## ACQUISITION: CBH TO ACQUIRE TRANSFORMATIVE JAMES BAY AND NORTHWEST ONTARIO LITHIUM PROPERTIES

### Highlights

- **CBH to acquire 113km<sup>2</sup> of lithium exploration claims located within 20km of Patriot Battery Metals' (Patriot) Corvette property in the James Bay region of Quebec and a 70km<sup>2</sup> project in Northwestern Ontario near Frontier Lithium's (Frontier) PAK and Spark properties**
- **The Quebec property consists of four areas: Carmoy, Taiga, La Grande and Mago North**
- **The Carmoy project targets interpreted dyke structures (identified from aerial photography), 15km along strike to the north-west of Patriot Battery Metals' Corvette Project which has recently announced spectacular drilling results including: 156.9m @ 2.12% Li<sub>2</sub>O including 25m @ 5.04% Li<sub>2</sub>O<sup>1</sup>**
- **The Ontario project named McCoy Lake is a 70km<sup>2</sup> property 75km east of the Frontier Lithium properties**
- **Well timed acquisition, leading into the Canadian 2023 field work season allowing the Company to quickly commence exploration of identified targets**
- **Coolabah have received firm commitments for a \$1 million placement at \$0.10, a premium to the last traded share price of \$0.096**

Coolabah Metals Limited (ASX:CBH) ("Coolabah" or "the Company") is pleased to announce that it has entered into an agreement to acquire 100% of 4 highly prospective lithium exploration properties located within the prolific James Bay region of Quebec, Canada.

As part of the proposed acquisition CBH will acquire 100% of the share capital in Hampden Lithium Pty Ltd ("Hampden") which in turn owns 100% of the James Bay and Ontario lithium properties. The properties are not subject to any existing royalties.

The four James Bay properties (totalling 113km<sup>2</sup>), are located in close proximity to Patriot Battery Metals' (ASX:PMT) Corvette project, where recent drilling has identified a potentially world class spodumene deposit. The properties consist of:

**Carmoy:** located within 7km to the east of Patriot's Corvette property and 5km west of Cosmos Exploration's Corvette Far East project.

**Taiga:** Located approximately 9km north of Patriot's Corvette property; **Mago North:** 12km to the north and **La Grande** 20km to the north-west.

1. Patriot Battery Metals (ASX:PMT) – ASX Announcement  
January 19 2023

## INVESTOR UPDATE

### Coolabah Managing Director Cameron Provost, stated:

*“Lithium is becoming increasingly important as the world shifts towards renewable energy sources and electric transportation. As demand for these technologies grows, so too does demand for lithium.*

*The James Bay Region of Quebec, Canada is known for containing significant resources of lithium and this 100% acquisition positions Coolabah Metals as a player in the fast-growing lithium exploration market.*

*Quebec is a Tier 1 jurisdiction for mining and exploration. The Canadian government unveiled its Critical Minerals Strategy in 2019, which aims to position Canada as a leading global supplier of critical minerals. The strategy identifies 31 minerals, including lithium, as critical to the country’s economic growth and security, as well as to the global transition to a low-carbon economy.*

*We can already see in publicly available satellite images, structures that appear to be intrusive dykes about 10km along strike from Patriot’s Corvette Project. Early focus for Coolabah’s field work will be determining if these dykes contain lithium.*

*Timing of the acquisition is excellent, leading into the Canadian field season. Coolabah Metals looks forward to updating the market as testing of these structures unfolds.”*

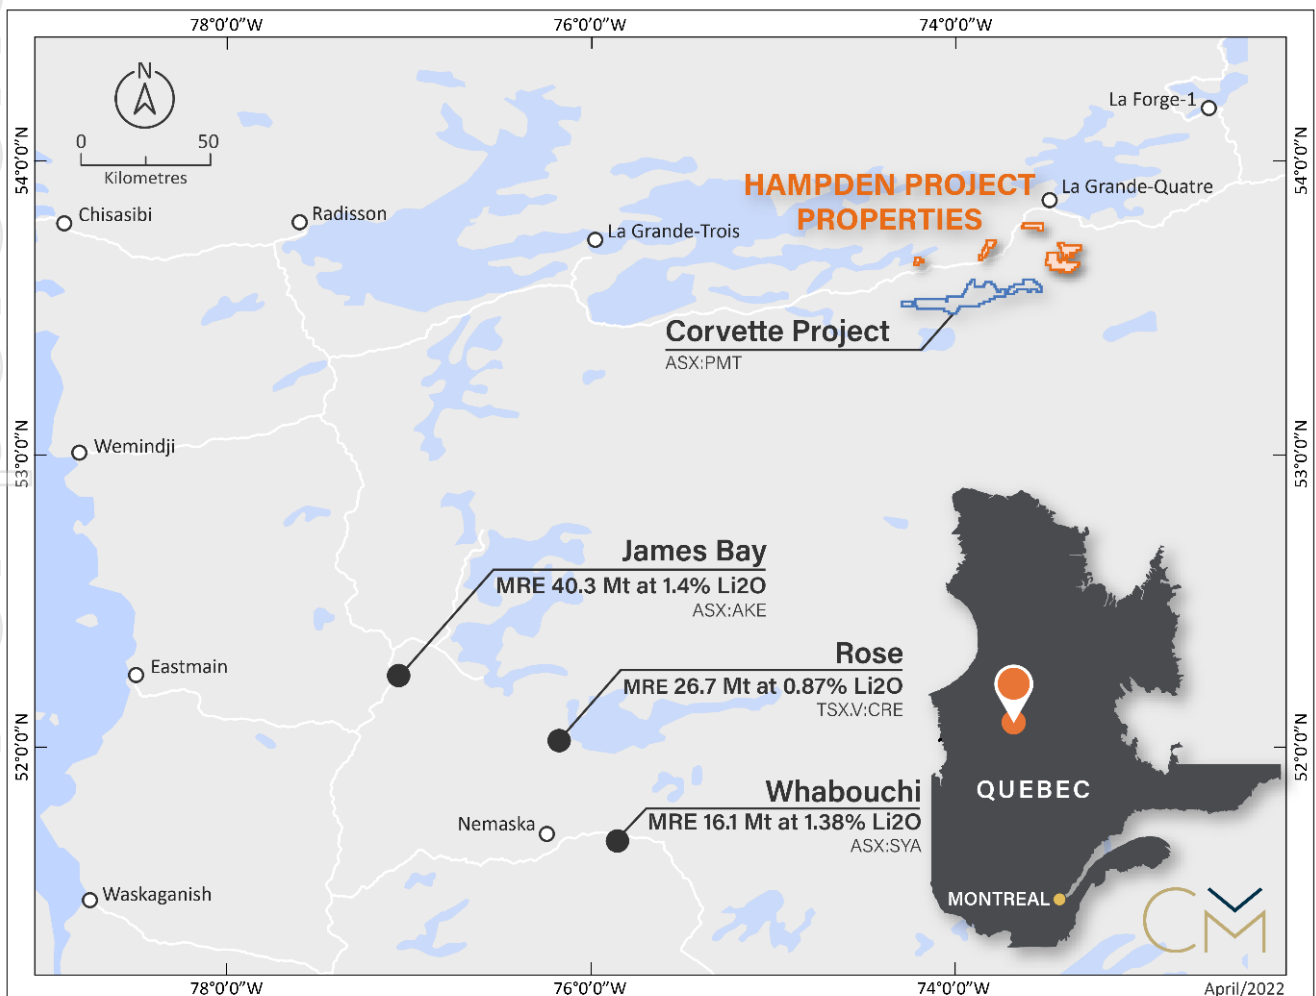

Figure 1: Hampden Project Location within the James Bay Region

## INVESTOR UPDATE

The James Bay Region is a prime investment opportunity for lithium exploration and production hosting several known spodumene bearing pegmatite projects. Québec's advantageous resource development sector, abundance of skilled labor and close proximity to thriving electric vehicle markets in North America and Europe make it an attractive destination for investment. Furthermore, the Canadian Government's recently unveiled Critical Minerals Strategy seeks to establish Canada as the leading supplier of sustainably and responsibly sourced critical minerals, including lithium.

**Figure 2: Hampden Project Claims** Highlighting interpreted trends of untested dykes within the Carmoy property relative to Patriot's Corvette Lithium Trend

## INVESTOR UPDATE

### Carmoy

The Carmoy property (75.8km<sup>2</sup>) has primarily been interpreted to be underlain by Neoproterozoic biotite-muscovite granites and biotite-magnetite bearing granites and tonalites. The property contains a mapped pegmatite outcrop in the south and a prominent linear dyke structure interpreted visible from aerial photography.

The identified linear structures are north-west along strike and in the same orientation as the known spodumene bearing pegmatite dykes at the Corvette Property to the south-west. The dyke structures (easily seen in aerial photos) represent a prime target for immediate mapping and sampling and are interpreted to be prospective to host lithium mineralisation.

### Taiga

The Taiga property (16.3km<sup>2</sup>) is a promising exploration area situated just 15 km north of Patriot Battery Metals' CV5 deposit. Mineralization on the CV trend coincides with the contact between the magnetic iron formation of the Guyer group and the tonalite formations. The Taiga project targets a similar interpreted contact between iron-rich Guyer formation and the overlying monzodiorite. This interpretation is supported by the subdued magnetic high located over the Taiga property.

### Mago North

The Mago North property (5.6km<sup>2</sup>) is located 25km west of Taiga and is underlain by Neoproterozoic tonalitic gneiss. The tonalitic gneiss is in contact with the Guyer group greenstones to the south of the claim block. One interesting feature of the project is the approximately 1.7-kilometer-long, unidentified northeast trending linear intrusive structure evident on the property.

Mapped pegmatite outcrop has been identified on the Mago North property.

### McCoy Lake, Ontario

The McCoy Lake project is an exciting exploration opportunity located in the Red Lake region of northwestern Ontario, Canada, covering a vast area of 70km<sup>2</sup>. It is 100% owned by Hampden, with no existing royalties. The Project is situated approximately 75km east of the Frontier Lithium (TSX.V: FL) PAK and Spark deposits, which total 58.4 Mt @ 1.50% Li<sub>2</sub>O (Indicated and Inferred over two deposits)<sup>2</sup> drill results in February 2022 include 322m @ 1.6% Li<sub>2</sub>O.<sup>3</sup>

The McCoy Lake project targets an underexplored greenstone assemblage, situated near fertile granite systems that are bounded by an interpreted fault toward the northeast. While a number of northwest trending structures are visible within the southern extend of the mapped greenstones, no field observations have been made on site as the area is generally covered by vegetation.

The project is located remotely in northwestern Ontario however year-round access is available through float or ski-equipped aircraft from Red Lake, Ontario, which is approximately 180km away.

2. Frontier Lithium (TSX.V: FL) – Company Fact Sheet ([https://www.frontierlithium.com/\\_files/ugd/dec7de\\_844a5e2cc2234a1babbbea1879ce5573.pdf](https://www.frontierlithium.com/_files/ugd/dec7de_844a5e2cc2234a1babbbea1879ce5573.pdf))

3. Frontier Lithium (TSX.V: FL) – February 1st, 2022 <https://mailchi.mp/frontierlithium/sprkxa>

## INVESTOR UPDATE

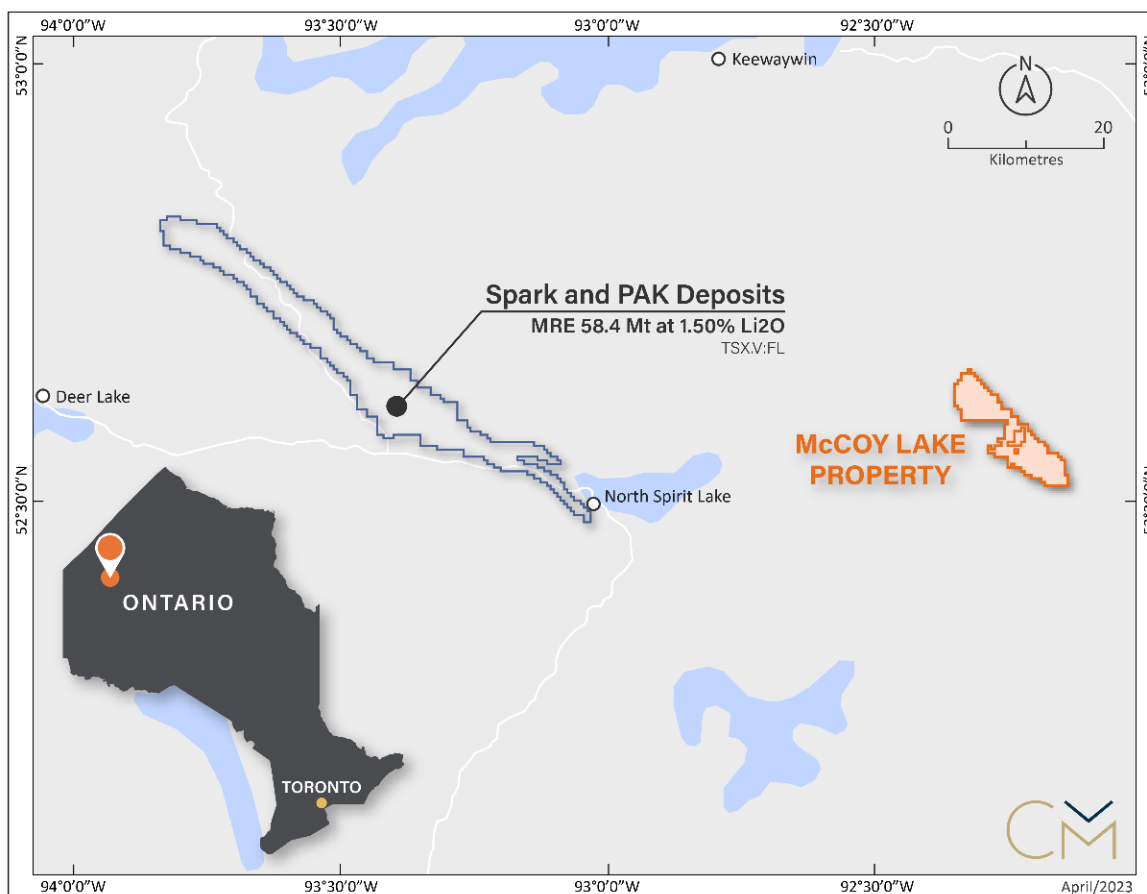

Figure 3 McCoy Lake Property 70km east of Frontier Lithium's Spark and PAK Deposits (TSX.V:FL)

### Acquisition Terms

The Company has entered into a binding agreement (Acquisition Agreement) to acquire 100% of the issued capital of Hampden Lithium Pty Ltd (Hampden) from the shareholder of Hampden (who are unrelated parties of the Company) (Vendors) for the purpose of acquiring a 100% interest in a number of mineral claims comprising three lithium exploration properties located in the James Bay region of Quebec, Canada and associated mining information (together, the Assets).

The key terms of the Acquisition Agreement are as follows:

- **Subject to satisfaction or waiver of the condition's precedent, the Company has agreed to issue (subject to shareholder approval) the following securities to the Vendors (or their nominees):**
  - a total of 10,000,000 fully paid ordinary shares in the capital of the Company; and
  - a total of 5,000,000 performance rights which convert into shares (on a 1:1 basis) upon the Company announcing assay results from rock chip samples collected in-situ from any of the Assets, which record a grading of at least 1% Li<sub>2</sub>O

## INVESTOR UPDATE

- **Settlement of the Acquisition Agreement is subject to and conditional upon satisfaction or waiver (as permitted) of the following conditions precedent:**
  - the Company completing due diligence on Hampden and the Assets to the reasonable satisfaction of the Company in its sole discretion;
  - the Company receiving evidence from Hampden (or otherwise being satisfied) that the Assets have been transferred to Hampden and Hampden is the sole legal and beneficial owner of the Assets;
  - the Company completing a capital raising of not less than \$1,000,000 through a placement of 10,000,000 shares to professional and sophisticated investors at an issue price of \$0.10 per shares (Capital Raising);
  - there being no breach of the warranties given by the Vendors;
  - the parties obtaining all necessary regulatory and shareholder approvals pursuant to the ASX Listing Rules, the Corporations Act 2001 (Cth) and their constituent documents, to allow the parties to lawfully complete the matters set out in the Acquisition Agreement; and
  - the parties obtaining all other necessary third-party consents, assignments and approvals to lawfully complete the matters set out in Acquisition Agreement (if any).

The Acquisition Agreement otherwise contains representations, warranties and other clauses that are considered standard for agreements of this nature.

### Capital Raising

The Company has received firm commitments from sophisticated and professional investors for the Capital Raising to raise \$1,000,000 (before costs) through a placement of 10,000,000 shares (**Placement Shares**) at an issue price of \$0.10 each. 4,905,000 Placement Shares will be issued pursuant to the Company's placement capacity under Listing Rule 7.1 and 5,095,000 Placement Shares will be issued pursuant to the Company's placement capacity under Listing Rule 7.1A.

The issue price of \$0.10 represents a 4.2% premium to the last trading price of \$0.096 on Thursday 27th April 2023 and a discount of 2.0% to the 15-day volume weighted average price of the Company's shares traded on ASX of \$0.102.

The Company engaged CPS Capital Group Pty Ltd (**Lead Manager**) to manage the Capital Raising. The Lead Manager will receive a fee of 6% of the amount raised under the Capital Raising (representing a cash fee of approximately \$60,000) and the Company will issue (subject to shareholder approval) the Lead Manager (or its nominees) 4,000,000 listed options exercisable at \$0.20 and expiring 12 December 2025 (ASX: CBHO).

## About Coolabah Metals Limited

Coolabah Metals Limited (ASX:CBH) is an ASX-listed minerals explorer with a focus on copper, gold and base metal assets throughout Australia. CBH aims to build shareholder wealth through the discovery and development of mineral deposits across various projects being the Coolabah Project, the Nymagee Project and the Gunpowder Creek Project (together, the Projects).

## Coolabah Project

The Coolabah Project area comprised of 1,177km<sup>2</sup>, lies adjacent to the Girilambone copper deposits including Avoca Tank, Tritton and the newly discovered Constellation Deposit. The Coolabah Project is highly prospective given that geology structures / regional settings are similar to known deposits.

## Nymagee Project

The Nymagee Project area totals 533.3km<sup>2</sup> and is located amongst significant discoveries at Federation, Hera and Nymagee and is highly attractive for Cobar Style Deposits. The Nymagee Project lies on a major north-easterly structure prospective for gold, copper, lead and zinc mineralisation.

## Gunpowder Creek Project

The Gunpowder Creek Project is located within the world class Mt Isa block, only 40km northwest of Mt Isa and is home to numerous historic workings over 5km and highlights high-grade rockchips up to 32g/t gold. The Gunpowder Creek Project is prospective for vein/fault hosted high grade gold and Mt Isa Copper-Lead-Zinc type mineralisation.

## Canington Project

The Canington Project is located 130km SSE of Cloncurry comprised of two exploration licences that covers a total area of 113.4km<sup>2</sup>. The main prospect within the Project is Brumby, being a copper-gold project spatially related to a strong magnetic high and interpreted to be an Iron Oxide Copper Gold (IOCG) style target.

**Competent Persons Statement**

The information in this document that relates to exploration targets, exploration results, mineral resources or ore reserves is based on information compiled by David Ward BSc, a Competent Person who is a Member of the Australasian Institute of Mining and Metallurgy (AUSIMM), (Member 228604). David Ward is a Director and shareholder of Coolabah Metals Ltd. David Ward has over 25 years of experience in metallic minerals mining, exploration and development and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaking to qualify as a 'Competent Person' as defined under the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Ward consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

**Forward-Looking Statement**

This document may include forward-looking statements. Forward-looking statements are only predictions and are subject to risks, uncertainties and assumptions which are outside the control of the Company. Actual values, results or events may be materially different to those expressed or implied in this document. Given these uncertainties, recipients are cautioned not to place reliance on forward looking statements. No representation is made that, in relation to the tenements the subject of this presentation, the Company has now or will at any time the future develop resources or reserves within the meaning of the Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves.

Any forward-looking statements in this presentation speak only at the date of issue of this document. Subject to any continuing obligations under applicable law, the Company does not undertake any obligation to update or revise any information or any of the forward-looking statements in this document or any changes in events, conditions, or circumstances on which any such forward looking statement is based.

## JORC Code, 2012 Edition – Table 1 report template

### Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> <li>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling or sampling has been completed by Coolabah.</li> <li>Data referred to in this release is based on geological interpretation of publicly available satellite/aerial photography and datasets from Québec's SIGEOM database.</li> </ul>
Drilling techniques	<ul style="list-style-type: none"> <li>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>No drilling has been completed on the Hampden or McCoy Lake Projects.</li> </ul>
Drill sample recovery	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling has been completed on the Hampden or McCoy Lake Projects.</li> </ul>
Logging	<ul style="list-style-type: none"> <li>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> <li>Whether logging is qualitative or quantitative in nature. Core (or</li> </ul>	<ul style="list-style-type: none"> <li>No drilling has been completed on the Hampden or McCoy Lake Projects.</li> </ul>

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>costean, channel, etc) photography.</li> <li>The total length and percentage of the relevant intersections logged.</li> </ul>	
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> <li>If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</li> <li>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</li> <li>Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling has been completed on the Hampden or McCoy Lake Projects.</li> </ul>
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>No assay data is reported.</li> </ul>
Verification of sampling and assaying	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> <li>The use of twinned holes.</li> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>No assay data is reported.</li> </ul>
Location of data points	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>Specification of the grid system used.</li> <li>Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling or assay data is reported.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"> <li>• <i>Data spacing for reporting of Exploration Results.</i></li> <li>• <i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i></li> <li>• <i>Whether sample compositing has been applied.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> </ul>
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none"> <li>• <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i></li> <li>• <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> <li>• Orientation of structures is based on interpretation of publicly available satellite/aerial photography.</li> </ul>
<i>Sample security</i>	<ul style="list-style-type: none"> <li>• <i>The measures taken to ensure sample security.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> </ul>
<i>Audits or reviews</i>	<ul style="list-style-type: none"> <li>• <i>The results of any audits or reviews of sampling techniques and data.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> </ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <li>• <i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></li> <li>• <i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></li> </ul>	<ul style="list-style-type: none"> <li>• A complete set of information relating to the mineral claims is provided in Appendix 1</li> </ul>
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> <li>• <i>Acknowledgment and appraisal of exploration by other parties.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No exploration targeting for lithium has been conducted on the claims.</li> </ul>
<i>Geology</i>	<ul style="list-style-type: none"> <li>• <i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>• The Carmoy Property is interpreted to be underlain by Neoproterozoic biotite-muscovite granites and biotite-magnetite granites and</li> </ul>

Criteria	JORC Code explanation	Commentary
		<p>tonalites. Dyke like structures visible from publicly available satellite/aerial photography are interpreted to be fractionated versions of the felsic granites.</p> <ul style="list-style-type: none"> <li>• The Taiga claims cover a contact between the magnetic iron formation of the Guyer Group and the tinalite formations, the contact provides a possible crustal weakness for fractionated dykes to intrude relating to the felsic granites.</li> <li>• The Mago North and La Grande claims are interpreted to be underlain by Neoarchean tonalite.</li> <li>• The McCoy Lake Project in Ontario is underlain by an underexplored greenstone assemblage.</li> </ul>
Drill hole Information	<ul style="list-style-type: none"> <li>• A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> <li>◦ easting and northing of the drill hole collar</li> <li>◦ elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>◦ dip and azimuth of the hole</li> <li>◦ down hole length and interception depth</li> <li>◦ hole length.</li> </ul> </li> <li>• If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> </ul>
Data aggregation methods	<ul style="list-style-type: none"> <li>• In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>• Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> <li>• The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> </ul>
Relationship between mineralisation widths and	<ul style="list-style-type: none"> <li>• These relationships are particularly important in the reporting of Exploration Results.</li> <li>• If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>• If it is not known and only the down hole lengths are reported, there</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling or assay data is reported.</li> <li>• The geometry if the dykes visible in the publicly available satellite/aerial photo imagery strike north-east south-west, dip and plunge of the features is unknown.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>intercept lengths</i>	<i>should be a clear statement to this effect (eg 'down hole length, true width not known').</i>	
<i>Diagrams</i>	<ul style="list-style-type: none"> <li>• <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Appropriate figures are included in the body of the announcement.</li> </ul>
<i>Balanced reporting</i>	<ul style="list-style-type: none"> <li>• <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i></li> </ul>	<ul style="list-style-type: none"> <li>• The release is considered to be balanced; all relevant information is included in the announcement.</li> </ul>
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"> <li>• <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i></li> </ul>	<ul style="list-style-type: none"> <li>• To the best of the Company's knowledge, no material exploration data or information has been omitted from this announcement.</li> </ul>
<i>Further work</i>	<ul style="list-style-type: none"> <li>• <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i></li> <li>• <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i></li> </ul>	<ul style="list-style-type: none"> <li>• On completion of the acquisition the Company will update the market with proposed future work programs. Reconnaissance mapping and sampling will take place prior to diamond drilling if results of sampling programs are favorable.</li> </ul>
