

550M DOWN DIP EXTENSION AT LADY JULIE NORTH 4.

After a significant 107% increase in overall resource in our Laverton Project to 22.7Mt @1.69g/t totalling 1.24moz of gold at 0.5g/t cut off and LJN4 increased by 317% from 204,000oz to 852,000oz, which was announced on November 23 2023 (Table 1), a number of deeper step out holes were carried out to see whether the LJN4 resource could be extended further at depth. Some compelling and exciting intersections are outlined below.

- MLDD033 intersected 16m at 4.51g/t from 411m, which was a very large 200m step out below the current resource (Figure 1). This intersection of 72 grammes is potentially underground mineable and is still open downdip. The section in Figure 1 indicates mineralisation continuity of 550m down dip, which is by far the biggest down dip extension identified to date within LJN4. This structure and mineralisation is expected to continue at depth within the Chatterbox shear, which is a regional scale structure that controls many deposits along its length including LJN4, Apollo, Beasley Creek and Wallaby. A seismic survey Magnetic completed (ASX Release 15 February 2021) shows a depth extent of 1.5km.

The above intersection in MLJDD033 occurs partly in a pyrite bearing black shale with intercalated carbonate and minor breccia, and partly in a pyrite-bearing carbonate with pyrite ranging from disseminated to semi-massive, which is a new style of alteration.

- New hanging wall mineralisation was also discovered in MLJD033 with an intersection of 2m at 15.32g/t from 247m, and 8.7m at 2.43g/t from 107m and 13m at 1.00g/t from 135m in MLJDD032. These hanging wall intersections are associated with a breccia zone and are planned to be followed up with RC drilling.
- MLJRCD826 intersected a 40m thick breccia zone from 270m-310m, which visually looks very promising and has assays pending (Figure 2 and 5). It is directly 65m down dip from MLJDD031 which intersected 21m at 5.37g/t from 198m within a breccia. This is in turn 50m down dip from MLJDD016, which intersected 30m at 5.53g/t from 145m, which is also within a breccia.

MLJRCD826 is a large step out and is outside the current resource which augers well for the next resource upgrade. MLJRCD826 is still open down dip and to the south and RC holes are being planned to follow up this promising thick breccia zone.

- MLJRCD802 intersected our best intersection to date, of 133m at 2.87g/t from 173m, which includes 61m at 4.68g/t from 243m (1m splits). Assays are awaited for the down dip extension within MLJRC820 from 290m to 453m (Figure 3).

For personal use only

- MLJDD034 intersected 6.8m @12.06g/t from 151m (contained within a 11.5m zone with 4.8m of core loss) in a gossanous chert breccia.

The multiple very thick intersections which often contain silica-pyrite and breccia alteration, are up to 50m thick. These are mainly within a 250m long central zone, which is still open to the south and east.

The central part of the 800m long LJN4 deposit has been infill drilled with very promising results. Highlights of this drilling are shown in Table 4, Figures 1-4.

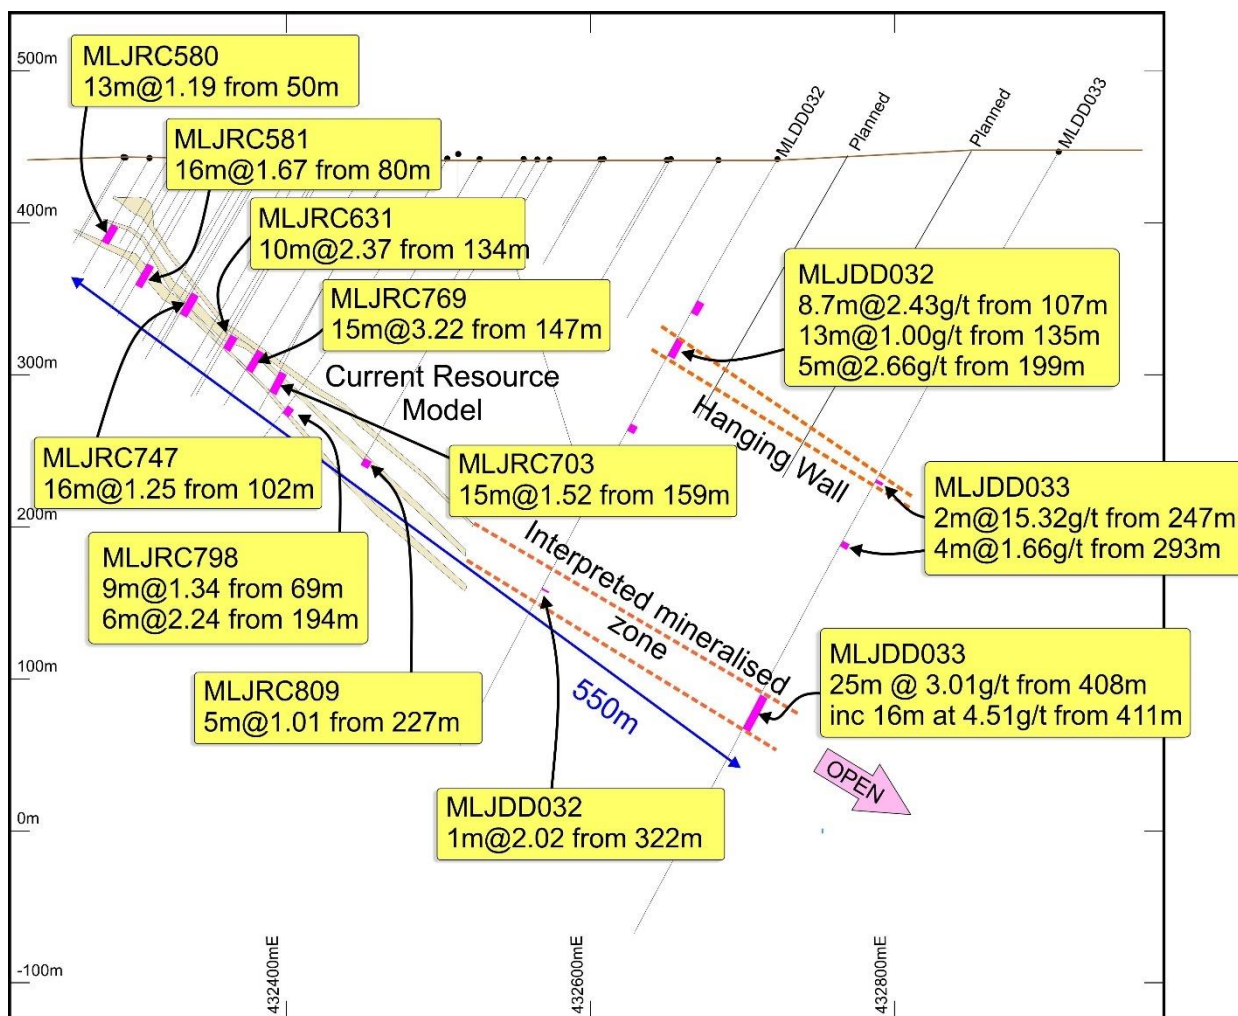

Figure 1. Cross section for LJN4 central area showing high-grade dipping gold zone containing resource model outline and MLJDD033 being a down dip extension of over 200m and being part of a very large 550m interpreted down dip extension.

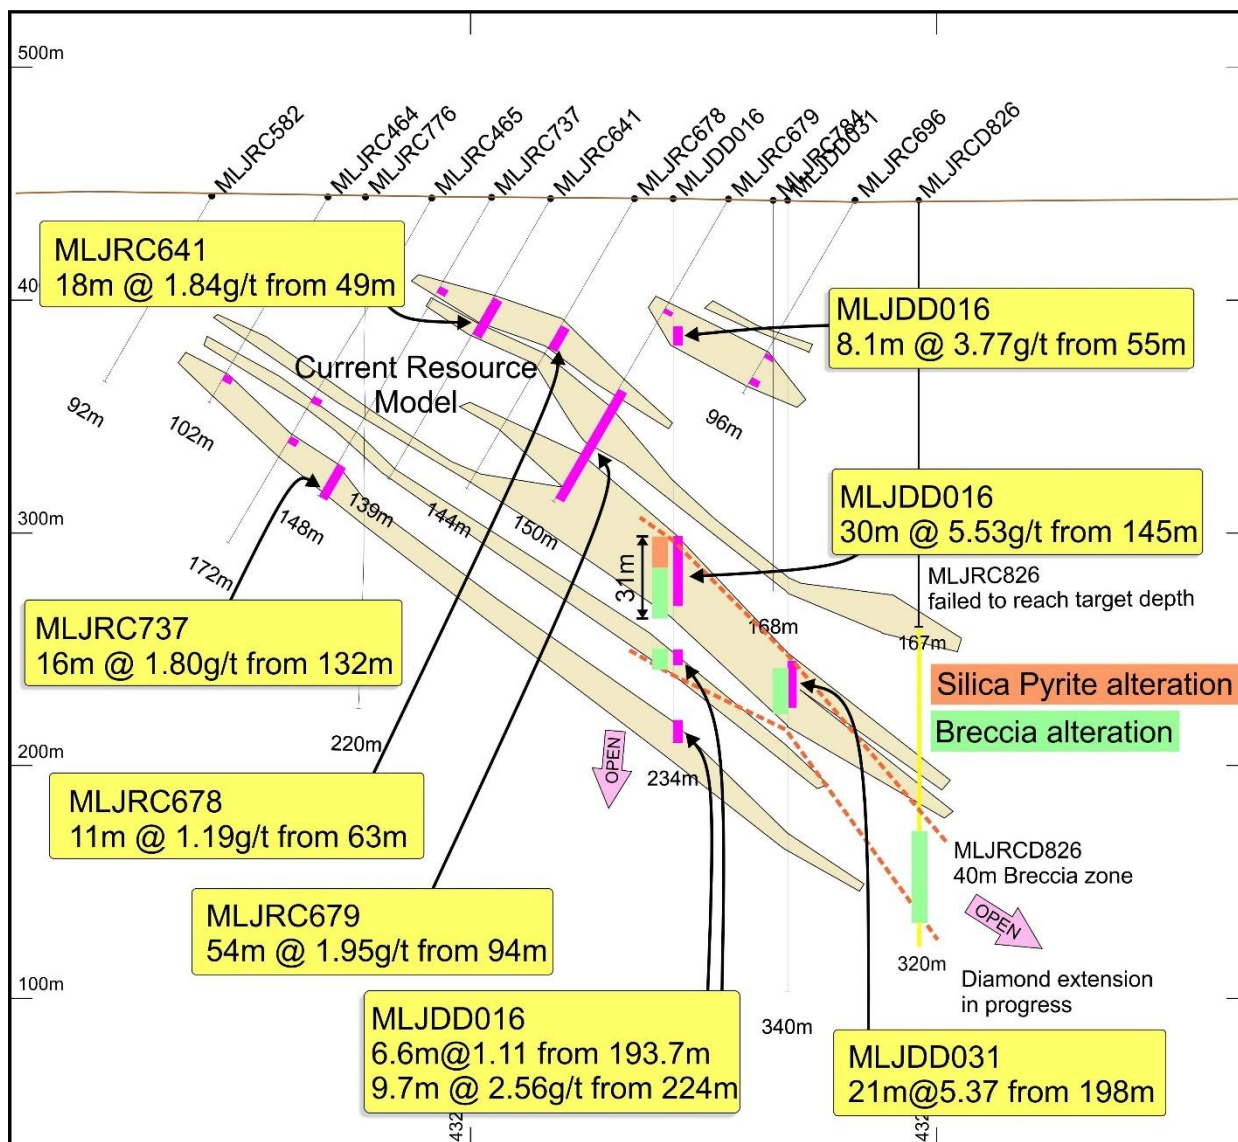

Figure 2. Cross section for LNJ4 centre area showing thickened high-grade dipping gold zone containing breccia and silica-pyrite alteration, resource model outline, thickened mineralisation in drill hole MLJRC679, breccia zone in MLJDD016 and MLJDD031 and depth extensions downdip with a thick 40m thick breccia in MLJRCD826, which is still open to the east with assays pending.

For personal use only

Figure 3. Cross section for LJN4 centre area showing thickened high-grade dipping gold zone containing breccia and silica-pyrite alteration, upper mineralised zone, resource model outline, thickened mineralisation in drill hole MLJRC779 and MLJRC806, Breccia zone in MLJDD015 and potential depth extensions downdip to the east and south.

Figure 4. The Lady Julie North 4 deposit has numerous significant thick intersections from the latest drill programme (yellow large rectangular label) and previous drilling (white label) with maximum gold projected to surface and planned deeper drillholes (in yellow).

Figure 5. MLJRC826 interval 271.6-276.0m, showing vuggy silica alteration and breccia within a large 40m thick breccia zone extending from 270-310m, with assays pending.

The follow up deeper RC/diamond holes tested and are looking to extend two and in some cases three stacked lodes found in the central, southern and northern parts of LJV4. Many of these are outside the existing resource and have potential for the enlargement of the LJV4 (Indicated and Inferred) of 13.1Mt at 2.02g/t for 852,600oz at a 0.5g/t cutoff (Table 1).

The updated combined (Indicated and Inferred) Mineral Resources estimate for the whole project area (Table 2) was announced recently on 23 November 2023, “Significant 107% increase of mineral resource ounces at Laverton” and include:

22.7mt @ 1.69g/t Au totalling 1,235,800oz of gold at 0.5g/t cutoff.

This represents an increase of 107% of the total ounces over the 3 February 2023 ASX Release.

Recent diamond drilling at LJN4 has revealed four distinct types of mineralisation:

Diamond drilling at LJN4 has revealed four distinct types of mineralisation:

- Vuggy silica and/or silica-pyrite mineralisation: this intense alteration destroys the nature of the protolith and comprises a porous network of silica veins and masses, with or without disseminated pyrite, in a clayey to sandy matrix.
- Polymictic breccia: a mixed breccia of chert, felsic porphyry, and ironstone (possibly after ferruginous or pyritic chert), sometimes with quartz or silica clasts, in a siliceous, ferruginous or pyritic matrix. The pyrite content is highly variable ranging up to semi-massive to massive in places.
- Silicified ultramafic: the footwall ultramafic sequence at LJN4 is mineralised in pale, bleached and silicified zones showing intense deformation (informally termed “visceral” texture) with or without quartz stockwork veining and with minor disseminated pyrite.
- Pyritic zones in crystalline sedimentary carbonate: This is a more subtle style of mineralisation comprising disseminations and irregular stringers of pyrite in the chert-carbonate sequence overlying the footwall ultramafics. Better intercepts of this style include 9.75m @ 2.56g/t from 224m at end of hole in MLJDD016 (section 6826310N) and 16m @ 4.51g/t from 411m in MLJDD033 (section 6826480N).

The recent intersection of the carbonate-hosted mineralisation at depth in MLJDD033 suggests that this style may become more important in the deeper parts of the LJN4 mineralised system, which has yet to be fully explored and defined.

Photos of the mineralisation types are attached and some examples of both breccia mineralisation and silica pyrite alteration in the MLJDD015 core trays with an overlaid gold content for each interval of core measured. The mineralisation appears to occur in a series of moderately east-dipping (45-50°) zones ranging from a few metres up to 52 metres in true width. Sometimes these zones appear to coalesce to form broader mineralised zones. The silica-pyrite and breccia mineralisation occur in an interdigitated sequence of massive chert and carbonate intruded by felsic porphyries. This sequence also dips moderately to the east. Strong thick breccia zones are also present within the Sunrise Dam Deposit owned by Anglo Ashanti where the breccia lodes carry significant higher-grade mineralisation are associated with a number of internal deposits. In most cases they are near vertical and link the sub horizontal major shear zones and can also be subparallel to the major mineralised shear zones near surface. The silicified ultramafic mineralisation occurs in an ultramafic unit in the footwall of the chert-carbonate sequence.

The Lady Julie North 4 deposit is only 2.5km North of the Lady Julie Central deposit which in turn is 2.5km NE of the HN9 deposit (Figure 6). These three areas are all shallow deposits and Lady Julie Central and HN9 start from surface and Lady Julie North4 from 30m depth, which provide low strip ratios and potential for economic ore that is open-cuttable and are effectively part of one mining centre.

Gold mineralisation at LNJ4 is hosted in a sequence of ultramafics, massive carbonate (marble) and chert intruded by felsic porphyries. This sequence is cut by a major N-S braided shear complex known as the Chatterbox Shear Zone (CSZ) which is known to host significant mineralisation to the north. Petrological studies are in progress to determine if the carbonate and chert units are in fact forms of intense carbonate and silica alteration associated with the CSZ.

The Chatterbox shear zone is a complex N to NNE-trending, east-dipping structural corridor which can be traced for some 22km extending from Magnetic Resources' southern boundary at Mt Jumbo and through Lady Julie North 4 and as far north as the Beasley Creek gold deposit on Magnetic's NE boundary (Figure 7). Within Magnetic's tenements the shear zone can be traced for a distance of 12km. The shear zone is interpreted to comprise a series of braided faults and shears within a corridor ranging from 100m to 250m wide and is interpreted to have formed as a reverse fault on the limb of the regional Margaret Anticline during the latter stages of its folding.

Importantly, this shear zone is closely associated with, gold mineralisation at several locations along its length including Magnetic's LNJ4 and Mt Jumbo deposit (Figure 7). This shear is gold rich and gold deposits further north of Magnetics tenements contains the Beasley Creek and Apollo deposits and is interpreted to extend south towards the world class Wallaby deposit. It is evident in aeromagnetic imagery and in gravity images (Figure 7), Previous seismic work completed by Magnetic also shows up the Chatterbox shear which has great depth extent of this 45 degree east dipping shear with a number of associated vertical faults.

Table 2. Total Mineral Resource at 0.5 g/t Au Cutoff

Source table from MAU ASX release “Significant 107% Increase of Mineral Resource ounces at Laverton Project 23 November 2023.”

| Classification | Au Cutoff | Tonnes | Au | Ounces |
|----------------|-------------|-------------------|-------------|------------------|
| Indicated | 0.50 | 10,400,000 | 1.74 | 584,400 |
| Inferred | 0.50 | 12,200,000 | 1.65 | 651,300 |
| Total | 0.50 | 22,700,000 | 1.69 | 1,235,800 |

Within the HN5, HN6, HN9 and Lady Julie areas there are many new shallow intersections (Figures 1-4 and Table 4) with a total of 2,590 intersections (ranging from 1 to 44m) greater than 0.5g/t Au, which includes 1221 greater than 1g/t Au, 471 greater than 2g/t Au, 246 greater than 3g/t Au and 152 greater than 4g/t Au.

At Hawks Nest 5, 6, 9 and Lady Julie extensive drilling programmes have been completed. (Tables 5 and Appendix), including 1,883 RC/RCD holes totalling 148,829m (average 79m depth), 37,455 1–5m composites and 26,252 1m splits, 302 AC holes totalling 12,125m, 3,049 2–6m composites and 294 1m splits and 20 Diamond holes totalling 4,702, the Geotech programme comprising 12 RC/RCD drillholes totalling 1,098m and 8 diamond holes totalling 776m and Hydrology programme comprising 6 RC drillholes totalling 874m.

This release is reporting on 1,066 2-4m composite samples and 1,047 1m splits from 31 RC drillholes (MLJRC795-800,802-816,821,823,825-827,831-835) and 1,770 ~1m core samples from 6 Diamond drillholes (MLJRCD820, MLJDD031 to 35).

Assays pending for MLJRC818, 819, 820 (290m to 453m), 826 and 828.

The nearby Sunrise Dam, Wallaby and Jupiter Gold Deposits have persistent internal shallow-dipping mineralised lodes that are often called shear zones or thrust zones, which are ubiquitous throughout these deposits and have been defined down to 1500m depth at the Wallaby deposit. At Sunrise Dam there are breccia zones which are associated with the deeper vertical deposits and also some of the shallower dipping deposits near surface. In addition, many discoveries in recent times have been made by drilling below 100m because the historical drilling was far too shallow. At HN5, 6, 9 and Lady Julie the average hole depth is only 79m providing tremendous scope for upside potential.

Managing Director George Sakalidis commented: "With the Australian gold price at record levels of \$3075 the Laverton Project Resources encompassing Lady Julie Central, Lady Julie North 4, HN9, Mt Jumbo and Homeward Bound South, are shaping up and have potential for large-scale shallow open-cuttable deposits and now after our recent drilling with strong depth potential now greater than 400m depth at LJNI4 (ASX releases 7/08/23, 31/07/23, 14/08/23, 22/08/23, 8/09/2023, 26/09/2023 and 2/11/2023).

We see up to three stacked zones within the centre and the southern end of LJNI4 and our new drilling completed within the central part of the 800m long LJNI4 deposit has been infill drilled and extended down dip with some outstanding results. **Our deepest drill hole MLJDD033, which was a 200m step out from our existing resource has a significant intersection of 16m at 4.51g/t from 411m, which is potentially underground mineable. Figure 1 indicates mineralisation continuity of 550m down dip, which is our largest down dip extension to date.**

Our latest 40m thick breccia zone between 270m-310m depth in MLJRCD826 is very promising and once again enlarges the scope of this area as it is open to the east and to the south. It is directly 65m down dip from MLJDD031 which intersected 21m at 5.37g/t from 198m within a breccia. This is in turn 50m down dip from MLJDD016, which intersected 30m at 5.53g/t from 145m, which is also within a breccia.

This central 250m long zone is very promising due to the excellent grades and thicknesses found here and the strong correlation with breccia and silica-pyrite zones, which are also prevalent in the world class Sunrise Dam deposit, which has both parallel to near surface shear zones and vertical going downwards into a number of their individual deposits.

This is an exciting time for the company having announced its Expanded Mineral Resource on 23 November 2023 and now looking to further increase the size the LJNI4 Resource by recent drill testing the thickened high-grade breccia zone and continuation at depth and to the east and NE within the new structural target. Concurrently, the Blue Cap studies are near completion, which provides the company with the ability to fast-track work approvals and publish the economics of the deposits. Continuing with global investment bank Jefferies, who are helping ongoing review opportunities to maximise shareholder value."

Table 3. Planned/in-progress Drilling at Lady Julie North 4

| Hole_ID | Easting MGAz51 | Northing MGAz51 | Depth metres | Dip degrees | Azimuth degrees | Hole Type | Tenement | Project |

41. Drilling commences at Lady Julie North 4. MAU Release 15 August 2022
42. Blue Cap Mining to undertake early works. MAU Release 14 September 2022
43. Mineralisation expands both to north and east at Lady Julie North 4. MAU Release 27 September 2022
44. Early Works progress at Laverton Project. MAU Release 24 October 2022
45. High grade thick intersections at Lady Julie projects. MAU Release 17 November 2022
46. Thickest intersections to date at Lady Julie North 4. MAU Release 21 December 2022
47. Positive metallurgical results from Lady Julie. MAU Release 25 January 2023
48. Expands mineral resource estimate. MAU Release 3 February 2023
49. Early works good progress at Laverton project. MAU Release 15 February 2023
50. Thick intersections remain open at depth at Lady Julie North 4. MAU Release 20 February 2023
51. Thickest intersection of 96m at 1.23g/t Au at Lady Julie North 4. MAU Release 11 April 2023
52. Further thick intersections and deeper drilling completed at Lady Julie North 4. MAU Release 14 June 2023
53. Best thick intersections to date of 60m at 3.6g/t from 96m at lady Julie North 4. MAU Release 23 June 2023
54. High-grade of 30m at 5.53g/t within 52m thick breccia zone. MAU Release 14 July 2023
55. Intersection of 31m at 3.5g/t from 160m extends Lady Julie. MAU Release 31 July 2023
56. 112m at 1.8g/t gold from 172m extends Lady Julie North 4. MAU ASX Release 7 August 2023
57. 40m at 7.2g/t Au from 192m extends Lady Julie North 4. MAU ASX Release 22 August 2023
58. 50m thick gold rich breccia and silica pyrite zones at LNJ4. MAU ASX Release 8 September 2023
59. Thick intersections extend mineralised zones at Lady Julie North 4. MAU ASX Release 26 September 2023
60. Best thick intersection to date 126m at 2.8g at LNJ4. MAU ASX Release 19 October 2023
61. Large Grade-Thickness Zone Highlighted at LNJ4. MAU ASX Release 2 November 2023
62. Significant 107% increase of Resource at Laverton Project. MAU Release 23 November 2023
63. Mining Lease Application over the Lady Julie North 4 Deposit. MAU ASX Release 13 December 2023

All of which are available on www.magres.com.au

This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward-looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

Table 4. HN5, 6, 9 and Lady Julie Significant Drilling Intercepts Gold >1g/t with >2g/t highlighted.

JORC Code, 2012 Edition – Table 1 report

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

| Criteria | JORC Code explanation | Commentary |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sampling techniques | <ul style="list-style-type: none"> • <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> • <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> • <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> • <i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i> | <ul style="list-style-type: none"> • For RAB sampling, 1m completed by Duketon (A22722) • For RAB sampling, 4m composites completed by Gwalia (A29728) • For AC sampling, 4m composites and 1m splits completed by Metex (A62445, A72419) • For RC sampling, 2m composites completed by Julia Mines (A18060) and 5m composites completed by Placer (A34935) • All the reported historical drilling and their relevant sampling procedures, QAQC and analytical methods etc. are referred to in the original WAMEX reports (references in the main text of ASX release of 7 November 2018). • The targets at Lady Julie and HN9 have been tested by RC drilling and more recently at Lady Julie by diamond drilling. • Sampling and QAQC procedures are carried out using Magnetic’s protocols as per industry sound practice. • RC drilling was used to obtain bulk 1 metre samples from which composite 4m samples were prepared by spear sampling of the bulk 1m samples. 3kg of the composite sample was pulverized to produce a 50g charge for fire assay for gold. The assay results of the composite samples are used to determine which 1m samples of 3kg taken from the rig’s cyclone and splitter are selected for fire assay using the same method. The cyclone and splitter are cleaned regularly to minimize contamination. • Diamond drill core was cut in half and 1m intervals submitted for fire assay using the same method as the RC drill samples. |
| Drilling techniques | <ul style="list-style-type: none"> • <i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger,</i> | <ul style="list-style-type: none"> • Rotary air blast (RAB) drilling with a blade bit. • Reverse Circulation (RC) drilling was carried out |

|---------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <p>parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</p> <ul style="list-style-type: none"> Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. | <p>laboratory.</p> <ul style="list-style-type: none"> Internal standards and duplicates are used by the NATA registered laboratory conducting the analyses. |
| Verification of sampling and assaying | <ul style="list-style-type: none"> The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data. | <ul style="list-style-type: none"> No independent verification of drill intersections has yet been carried out. Twin holes are planned to be drilled. Primary data is entered into an in-house database and checked by the database manager. No adjustment of assay data other than averaging of repeat and duplicate assays No verification of historically reported drilling has been carried out |
| Location of data points | <ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control. | <ul style="list-style-type: none"> Drill collars located by hand- held GPS with an accuracy of +/- 5m and subsequently are being surveyed with a differential GPS with an accuracy of +/- 5cm. Grid system: MGAz51 GDA94. Topographic control using regional DEM data and over selected areas using a drone survey. |
| Data spacing and distribution | <ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied. | <ul style="list-style-type: none"> RC drilling was carried out at HN9 and Lady Julie using drill spacings ranging from 40m x 20m to 20m x 20m and at LJN4 down to 20m x 10m.. The data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource estimation procedure and classification applied. RC sample compositing into 4m composites has been used and followed up with 1m sampling where composite grades are greater than 0.2g/t Au. |
| Orientation of data in relation to geological structure | <ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. | <ul style="list-style-type: none"> Drilling at Lady Julie and HN9 has been carried out orthogonal to strike and across a generally east-dipping sequence. Detailed structural controls at Lady Julie have yet to be confirmed but no sampling bias has been identified to date. |
| Sample security | <ul style="list-style-type: none"> The measures taken to ensure sample security. | <ul style="list-style-type: none"> Samples were stored in the field prior to dispatch to Perth using a commercial freight company. |
| Audits or reviews | <ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. | <ul style="list-style-type: none"> No audits or reviews of the sampling techniques and data from historical drilling have been carried out. |

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

| Criteria | JORC Code explanation | Commentary |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Mineral tenement and land tenure status</i> | <ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. | <ul style="list-style-type: none"> Lady Julie is situated on P38/4346 and P38/4379-4384. HN9 is situated on exploration Licence E38/3127, M38/1041 and P38/4126. All these tenements are held 100% by Magnetic Resources NL. All the above are granted tenements with no known impediments to obtaining a licence to operate. |
| <i>Exploration done by other parties</i> | <ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. | <ul style="list-style-type: none"> Lady Julie and HN9 have been subject to historical exploration, refer to text |
| <i>Geology</i> | <ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. | <ul style="list-style-type: none"> Lady Julie: Various mineralization styles including silicified and stockworked felsic porphyry, silicified and stockworked ultramafic and silica-pyrite alteration in both felsic porphyry and ultramafic. HN9: Two mineralization styles have been observed: quartz veining and stock working in felsic porphyries and shear-hosted quartz veins on porphyry-amphibolite contacts. |
| <i>Drill hole Information</i> | <ul style="list-style-type: none"> A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length. If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. | <ul style="list-style-type: none"> Refer to table in the text of this release. |
| <i>Data aggregation methods</i> | <ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate | <ul style="list-style-type: none"> No weighting or cutting of gold values, other than averaging of duplicate and repeat analyses. |

For personal use only

| Criteria | JORC Code explanation | Commentary |
|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <p>short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</p> <ul style="list-style-type: none"> The assumptions used for any reporting of metal equivalent values should be clearly stated. | |
| Relationship between mineralisation widths and intercept lengths | <ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). | <ul style="list-style-type: none"> Mineralisation widths at Lady Julie are interpreted to range from 70% to 80% of true width. Mineralisation widths at HN9 are interpreted to range from 80% to 100% of true width. |
| Diagrams | <ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. | <ul style="list-style-type: none"> Refer to text. |
| Balanced reporting | <ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results. | <ul style="list-style-type: none"> Plus 1g/t Au intersections from the RC drilling have been reported in this release (Table 5) |
| Other substantive exploration data | <ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. | <ul style="list-style-type: none"> Metallurgical results refer to ASX Release 27/10/2020 Positive metallurgical results from Hawks Nest 9 and ASX Release 25/01/2023 Positive metallurgical results from Lady Julie. |
| Further work | <ul style="list-style-type: none"> The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. | <ul style="list-style-type: none"> Table 4 shows the drilling planned for four diamond holes for 1,610m and 2 RC holes for 450m. Further deep drilling at LJN4 will be further assessed once all the results have been received from the assay lab. As outlined in this release. A map and table of the proposed RC drilling is shown in this release. |
