Vertexon in the payments process

- ▶ **Processing:** An Issuer (Change's client) using the Vertexon Platform (**technology only**) to manage their cards – client is the Issuer and cards can be issued on any card network supported by Vertexon
- ▶ **Processing & Issuing (P&I):** A client using the Vertexon Platform (**technology**) to manage their cards with Change as Issuer (**regulatory & licence**) – **Change** is the Issuer and cards are issued on the **Mastercard Network**

- 1** Processing: Customer pays with card (all card networks supported) & purchases goods/services from merchant
 P&I: Customer pays with a **Change** issued **Mastercard** & purchases goods/services from a merchant
- 2** Payment authenticated – the merchant point-of-sale system captures the customer's account information & securely sends it to the Acquirer (i.e. Merchant's bank)
- 3** Transaction submitted – merchant acquirer asks card network to get authorisation from customer's bank/issuer
- 4** Processing: Authorisation requested – card network submits transaction to the Issuer for authorisation
 P&I: Authorisation requested – card network submits transaction to **Change** (as Issuer) for authorisation
- 5** Processing: Authorisation response – using Vertexon Platform issuer authorises the transaction and routes the response back via the card network and acquirer
 P&I: Authorisation response - using the Vertexon Platform **Change** (as Issuer) authorises the transaction and routes the response back via the card network and acquirer
- 6** Processing: Settlement – card network debits the issuer and pays the acquirer who in turn makes payment to the merchant
 P&I: Settlement – card network (**Mastercard**) debits the issuer (**Change**) and pays the acquirer who in turn makes payment to the merchant
