2. Net Performance figures assume reinvestment of dividends. Past performance is not a reliable indicator of future performance.

Commentary

The Company generated positive returns of 0.09% (pre-tax) for the month of December. The Goldman Sachs Commodity index was down 4% in December and fell 12% in 2023. The MSCI Commodity Producers index was up 3% in December and was flat for 2023. Commodities rounded out a mixed year on a mixed note, despite US Dollar weakness in December. Oil prices fell on continued oversupply concerns, lithium continued its downward trajectory, while iron ore, copper and coal all rose. The end of 'higher for longer' rates fears continue to boost growth stocks, and the relative value to cyclicals remains at all time wide and dislocated levels.

2023 ended up being very similar to 2019 with value significantly underperforming growth, despite no obvious fundamental reason. This sets the stage for what could be a strong 2024 for the Company because most commodities the portfolio is heavily exposed are to forecast to be in deficit. This could drive outsized returns like those the fund experienced in 2020. Deficits are not a guarantee for higher prices (as shown in the table to the right) but with continued demand acceleration for key portfolio exposures including copper, uranium and traditional energy, we believe the fundamentals could support higher prices in 2024, just as we saw in 2021 and 2022.

Market Balance vs Price Change

	Copper		Iron Ore	
	Balance	Price	Balance	Price
2000	Deficit	Higher	Deficit	Higher
2001	Surplus	Lower	Deficit	Higher

2023	Deficit	Lower	Surplus	Lower

Source: Wood Mackenzie, Jefferies

Main positive contributors in December for the Company included base and battery metals portfolio positions, which generated positive ~3.1% returns. The portfolio is skewed toward larger companies and positive contributors for the month included base metal producers Freeport McMoRan (+14.1%) and Alcoa (+26.6%) as well as diversified producers including South32 (+8.1%), Teck (+9.9%) and Glencore (+6.9%). We are confident these positions have potential to generate more upside because although our investment process is fundamental, we note that a number of these larger base metal producers, including Freeport, have recently moved above long-term averages. This technical analysis therefore supports our fundamental analysis that indicates higher returns are justified.

Source: Momentum Structural Analysis, LLC.

The main negative contributors for the month were precious metals and soft commodities positions which were down 1% and 2.9% respectively. Both were impacted by write-downs on unlisted equity positions from our independent valuation agent IHS. Total exposure to unlisted equity and credit positions is now 3.75% of total gross exposure. We remain confident on current positions and that we can generate alpha in the unlisted space, but for now the portfolio is heavily skewed to large, listed companies.

The portfolio is well positioned to generate positive returns in 2024, in our view, with many companies trading at significant discounts to our valuations. We remain confident that the themes to which the portfolio is most exposed can perform strongly in 2024 and based on fundamental, macro and positioning analysis, we are optimistic 2024 will be a good year for the strategy.

- Base & Battery Metals: ~60% gross long
- Uranium & Traditional Energy: ~40% gross long
