Exploration

SensOre is working on a pipeline of promising lithium projects with Abbotts North being the premier exploration project hosting outcropping lithium bearing pegmatites.

Safety and Environment

SensOre conducted field exploration activity with no reportable ESG related incidents in the quarter.

Abbotts North Project

All heritage and environmental approvals are on track to facilitate first pass drilling in February 2024 with site mobilisation scheduled for 29 January 2024. Drilling will be undertaken by Precision Drilling Pty Ltd. The RC program is designed to drill test a series of outcropping lithium bearing pegmatite units along ~500-600m of strike length within the main Buttamahia Prospect area. The pegmatites show previously reported grades of up to 1.25% Li₂O at surface. Approximately 2,000m of RC drilling is planned to test for lithium mineralisation continuity at depth and assess pegmatite scale, geometry and mineralogy.

Abbotts North Lithium Project

SensOre has also completed the first pass lithium targeted soil geochemistry program at the Abbotts North project for a total of 600 samples. Factor analysis (FA) was employed at Abbotts North with the purpose of identifying multielement signatures within the soil assay samples which may be indicative of Li mineralisation. The work was successful in identifying spatial and geochemical associations between lithium mineralisation and mapped geology. The results from the soil survey highlighted new areas of interest with anomalous responses comparable to the geochemical signature over the main lithium bearing pegmatite field. The soil anomalism also correlates with prominent structural contacts and corridors.

Subsequent ground truthing of the prioritised soil anomalism located ~2km Southeast of the main lithium bearing pegmatites confirmed the presence of discreet sub-cropping pegmatites in the vicinity of the anomaly. The full strike extent of these new pegmatites could not be determined due to shallow cover.

Yalgoo Project

SensOre and battery minerals explorer Firetail Resources Limited (FTL, Firetail or the Company) (ASX: FTL) announced a farm-in agreement on tenement E59/E2252, a part of the Firetail Yalgoo Lithium Project ("Yalgoo") in Western Australia. SensOre can earn up to 80% of lithium rights on E59/E2252 by spending \$3.5m in two stages and additional consideration of up to \$600,000 on delivery of a maiden mineral resource estimate and pre-feasibility study.

Other Projects

SensOre received notice that the MinExCRC had agreed to conduct drilling on SensOre's Moonera Project, exploration licence E69/3724, at no cost to the company under the National Drilling Initiative.

SensOre relinquished several projects as part of its focus on lithium exploration. Although key geological area selection criteria were met, the projects did not meet technical and economic Key Decision Points (KDPs) and were removed from the portfolio. This approach of rapid testing of targets and a focus on demonstrated fertility and economic results is industry best practice and fundamental to SensOre's exploration portfolio management approach.
