Mukuyu-2 fluid sampling progress update

13 November 2023

HIGHLIGHTS

Preparing to commence running in hole to continue sampling operations following completion of tool checks

Invictus Energy Limited ("Invictus" or "the Company") is pleased to provide an update of drilling the Mukuyu-2 well at its 80% owned and operated Cabora Bassa Project in Zimbabwe.

Comments from Managing Director Scott Macmillan:

"Our fluid sampling operation has experienced a minor delay following the commencement of pipe conveyed logging operations due to a failure of the primary and backup sampling tools which occurred during the sample clean up (removal of drilling mud filtrate from reservoir to obtain a clean and representative fluid sample).

"The necessary replacement parts have now arrived on site and additional backups have been mobilised" over the weekend.

We are preparing to commence running in hole imminently to continue sampling operations following the completion of tool checks.

"The Company will provide an update once the sampling operation has been concluded."

About Invictus Energy Ltd (ASX: IVZ)

Invictus Energy Ltd is an independent upstream oil and gas company listed on the Australian Securities Exchange (ASX: IVZ). The Company is headquartered in Perth, Australia and has offices in Harare, Zimbabwe. Invictus is opening one of the last untested large frontier rift basins in onshore Africa – the Cabora Bassa Basin – in northern Zimbabwe through a high impact exploration programme.

Invictus Energy is committed to operating in a safe, ethical and responsible manner, respecting the environment, our staff, contractors and the communities in which we work.

***Cautionary Statement:** The estimated quantities of petroleum that may be potentially recovered by the application of a future development project relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration, appraisal and evaluation are required to determine the existence of a significant quantity of potentially movable hydrocarbons. Prospective Resource assessments in this release were estimated using probabilistic methods in accordance with SPE-PRMS standards.
