/climate-change</u>

Other important information

- All references to dollars, cents or \$ in this presentation are to US currency, unless otherwise stated.
- References to "Woodside" may be references to Woodside Energy Group Ltd, Woodside Energy Group Ltd and its

subsidiaries or Woodside Energy Group Ltd and its applicable subsidiaries (as the context requires).

- This presentation does not include any express or implied prices at which Woodside will buy or sell financial products.
- A securities rating is not a recommendation to buy, sell or hold securities and may be subject to revision or withdrawal at any time.

Non-IFRS financial information

Throughout this presentation a range of financial and non-financial measures are used to assess Woodside's performance, including a number of financial measures that are not defined or specified under IFRS (International Financial Reporting Standards), which are termed Non-IFRS Financial Measures. These measures include EBITDA margin, Gearing, Underlying NPAT, Free cash flow and Capital expenditure. Refer to the glossary section of this presentation for the definition of these terms. Management uses these measures to monitor Woodside's financial performance alongside IFRS measures to improve the comparability of information between reporting periods and business units. These Non-IFRS Financial Measures should be considered in addition to, and not as a substitute for, or as superior to, measures of financial performance, financial position or cash flows reported in accordance with IFRS. Non-IFRS Financial Measures are not uniformly defined by all companies, including those in Woodside's industry. Accordingly, they may not be comparable with similarly titled measures and disclosures by other companies.

Disclosure of reserve information and cautionary note to US investors

- Woodside is an Australian company listed on the Australian Securities Exchange, the New York Stock Exchange and the London Stock Exchange. Woodside reports its Proved (1P) Reserves in accordance with SEC regulations, which are also compliant with SPE-PRMS guidelines, and prepares and reports its Proved plus Probable (2P) Reserves and Best Estimate (2C) Contingent Resources in accordance with SPE-PRMS guidelines. It reports all of its petroleum resource estimates using definitions consistent with the 2018 Society of Petroleum Engineers (SPE)/World Petroleum Council (WPC)/American Association of Petroleum Geologists (AAPG)/Society of Petroleum Evaluation Engineers (SPEE) Petroleum Resources Management System (PRMS).
 - The SEC prohibits oil and gas companies, in their filings with the SEC, from disclosing estimates of oil or gas resources other than "reserves" (as that term is defined by the SEC). In this presentation, Woodside includes estimates of quantities of oil and gas using certain terms, such as "Proved plus Probable (2P) Reserves", "Best Estimate (2C) Contingent Resources", "Reserves and Contingent Resources", "Proved plus Probable", "Developed and Undeveloped", "Probable Developed", "Probable Undeveloped", "Contingent Resources" or other descriptions of volumes of reserves, which terms include quantities of oil and gas that may not meet the SEC's definitions of proved, probable and possible reserves, and which the SEC's guidelines strictly prohibit Woodside from including in filings with the SEC. These estimates are by their nature more speculative than estimates of proved reserves and would require substantial capital spending over a significant number of years to implement recovery, and accordingly are subject to substantially greater risk of being recovered by Woodside. In addition, actual locations drilled and quantities that may be ultimately recovered from Woodside's properties may differ substantially. Woodside has made no commitment to drill, and likely will not drill, all of the drilling locations that have been attributable to these quantities. US investors are urged to consider closely the disclosures in Woodside's filings with the SEC, which are available at www.sec.gov.

ersoi

The investment case – a global energy supplier

HIGH QUALITY PORTFOLIO

Scale, diversification and resilience to deliver enduring value

Framework established to optimise value and shareholder returns

Agile, flexible and adaptable as the world's energy mix evolves

Advantaged locations and markets

Conventional asset base weighted to LNG

Major growth projects in execution

Pipeline of opportunities

Resilient cash flow

History of strong dividends

Clear capital allocation and capital management frameworks

Strong balance sheet

Delivering **net emissions reduction** targets¹ Progressing **new energy** opportunities

Customer-led and scalable

Safe | Reliable | Low cost | Lower carbon | High cash generation

Woodside's net emissions reduction targets are for net equity Scope 1 and 2 greenhouse gas emissions, with a targeted reduction of 15% by 2025, 30% by 2030, with an aspiration of net zero by 2050. The net emissions reduction targets are relative to a starting base of the gross annual average equity Scope 1 and 2 greenhouse gas emissions over 2016-2020. The baseline will be adjusted for the assets acquired through the merger with BHP Petroleum and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with an FID prior to 2021.

Strongly positioned business

Distinctive combination of strong margin, high dividend yield and gas weighting

Dataset: Woodside Energy, Apache, Continental Resources, Canadian Natural Resources, ConocoPhillips, Coterra Energy, Devon Energy, ENI, EOG Resources, Equinor, Hess Corporation, Inpex, Marathon Oil, Pioneer Natural Resources, Occidental Petroleum, Santos Source: ThomsonReuters Eikon (using last full-year of reported data).

Non-IFRS financial measure. EBITDA margin is calculated as earnings before interest, taxes, depreciation and amortisation divided by operating revenue. Source: ThomsonReuters Eikon (using last full-year of reported data).
Dividend yield as of November 16, 2022. Yield is the quantum of returns to shareholders relative to share price, as at November 16, 2022. Source: Bloomberg.

3. 3 gas is natural gas production divided by the total of oil, condensate, NGL, and natural gas production. Third Quarter 2022 production for Woodside. Source: ThomsonReuters Eikon (using last full-year of reported data).

Production growth supported by projects in execution

>4% compound annual growth rate (CAGR) from 2023 to 2027¹ Key catalysts for production growth are Sangomar and Scarborough start-up 2023 production guidance of 180 – 190 MMboe Pipeline of opportunities post-2027

Production profile with sanctioned projects (MMboe)¹

Indicative only, Woodside share. The production profile is based on the assumptions that current sanctioned projects are delivered within their target schedules, an 82% participating interest in Sangomar and a 100% interest in Scarborough. It also assumes no sell-down of participating interests in Sangomar or Scarborough. Accordingly, the production profile is provided for illustrative purposes only and should not be relied on as guidance.

Our products enable a stable energy transition

Providing the energy needed in a decarbonising world

ENERGY AFFORDABILITY

Affordability is required for **energy equity** and a stable energy transition

ENERGY RELIABILTY

Secure, reliable energy is **essential for economic growth and developing economies**

Gas provides electricity grids with **reliable baseload and firming power**, enabling increased renewables deployment

LOWER CARBON ENERGY MIX

Emerging **new energy** markets will be balanced with **lower cost**, **lower carbon oil and gas**

Economic growth driving energy demand

Global GDP expected to almost double by 2050 and global population growth is forecast to continue

Non-OECD energy demand increase expected to outstrip efficiencies gained in OECD

One in four people do not have access to clean cooking fuels¹

One in ten people do not have access to electricity¹

2023 capital expenditure guidance of \$6.0-6.5 billion

Investing in Woodside's future production

Maximising production from existing facilities

Capacity for future profitable investment opportunities

Forecast capital expenditure – committed activities (\$ billion)¹

2023 forecast capital expenditure

Capital expenditure		
Sangomar	%	~20%
Scarborough	%	~50%
GoM & Caribbean ²	%	~15%
Australia, Corporate & Other ³	%	~15%
Total capital expenditure	\$ million	6,000 – 6,500

Indicative only, not guidance. Woodside share at current equity levels. Please refer to the "Disclaimer and important notices" section (including under the heading "Forward looking statements") for important cautionary information relating to forward looking statements.

GoM & Caribbean includes future uncommitted expenditure.

3

4.

Australia, Corporate & Other includes capital expenditure for Australian operations; Corporate; New Energy; Technology; and pre-FID capital expenditure for Browse and Sunrise.

Potential major capital expenditure is committed activities and indicative execution expenditure for Trion, Calypso and H2OK, assuming current participating interests and positive FIDs in accordance with targeted project schedules.²⁵

Resilient cash flows

Resilient cash flow profile supported by portfolio of operational assets

Cash flow supports funding of projects under construction and shareholder returns

Approximately \$70 million movement in free cash flow per \$1 movement in Brent oil price

Operating cash flow¹

Indicative only and intended to provide overall future profiles for operating cash flow and free cash flow. The profiles assume a Brent oil forward price curve (as at 16 November 2022) of \$89/bbl in 2023, \$82/bbl in 2024, \$77/bbl in 2025, \$75/bbl in 2026 followed by a long term \$70/bbl (real terms 2022) from 2027. Includes sanctioned projects at current equity levels and unsanctioned cash flows for Trion in 2023 only. Assumes foreign exchange rate of AUD to USD 0.67. Assumes currently sanctioned projects being delivered in accordance with their current project schedules. Accordingly, the profiles are provided for illustrative purposes only and should not be relied on as guidance. Please refer to the "Disclaimer and important notices" section (including under the heading "Forward looking statements") for important cautionary information relating to forward looking statements. 26

Non-IFRS measure. Free cash flow is cash flow from operating activities less cash flow from investing activities. Committed capital only.

Returning value to shareholders

Balance sheet positioned to deliver growth and returns

History of strong shareholder returns

214 US cents per share of fully franked dividends paid in last 12 months

Dividends paid¹ (US cps)

Final dividend payment

Interim dividend payment

- Full-year dividend payout ratio (% of underlying NPAT)

MARKETING AND TRADING

Mark Abbotsford Executive Vice President Marketing and Trading

Customer-led and value-led marketing strategy

BUILDING SCALE AND FLEXIBILITY IN PORTFOLIO

ADAPTABLE, RESILIENT AND RESPONSIVE TO MARKET CHANGES

FOCUS ON CUSTOMERS AND THE ENERGY TRANSITION

Expanding **global marketing presence**, including in the Atlantic where we have options for **low cost, flexible LNG offtake**

Increasing **optimisation** and **shorter-term trading** of all products Contract portfolio and price mix that balances exposure to upside and revenue certainty during volatile conditions

Layering timing of sales through market cycles, to capture opportunities at the right time

Scaling up shipping to support marketing and create value through delivery of seaborne products Positioning as partner of choice to highquality buyers seeking **reliable supply and energy security**

Building on core long-term partnerships

Diversifying customer base and expanding new energy offerings

Increasing price index diversification and gas hub exposure

Near-term (2023-2025)

- Leverage flexibility in base portfolio of oil-indexed sales to access upside through optimisation
- Retain share of uncommitted production to de-risk operations and access spot market
- Low volatility (including fixed price) sales support revenue stability
 - Produced LNG gas hub exposure guidance of 20-25% in 2023

Longer-term (2027+)

- Increased portfolio flexibility with new production and expiry of legacy LNG and gas contracts
- Diversified LNG portfolio; sales tenor, buyers, pricing, price reviews and flexibility
 - Adaptable and responsive to the market and buyers

Increasing gas supply for Australian energy market needs

Western Australia

AEMO 2023 forecast market share based on volume. Please refer to the "Disclaimer and important notices" section (including under the heading "Forward looking statements") for important cautionary information relating to forward looking statements.

East coast Australia includes New South Wales, Victoria, South Australia, Queensland, Australian Capital Territory and Tasmania.

31

PROJECTS

Matthew Ridolfi Executive Vice President Projects

100

PPIN G

Outstanding project delivery, benefiting from increased scale

SAFE	Zero lost time injuries or high-consequence work related injuries Applying technology to reduce safety hazards and optimise day to day operations
LOW COST	Increased scale enables improved contracting efficiency Delivery ahead of schedule and under budget; Greater Western Flank Phase 3, Pyxis Hub, Julimar-Brunello Phase 2 and Shenzi subsea multiphase pump
SCALE	Two operated major projects in progress with pipeline of operated development opportunities Currently operating six drilling rigs globally Capabilities and ways of working that scale across organisation
LOWER CARBON	Engineering decisions during the design phase in support of Scope 1 and 2 targets ¹

Pipeline of conventional opportunities

Sangomar Phase 1 – 72% complete, targeting first oil late 2023

- Second rig in operation since July 2022
- 6 out of 23 development wells completed
- **On schedule** with strong batch drilling performance

Subsea

- Conversion, topsides and turret fabrication complete
- Integration and commissioning to commence in Singapore

- All equipment manufacture nearing completion
- Offshore construction campaign commenced in September 2022
- Pipelay activities ongoing

Scarborough – 23% complete, targeting first LNG cargo 2026

```
Floating
production
unit (FPU)
```

- Site **construction works started** and progressing safely
- Construction accommodation village in Karratha is operational
- Train 1 modifications contractor selection targeted for H1 2023
- Trunkline tracking ahead of schedule
- Linepipe manufacturing ongoing
- Procurement program well advanced; 90% of tagged equipment ordered
- First steel cut and fabrication commenced

Subsea, umbilical, risers and flowlines (SURF)

- Xmas trees delivered and in warehouse
- Fabrication of the subsea flowlines ongoing

Managing risk

INFLATIONARY SUPPLY CHAIN REGULATORY CARBON

Project execution is well advanced; significant cost has been de-risked

Relocating FPSO to Singapore for integration and commissioning

Maximising local content opportunities aligned with regulation

Utilising technology to reduce greenhouse gas intensity Focus on 'operate out' opportunities within existing facility design

Project contracting strategy has helped mitigate inflation Strategy of locking in costs early where possible and utilising lump sum contracts

Early market engagement and orders placement Supply chain pinch points identified and actioned early

Progressing secondary regulatory approvals

Lower emission Pluto Train 2 design¹ <0.1% CO₂ in reservoir

Trion – progressing towards investment decision in 2023

Generates near-term cashflow

Competitive development cost with quick payback

ROBUST PLAN Trion is Mexico's first deepwater development Material resource with ~500 million barrels of 2C contingent resource¹ (gross)

Well-characterised subsurface and mature development concept

Targeting FID ready in 2023

UNLOCKS FUTURE GROWTH

Trion provides a base for future opportunities

Demonstrates deepwater capabilities in Mexico

Establishes infrastructure in Perdido Basin

Trion – mature development concept provides execution flexibility

1

Floating facilities

- Semi-submersible floating production unit with capacity of 100 kbbl/d oil
- Storage and offloading provided by separate
 vessel
- 12.6 kg CO₂-e/boe emissions, benchmarks
 below industry average for deepwater
 facilities¹

Subsea facilities

- Subsea well development
- Expandable infrastructure supports future infill wells development
- Approximately 130 km gas lateral connecting Trion to the existing midstream pipeline for Mexican markets

Reservoir and wells

- Two lower Eocene stacked reservoirs
- Target well depths of approximately 1,550 to 1,700 m below mudline
- Field development includes production, water injection and gas injection wells

Trion – clear path to final investment decision

Please refer to the "Disclaimer and important notices" section (including under the heading "Forward-looking statements") for important cautionary information relating to forward looking statements.

321.6 MMboe (net contingent resource Woodside share, 2C).

 \sim 0.2 Mtpa CO₂-e peak Scope 1 and 2 emissions unabated Woodside equity share.

AUSTRALIAN OPERATIONS

Woodside Energy

Breyden Lonnie Vice President North West Shelf

Safe, low cost and lower carbon Australian operations

LOW COST

LOWER

CARBON

Implementing area-specific safety improvement plans

Focused process safety management, including ongoing verification of effective process safety risk controls

New operating model implemented to control costs as NWS production declines

Delivering cost reductions through digital transformation

Progressing a proposed solar facility that could supply up to

100MW of solar power to Pluto and other customers

Asset decarbonisation plans being pursued

Western Australia

Woodside Third Quarter Report 2022.

2P + 2C net reserves and resources as at 1 June 2022 from the Woodside Half-Year Report 2022. Excludes Scarborough, Greater Scarborough, Greater Browse, Greater Sunrise and Stybarrow North. Includes fuel volumes of 138.3 MMboe and 17.3 MMboe for Western Australia and east coast Australia respectively.

Maximising value from existing assets

Strong operational performance

- Continuously optimising production and challenging current and future production constraints
- Maintaining high facility reliability

Nearfield and infill opportunities

- Delivered NWS Greater Western Flank-3 and Lambert Deep projects ahead of schedule and under budget
 - Developing economic infill and nearfield opportunities across the portfolio

Leveraging capacity

- Transitioning the NWS business to toll other resource opportunities using available capacity at Karratha Gas Plant (KGP)
 - Successfully processing Pluto gas via the Pluto-KGP Interconnector. To date, the Interconnector has accelerated 8 MMboe of Pluto production

Production (MMboe)¹

Indicative only, not guidance. Refer to slide 10 of this presentation for further information on assumptions. Please refer to the "Disclaimer and important notices" section (including under the heading "Forward looking statements") for important cautionary information relating to forward looking statements.

Asset decarbonisation plans

Asset decarbonisation plans have identified opportunities for up to 300 kt in potential emissions reductions by 2030 for heritage Woodside assets

Future asset decarbonisation plans will be identified for heritage BHP assets

Committed to responsible decommissioning

Enfield and Balnaves well plug and abandonment (P&A) campaign in progress

Bass Strait ongoing well P&A campaign and progressing approvals and planning for platform decommissioning

Multiple contracts awarded for removal of facility turrets and subsea hardware and equipment in WA waters

Progressing regulatory approvals for historical wellheads and subsea equipment removal

Indicative Australian Operations cumulative decommissioning spend (\$ billion)¹

Indicative only. Not guidance. Subject to a range of assumptions that may not occur as forecast. Please refer to the "Disclaimer and important notices" section (including under the heading "Forward looking statements") for important cautionary information relating to forward looking statements.

EXPLORATION AND DEVELOPMENT

Andy Drummond Executive Vice President Exploration and Development

Exploration

Value-focused portfolio to generate low cost, lower carbon development opportunities

High return options near existing infrastructure

Green field options prioritising "fast to market" and commerciality

Risk management

Characterise the subsurface and commercial elements

Leverage co-ownerships

Build diverse portfolio

Value focus

Fast commercialisation

Efficient execution

Rapid, high quality decisions

Disciplined spend: \$300 – 400 million annual budget¹

Calypso – development

Concept and resource

- 3.2 Tcf gross 2C contingent resource with additional unpenetrated potential¹
- ~250 km to southeast coastline in Trinidad
- Development concept screening is currently ongoing

Strategic fit

- $\mathcal{D}\mathcal{D}$ Trinidad and Tobago's largest undeveloped discovered resource
- Potential partial backfill to Atlantic LNG and domestic petrochemical infrastructure

Focus areas

- Low cost, lower carbon development concept
- Commercial and marketing alignment

Woodside licences

Browse – development

Concept and resource

- 14.6 Tcf of gas and 412 MMbbl condensate (gross contingent resource, 2C)¹
- Two FPSO facilities delivering ~11.4 Mtpa of LNG/LPG and domestic gas
- ~900 km pipeline to existing NWS project infrastructure

Strategic fit

Large resource with potential to back fill NWS, offer domestic gas security and provide long-term supply to Asian markets

Focus areas

Commercial progress

Environmental approvals

Sunrise – development

Concept and resource

5.3 Tcf (dry gas) and 226 MMbbl condensate (gross contingent resource, 2C)¹

Strategic fit

- Large resource with multiple development options
- LNG opportunity supported by expected future gas demand

Focus areas

- Commercial and marketing alignment
- Select appropriate development concept

NEW ENERGY

Shaun Gregory Executive Vice President New Energy

1

S

D

ona

Ś

Executing our new energy and lower carbon services strategy

Individual investment decisions are subject to Woodside's investment targets. Not guidance. Potentially includes both organic and inorganic investment.

Integrated carbon solutions

CARBON MANAGEMENT STRATEGY

1./

2.

ß.

Develop integrated carbon solutions to help our hydrocarbon business, new energy business and our customers

	OFFSETS	CARBON CAPTURE AND STORAGE (CCS)	CARBON TO PRODUCTS
FOCUS	Originate high integrity offset units and purchase from select third parties	Secure and accelerate CCS in Australia and beyond	Invest in technology advancement to convert carbon into useful products
BENEFITS	Available at scale now	Potential for large scale CO_2 storage	Future conversion of carbon at source of generation
PROGRESS	Executed plan to secure offsets to meet Woodside's 2030 net emissions reduction targets ^{1,2}	Awarded three permits to advance studies on carbon capture and storage in Australia ³	Collaborations with String Bio, ReCarbon and LanzaTech

Amount of offsets includes those currently held in offset accounts, forecast yield from forward contracts and offsets related to land purchased for carbon origination projects (but not yet fully implemented). The offsets include Australian Carbon Credit Units and voluntary market offset units.

Woodside equity emissions abatement demand is based on current and sanctioned projects at current equity share as well as near and medium term net equity Scope 1 and 2 greenhouse gas emissions targets. Refer to slide 20 for further information on Woodside's net emissions reduction targets.

The carbon capture and storage permits are subject to commercial agreements, regulatory approvals and being granted appropriate titles.

Hydrogen and ammonia solutions

HYDROGEN AND AMMONIA STRATEGY

Develop solutions and pursue technologies to assist our customers with their decarbonisation pathways

		HEAVY DUTY TRANSPORT	POWER	SHIPPING AND MARINE FUELS	INDUSTRIALS AND CHEMICALS
FOC	CUS	Decarbonisation of mobility sector (diesel substitution)	Decarbonisation of coal-fired power generation and longer term substitution of natural gas	Decarbonisation of maritime and supply chains	Provide lower carbon industrial feed stock and CCS in hard-to-abate sectors
BENE	FITS	Line of sight to diesel parity Operational benefits versus battery electric trucks	Diversifies supply and provides lower carbon power Potential to expand into combined cycle gas turbines	May enable lower carbon shipping corridors for bulk carriers	May enable progressive displacement of existing grey ammonia and hydrogen supply ¹
PROG	RESS	Long lead items ordered for H2OK	Joint feasibility study on ammonia supply chain from Australia to Japan	Exploring opportunities with potential partners and original equipment manufacturers	Exploring new opportunities across hard- to-abate sectors

A portfolio of new energy opportunities

Heliogen

Initial 5 MW concentrated solar energy system to prove concept of clean energy delivery with nearly 24/7 availability. Potential deployment to support our operations

H2OK

Proposed initial phase targeting up to 60 tonnes per day of liquid hydrogen leveraging existing network, a large portion which is wind-powered. Ideally located for US truck market

Woodside Solar Proposed solar facili

Proposed solar facility that could supply up to 100 MW to Pluto and other customers located near Karratha in Western Australia, with the potential to expand this facility to up to 500 MW as customer demand arises in the future

Perth

Southern Green Hydrogen

Proposal for renewable ammonia production facility, targeting up to 500,000 tonnes of ammonia per year

H2Tas

Proposal for renewable hydrogen production for export as ammonia to Asian markets

Proposal for a world-scale hydrogen and ammonia production facility. Land secured in industrial precinct with access to Asian and Australian markets

H2OK progressing towards FID

()

REGULATORY

Completed detailed geotechnical investigationsFEED activities underway

Electrolysis equipment supply contract awarded in October 2022

- Execute agreements for power and water supply
-) Award contract for liquification equipment supply
-) Award engineering, procurement, construction contracts

Targeting primary end use of heavy-duty trucks and equipment Progressing customer offtake discussions

Awarded contract for local support on regulatory approvals

- Assess Inflation Reduction Act incentives
- Progressing regulatory and environmental approvals

New energy value chain

The investment case – a global energy supplier

HIGH QUALITY PORTFOLIO

Scale, diversification and resilience to deliver enduring value

Framework established to optimise value and shareholder returns

Agile, flexible and adaptable as the world's energy mix evolves

Advantaged locations and markets

Conventional asset base weighted to LNG

Major growth projects in execution

Pipeline of opportunities

Resilient cash flow

History of strong dividends

Clear capital allocation and capital management frameworks

Strong balance sheet

Delivering **net emissions reduction** targets¹ Progressing **new energy** opportunities

Customer-led and scalable

Safe | Reliable | Low cost | Lower carbon | High cash generation

Woodside's net emissions reduction targets are for net equity Scope 1 and 2 greenhouse gas emissions, with a targeted reduction of 15% by 2025, 30% by 2030, with an aspiration of net zero by 2050. The net emissions reduction targets are relative to a starting base of the gross annual average equity Scope 1 and 2 greenhouse gas emissions over 2016-2020. The baseline will be adjusted for the assets acquired through the merger with BHP Petroleum and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with an FID prior to 2021.

11101

QUESTION AND ANSWER

Glossary

1.

2.

\$, \$m, \$B	US dollar unless otherwise stated, millions of dollars, billions of dollars
A\$, AUD	Australian dollar
ASX	Australian Securities Exchange
2P	Proved plus Probable reserves
2C	Best Estimate of Contingent resources
Bcf	Billion cubic feet
BHP Petroleum or BHPP	BHP Petroleum or BHPP means BHP Petroleum International Pty Ltd ACN 006 923 897 and, unless context otherwise requires, its subsidiaries. References to "BHP Petroleum International Pty Ltd" are to "BHP Petroleum International Pty Ltd" excluding its subsidiaries
boe, kboe, MMboe, Bboe	Barrel of oil equivalent, thousand barrels of oil equivalent, million barrels of oil equivalent, billion barrels of oil equivalent
Capital expenditure	Includes capital additions on oil and gas properties and evaluation capitalised
CCS	Carbon capture and storage
ccu	Carbon capture and utilisation
ccus	Carbon capture, utilisation and storage
CH ₄	Methane
CO ₂	Carbon dioxide
CO ₂ -e	CO ₂ equivalent. The universal unit of measurement to indicate the global warming potential of each of the seven greenhouse gases, expressed in terms of the global warming potential of one unit of carbon dioxide for 100 years. It is used to evaluate releasing (or avoiding releasing) any greenhouse gas against a common basis ¹
Conventional	Conventional resources exist in porous and permeable rock with pressure equilibrium. The hydrocarbons are trapped in discrete accumulations related local geological structure feature and/or stratigraphic condition
cps	Cents per share
Decarbonise	To avoid, reduce or offset greenhouse gas emissions. It can apply to both the production and the use of products and services.
EBIT	Calculated as a profit before income tax, PRRT and net finance costs
EBITDA margin	Calculated as a profit before income tax, PRRT, net finance costs, depreciation and amortisation and impairment divided by operating revenue

EBITDAX	Calculated as a profit before income tax, PRRT, net finance costs, depreciation and amortisation, impairment and exploration and evaluation expense
Equity greenhouse gas emissions	Woodside sets its Scope 1 and 2 greenhouse gas emissions reduction targets on an equity basis. This ensures that the scope of its emissions reduction targets is aligned with its economic interest in its investments. Equity emissions reflect the greenhouse gas emissions from operations according to Woodside's share of equity in the operation. Its equity share of an operation reflects its economic interest in the operation, which is the extent of rights it has to the risks and rewards flowing from the operation ²
FEED	Front-end engineering design
FID	Final investment decision
FPSO	Floating production storage and offloading
FPU	Floating production unit
Free cash flow	Cash flow from operating activities less cash flow from investing activities
Gearing	Net debt divided by net debt and equity attributable to the equity holders of the parent
GHG or greenhouse gas	The seven greenhouse gases listed in the Kyoto Protocol are: carbon dioxide (CO ₂); methane (CH ₄); nitrous oxide (N ₂ O); hydrofluorocarbons (HFCs); nitrogen trifluoride (NF ₃); perfluorocarbons (PFCs); and sulphur hexafluoride (SF ₆)
IRR	Internal rate of return
JCC	The Japan customs-cleared crude is the average price of customs-cleared crude oil imports into Japan as reported in customs statistics (also known as 'Japanese crude cocktail') and is used as a reference price for long-term supply LNG contracts
JV	Joint venture
KGP	Karratha Gas Plant
LNG	Liquefied natural gas
Lower carbon services	Woodside uses this term to describe technologies, such as CCUS or offsets, that may be capable of reducing the net greenhouse gas emissions of our customers
MMbbl	Million barrels
MMBtu	Million British thermal units
Mtpa	Million tonnes per annum
MW	Megawatt
MWh	Megawatt hour

See IFRS Foundation 2021: Climate Related Disclosures Prototype. Appendix A. World Resources Institute and World Business Council for Sustainable Development 2004. "GHG Protocol: a corporate accounting and reporting standard".

Glossary

2.

ß.

Net greenhouse gas emissions	Woodside has set its Scope 1 and 2 greenhouse gas emissions reduction targets on a net basis, allowing for both direct emissions reductions from its operations and emissions reductions achieved from the use of offsets. Net greenhouse gas emissions are equal to an entity's gross greenhouse gas emissions reduced by the number of retired offsets	
Net equity greenhouse gas emissions	Woodside's equity share of net greenhouse gas emissions	
Net zero	Net zero emissions are achieved when anthropogenic emissions of greenhouse gases to the atmosphere are balanced by anthropogenic removals over a specified period. Where multiple greenhouse gases are involved, the quantification of net zero emissions depends on the climate metric chosen to compare emissions of different gases (such as global warming potential, global temperature change potential, and others, as well as the chosen time horizon) ¹	
New energy	Woodside uses this term to describe energy technologies, such as hydrogen or ammonia, that are emerging in scale but which are expected to grow during the energy transition due to having lower greenhouse gas emissions at the point of use than conventional fossil fuels	
NGLs	Natural gas liquids	
NPAT	Net profit after tax	
NWS	North West Shelf	
Offsets	 Carbon offsets. Avoided GHG emission, GHG emission reduction or GHG removal and sequestration made available to another organisation in the form of a carbon credit to counterbalance unabated/residual GHG emissions Avoidance offsets: Offsets which result in the avoidance of GHG emissions that would otherwise occur without the protective actions implemented to generate the offset, for example, the avoidance of deforestation Reduction offsets: Offsets that result in a reduction of GHG emissions from an activity that is additional, for example, CO2 capture and geological storage Removal offsets: Offsets based on the withdrawal of GHG emissions from the atmosphere, for example through the use of GHG sinks or GHG removal technologies. Removal offsets are important in achieving net-zero emissions as they help remove and store residual emissions² 	
Operated and non-operated	Oil and gas joint venture participants will typically appoint one company as the operator, which will hold the contractual authority to manage joint venture activities on behalf of the joint venture participants. Where Woodside is the operator of a joint venture in which it holds an equity share, this report refers to that joint venture as being operated. Where another company is the operator of a joint venture in which Woodside holds an equity share, this report refers to that joint venture as being non-operated	

PRRT	Petroleum resource rent tax
RFSU	Ready for start-up
Scope 1 GHG emissions	Direct GHG emissions. These occur from sources that are owned or controlled by the company, for example, emissions from combustion in owned or controlled boilers, furnaces, vehicles, etc.; emissions from chemical production in owned or controlled process equipment. ³ Woodside estimates greenhouse gas emissions, energy values and global warming potentials in accordance with the National Greenhouse and Energy Reporting (NGER) methodology as applicable in FY20-21
Scope 2 GHG emissions	Electricity indirect GHG emissions. Scope 2 accounts for GHG emissions from the generation of purchased electricity consumed by the company. Purchased electricity is defined as electricity that is purchased or otherwise brought into the organisational boundary of the company. Scope 2 emissions physically occur at the facility where electricity is generated. ³ Woodside estimates greenhouse gas emissions, energy values and global warming potentials in accordance with the National Greenhouse and Energy Reporting (NGER) methodology as applicable in FY20-21
Scope 3 GHG emissions	Other indirect GHG emissions. Scope 3 is an optional reporting category that allows for the treatment of all other indirect emissions. Scope 3 emissions are a consequence of the activities of the company, but occur from sources not owned or controlled by the company. Some examples of scope 3 activities are extraction and production of purchased materials; transportation of purchased fuels; and use of sold products and services ³
Shareholder or Woodside Shareholder	A holder of Woodside Shares from time to time
T&T	Trinidad and Tobago
Tcf	Trillion cubic feet
TRIR	Total recordable injury rate
Underlying NPAT	Net profit after tax excluding any exceptional items
Unit production cost or UPC	Production cost divided by production volume
USD	United States dollar
Woodside	Woodside Energy Group Ltd ACN 004 898 962
Woodside Shares or Shares	Fully paid ordinary shares in the capital of Woodside
YTD	Year to date

1. / IPCC, 2018: Annex I: Glossary [Matthews, J.B.R. (ed.)]. In: Global Warming of 1.5°C.
