ASX ANNOUNCEMENT
31 January 2024

QUARTERLY REPORT

For the Period Ending 31 December 2023

HIGHLIGHTS

RADISSON EAST AND SAKAMI LITHIUM PROJECTS – QUÉBEC, CANADA

- Prospectivity analysis completed during the quarter, key outcomes include:
  - **18 Lithium-Caesium-Tantalum (LCT) pegmatite target areas** across the Sakami Lithium Project (**Figure 2**); and
  - **Six LCT pegmatite target locations** across the Radisson East Lithium Project (**Figure 3**).

- Analysis of high-resolution satellite imagery has **identified a significant number of potential LCT pegmatite outcrops** with several high priority targets confirmed for follow-up

- The multispectral analysis identified the Sakami South claim package as having the highest prospectivity, and is underlain by geological units that are highly prospective for hosting LCT pegmatites

REDSTONE AND GALAN LITHIUM JOINT VENTURE - JAMES BAY PROJECTS AND ONTARIO PROJECTS

- Redstone has expanded its Canadian lithium footprint via a strategic **JV with Galan Lithium Ltd (ASX:GLN) to acquire 100% of the Taiga, Camaro and Hellcat Lithium Projects (James Bay Lithium Projects)** located in the heart of the world class James Bay Lithium Province (**Figure 7**)

- Initial exploration on the James Bay Lithium Projects completed by Axiom Exploration **identified 28 prospective pegmatite dykes**

- The James Bay Lithium Projects cover 5,187 hectares adjacent to the Patriot Battery Metals (TSXV:PMET) CV8 pegmatite discovery – **which has returned average sampling grades of 4.6% Li_2O**

ATTWOOD LAKE LITHIUM PROJECT- NORTHWESTERN ONTARIO, CANADA

- Assay results received from 209 rock grab samples collected from the Phase 1 exploration program for lithium (Li) and rare-earth element (REE) bearing pegmatites indicate elevated Li is present

- The mineralogy and geology observed across the entire Property is permissive to host potentially anomalous lithium concentrations

Redstone Resources Limited (ASX: RDS) (**Redstone** or the **Company**) is pleased to provide its quarterly report for the period ending 31 December 2023 (the **Quarter**).

A summary of the key operational and corporate developments achieved during the Quarter is outlined below. Further details on these developments can be reviewed in the corresponding ASX announcements reported by the Company.

MANAGEMENT COMMENTARY

Commenting on the December quarter, Chairman Richard Homsany said:

"Redstone continued to make steady progress during the December quarter, headlined by the acquisition of a highly prospective suite of lithium projects in the James Bay Province and Northwest Ontario. Redstone has now established a considerable footprint in the James Bay and Ontario lithium districts which are home to several Tier-1 lithium projects. Our increased exposure to Canadian lithium is highly complementary to our plans for the West Musgrave Copper Project in Western Australia.

Work completed at the Radisson East and Sakami Projects during the quarter has clearly demonstrated the strong potential for LCT mineralised pegmatites to be hosted within our James Bay tenement package. A significant number of high priority Lithium-Caesium-Tantalum (LCT) pegmatite target areas have now been confirmed across Radisson East and Sakami, providing a great foundation for exploration success this year. At the Attwood Lake Project in Ontario our initial exploration campaign confirmed several pegmatite outcrops and elevated lithium levels across the project area, which provides us with significant encouragement moving forward.

We enter 2024 with good momentum and look forward to reporting updates from our pipeline of exploration and evaluation activity at regular intervals."

RADISSON EAST AND SAKAMI LITHIUM PROJECTS – JAMES BAY, QUÉBEC, CANADA

In July 2023 Redstone secured an option to acquire a 100% interest over the highly prospective Radisson East and Sakami Lithium Projects immediately providing the Company with a strong position in the prolific James Bay Lithium district in Québec, Canada.

The Radisson East and Sakami Projects cover over 50km of greenstone belt strike length, which is geology that is known to host spodumene-bearing pegmatites throughout the world class James Bay Lithium district. Greenstone belts are the key host geology at each high-grade lithium project nearby including Corvette, Cancet and the Mia Lithium Project (**Figure 1**).

The Sakami Lithium Project (68 km^2) consists of three claim blocks within the La Grande sub-province situated approximately 14 km north of the boundary between the La Grande and Opinaca sub-provinces, in a similar geological setting as the Corvette (Patriot Battery Metals), Cancet (Winsome Resources Ltd.) and Adina Lithium Deposits (Winsome Resources Ltd.) lithium deposits, which all occur 10 to 20 km north of the boundary (**Figure 1**).

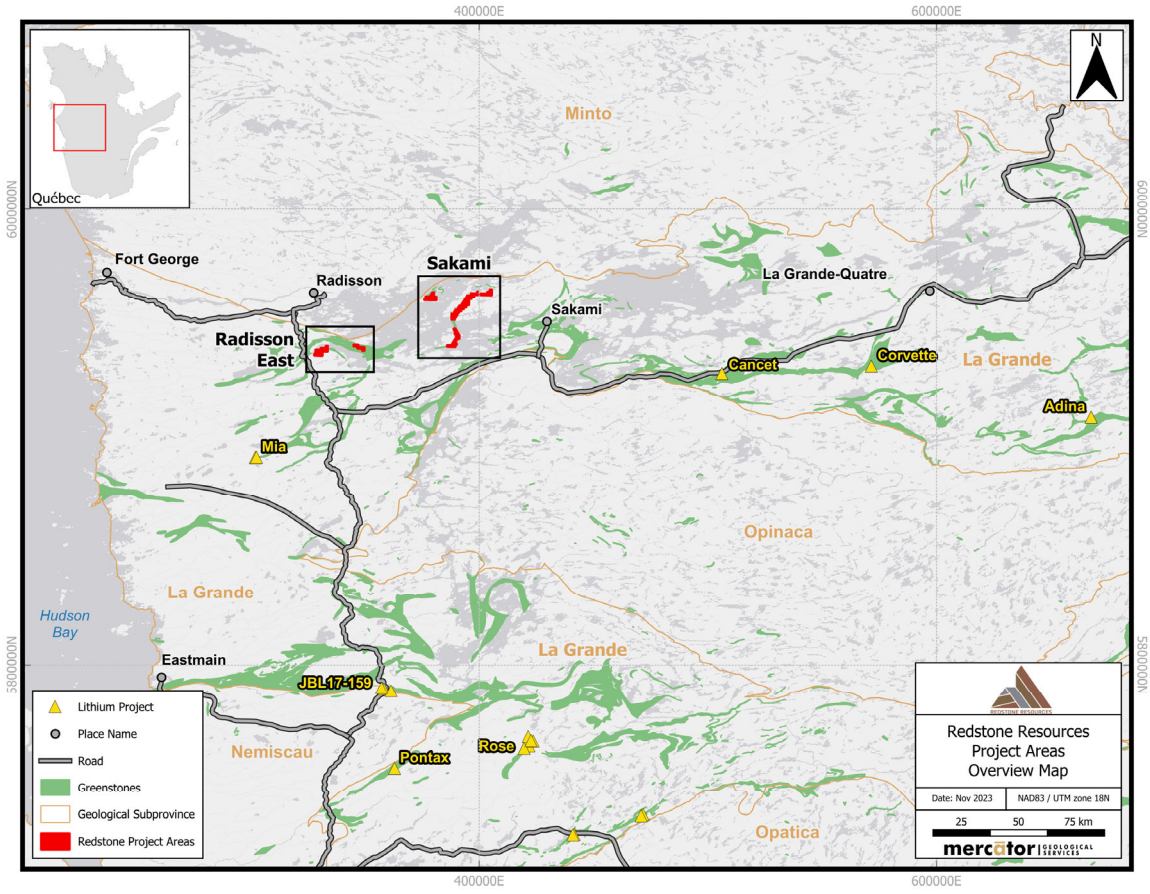

Figure 1: *Radisson East and Sakami Lithium Project location map*

Prospectivity Analysis Complete

During the Quarter Redstone retained Mercator Geological Services Limited (**Mercator**) to complete their proprietary prospectivity analysis method on the Sakami and Radisson East Projects. The prospectivity analysis identified a significant number of high priority Lithium-Caesium-Tantalum (**LCT**) pegmatite target areas, including eighteen (18) target areas and six (6) target areas respectively on the Projects.

The primary purpose of this prospectivity analysis was to identify priority lithium targets within the Projects to guide further exploration. The prospectivity model used was designed on the LCT pegmatite deposit model of Černy & Ercit (2005)[1], and review of data from the known lithium deposits in the area. The final version of the prospectivity map consisted of 79 input layers of data sourced from the Government of Québec's Geomining Information System (SIGÉOM) that were used to calculate the prospectivity weightings. The model was designed to highlight the best lithium targets where favourable structure, lithology, mineralisation, and LCT pegmatites geochemistry occur.

Key outcomes from the prospectivity analysis are summarised below:

[1] Černý, Petr & Ercit, T. Scott. (2005). The classification of granitic pegmatites revisited. The Canadian Mineralogist. 43. 2005-2026. 10.2113/gscanmin.43.6.2005.

Sakami Lithium Project:

- Generated eighteen (18) target areas that are prospective for LCT pegmatites across the Sakami Lithium Project, (**Figure 2**).
- The two easternmost claim blocks follow a north-south trend of elevated prospectivity scores, and the northwestern-most claim block is highlighted by an elevated prospectivity score along its northern boundary (**Figure 2**).
- The north-south trend of prospectivity appears to be associated with amphibolite and paragneiss units along north-northeast-trending faults.
- The highest priority targets on the Sakami Lithium Project are targets S01 through S04 to the south end of the Project towards the La Grande-Opinaca sub-province boundary.
- Targets S08 and S09 (**Figure 2**), lying towards the La Grande-Minto geological boundary in the northeastern most claim block, appears to be associated with favourable lithology and structure that is commonly associated with LCT pegmatites in the James Bay area.

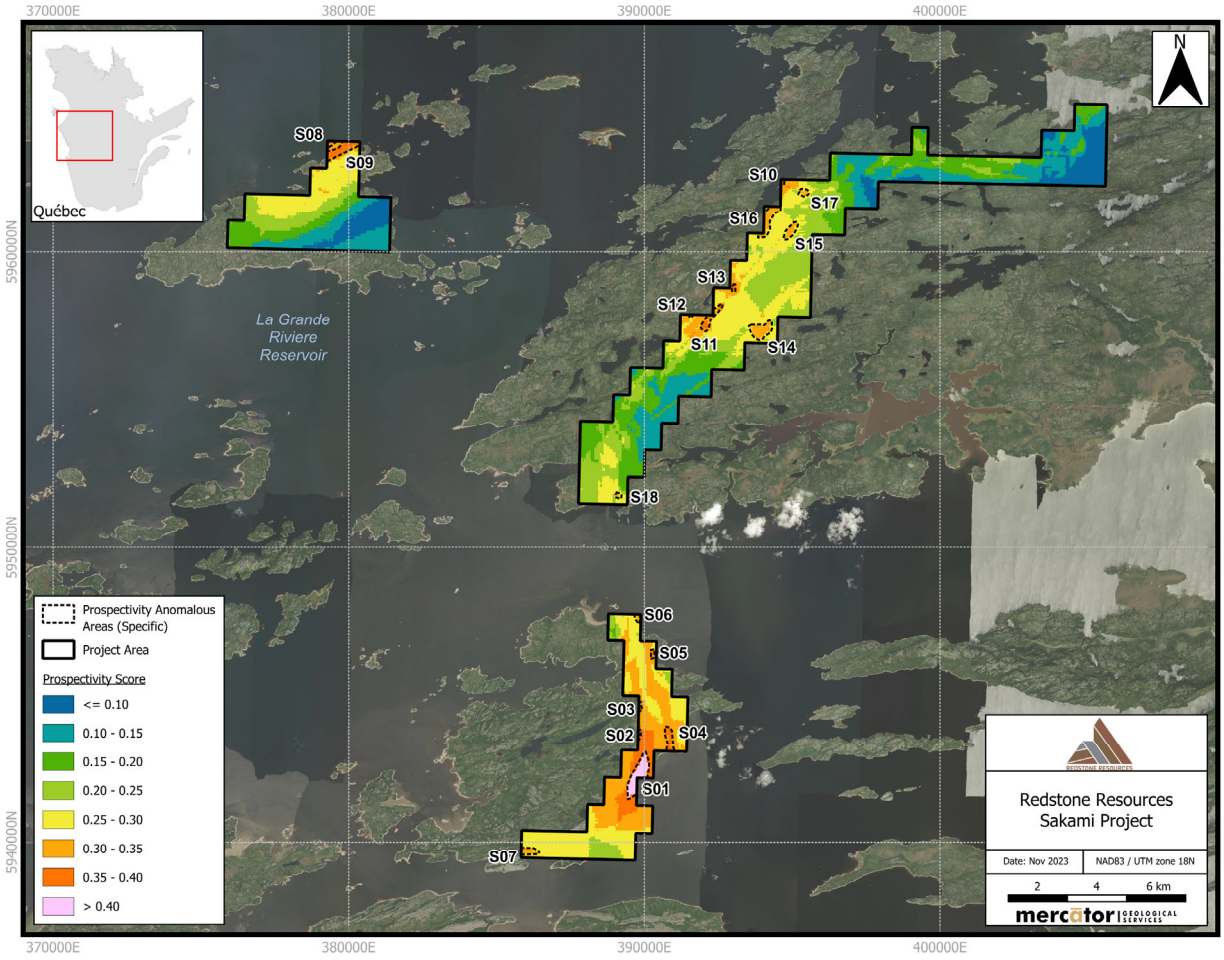

Figure 2: *Prospectivity analysis of Sakami Lithium Project*

Radisson East Lithium Project:

- The prospectivity analysis has generated six (6) target areas for prospective LCT pegmatites across the Radisson East Lithium Project (**Figure 3**).

- The easternmost claim block follows a northwest trend of elevated prospectivity and includes targets RE01 and RE02 (**Figure 3**). The westernmost claim block follows a northeast trend of lower but slightly elevated prospectivity scores and includes targets RE03 through RE06 (**Figure 3**). These trends of elevated prospectivity both follow basalt units that underly both claim blocks.

- The highest priority targets on the Radisson East Lithium Project are RE01 and RE02. Although all six targets occur within basalt, RE01 and RE02 are further elevated above the other target areas by increasing low level geochemical anomalism that is associated with LCT pegmatites towards the northeast.

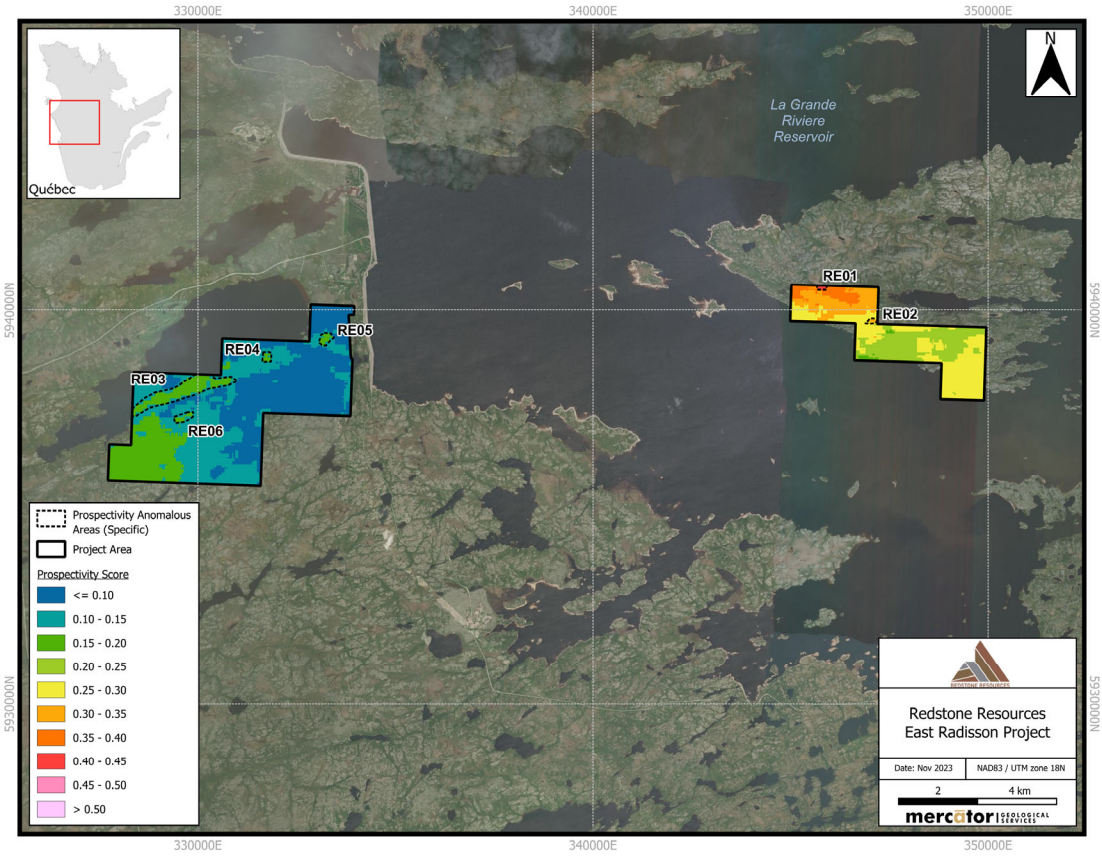

Figure 3: *Prospectivity analysis of Radisson East Lithium Project*

Multispectral Analysis Complete

In addition to the prospectivity analysis completed by Mercator, Redstone engaged consultant Dr. Neil Pendock (**Dirt Exploration**) to complete multispectral analysis over the Projects, of data collected from Sentinel-2 in 2021 along with ALOS-1 satellite in 2009.

Results from the multispectral analysis confirmed the identification of mapped areas over the two Projects corresponding to several exploration targets interpreted to potentially correspond to LCT pegmatites.

The satellite-derived hyperspectral data can detect rocks of interest that lie on the surface, or buried a few centimetres below the surface beneath vegetation, soil, or till. This technique is very useful in the James Bay region because the area is heavily vegetated.

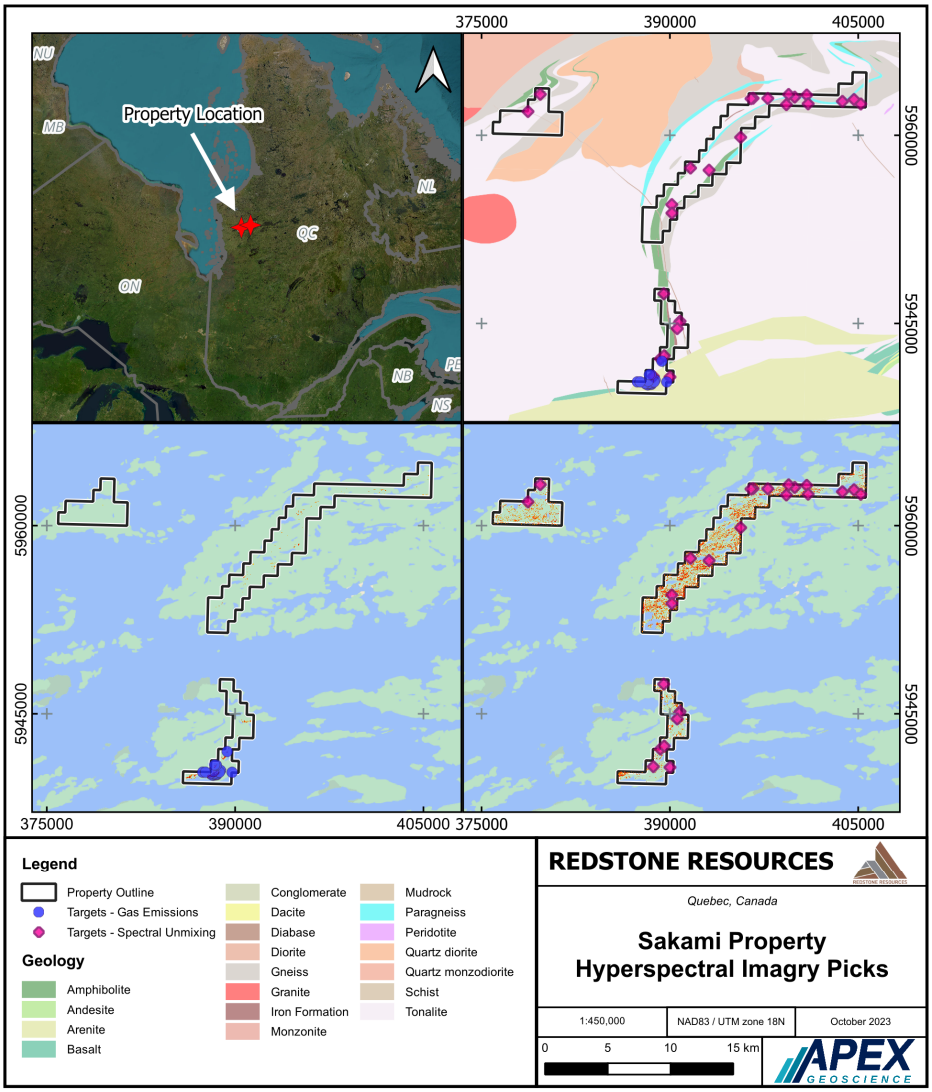

Figure 4: *Results from hyperspectral imagery of the Sakami Property. Heat maps for areas of high interest are in provided for spectral unmixing (bottom right; endmembers spodumene, quartz, zoisite, and rhodonite) and gas emissions (bottom left; methane). High priority targets are shown as purple and red circles.*

A thorough review of the hyperspectral work has resulted in the identification of high priority targets that require follow-up field examination, these are shown by the blue and purple symbols in **Figures 4 and 5**. The Sakami Project, specifically Sakami South, shows the highest prospectivity across the claim packages.

Full technical details of the multispectral analysis can be reviewed in the ASX announcement dated 6 November 2023.

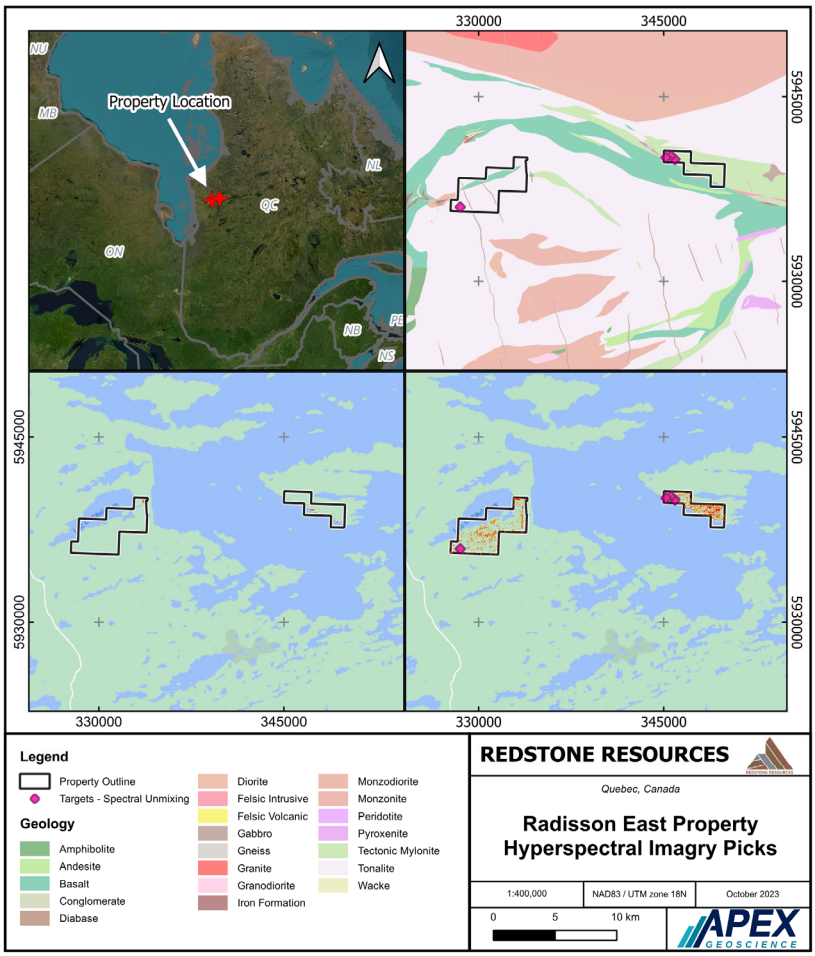

***Figure 5**: Results from hyperspectral imagery of the Radisson East Property. Heat maps for areas of high interest are in provided for spectral unmixing (bottom right; endmembers spodumene, quartz, zoisite, and rhodonite) and gas emissions (bottom left; methane). High priority targets are shown as purple and red circles.*

Maiden Exploration Program

The Radisson East and Sakami Projects are known to host several pegmatite outcrops, but no lithium-focused work has been conducted to date, and thus no lithium-bearing occurrences have yet been noted. Multiple target areas have been identified based on the aforementioned targeting criteria and confirmed using aerial imagery.

In addition to the indicator mineralogy, the Projects are located along trend of the Cancet Project (Winsome Resources Ltd (ASX:WR1)) and Corvette (Patriot Battery Metals Inc.(TSXV:PMET)).

Preparations and planning, and liaison with First Nations has commenced for an inaugural field program to assess the highest prospectivity target areas identified from the prospectivity analysis, in conjunction with the significant number of potential LCT pegmatite outcrop targets identified by the multispectral analysis.

The first pass programme will include field mapping, outcrop sampling and geochemical sampling to verify the presence of pegmatite outcrops and to test for lithium mineralisation.

JAMES BAY LITHIUM PROJECTS AND ONTARIO LITHIUM PROJECTS – RDS AND GLN JV (50/50)

During the Quarter Redstone announced that it had entered into an exclusive binding agreement to acquire 100% of the Camaro, Taiga and Hellcat Projects (the **James Bay Lithium Projects**) as part of a 50/50 unincorporated joint venture (**JV**) with ASX-listed Galan Lithium Ltd (ASX: GLN) (**Galan**) (see ASX announcement dated 4 October 2023).

***Figure 6**: Location of the Projects the subject of the JV between Redstone Resources and Galan Lithium Limited. The PAK Lithium Projects are located in Northwest Ontario and while the Taiga-Hellcat-Camaro lithium projects are located in James Bay, Quebec, Canada*

These new James Bay Lithium Projects collectively comprise **5,187 hectares of tenure located in the world-class James Bay Lithium Province**, host to several advanced lithium projects and new lithium discoveries in Québec, Canada (**Figure 6**). Encouragingly, the new James Bay JV projects are located adjacent to Patriot Battery Metals (TSXV:PMET) emerging CV8 and CV13 pegmatite discoveries (**Figure 7**).

PMET's **CV8 pegmatite** is a high-quality new hard rock lithium discovery, with grab **samples averaging 4.6% Li_2O**, and is located only 1.4 km north of the Taiga Project, and PMET's newly-discovered CV13 pegmatite cluster is located 1.5 km north of the Camaro Project (**Figure 7**).

Further, the JV has also secured an option to acquire 100% of the PAK East and PAK Southeast Lithium Project (the **PAK Lithium Projects**) comprising **1,415 hectares in *Ontario's Electric Avenue*** near Frontier Lithium Inc's (**Frontier**) PAK Lithium Project.

Highlighting the prospectivity of the Electric Avenue province, Frontier previously reported an intersection of **108.4m of continuous pegmatite averaging 2.12% Li_2O from its Spark Pegmatite**[5] (see Frontier's TSX-V announcement dated 25 September 2023).

Redstone will be the manager of the JV.

James Bay JV: Project Summaries

Taiga and Camaro Projects

The Taiga and Camaro project properties are situated in the Meso-Archean to Paleoproterozoic La Grande Subprovince of the Superior Provence. The Corvette Pegmatite series is hosted in the Mesoarchean Guyer Grupe, which is dominantly a meta-basalt (greenstone). The Taiga and Camaro projects are underlain by the Poste Le Moyne and Langelier plutons, respectively. The Camaro project is hosted in the Semonville Pluton with local windows of the Rouget Formation metabasalt. The properties are hosted in hornblende biotite diorite, quartz-rich diorite, biotite hornblende tonalite, granodiorite, granite, conglomerate, wacke, and amphibolite. Pegmatite dykes range from cm-scale irregular anatectic sweats to locally 5m wide dykes traced up to 200 m in length. The dykes are comprised of plagioclase feldspar, potassium feldspar, quartz, and minor biotite with local tourmaline and muscovite.

Hellcat Project

The Vieux Comptoir Granitic suite contained within the properties is believed to be the source of the spodumene-bearing pegmatite dykes found within the region. The properties host multiple greenstone belts. The primary greenstone within the Hellcat Project is Amphibolites of the Rouget greenstone belt, a similar age to the Grupe de Guyer greenstone belt, located within Patriot Battery Metals Corvette discovery. Additionally, the Corvette Shear Zone transects the property roughly E-W, creating an additional zone of weakness for pegmatite emplacement within the greenstone belt.

Exploration Summary: Geological Sample Collection

During October 2022, Infinity Stone Ventures contracted Axiom Exploration Group (**Axiom**) to complete basic geologic reconnaissance and assess the prospectivity of the Taiga-Camaro-Hellcat properties.

Axiom collected eleven (11) samples from the Taiga property, twelve (12) samples from the Camaro property and forty-seven (47) from the Hellcat Tenement. Overall, sixty-one (61) samples were classed as pegmatite (See **Figure 7**). Pegmatite samples were collected from outcropping dykes ranging from 30cm to 2.5m thick. The samples from the Hellcat properties host the greatest concentration of prospective dykes as multiple dykes have been encountered at one outcrop.

Most of the assay data provided show encouraging geochemical trends indicative of fractionation commonly associated with pegmatite mineralisation (e.g. trends to very low ratios of K/Rb, Mg/Li, and Nb/Ta), while two pegmatite samples show Ta values above 100 ppm.

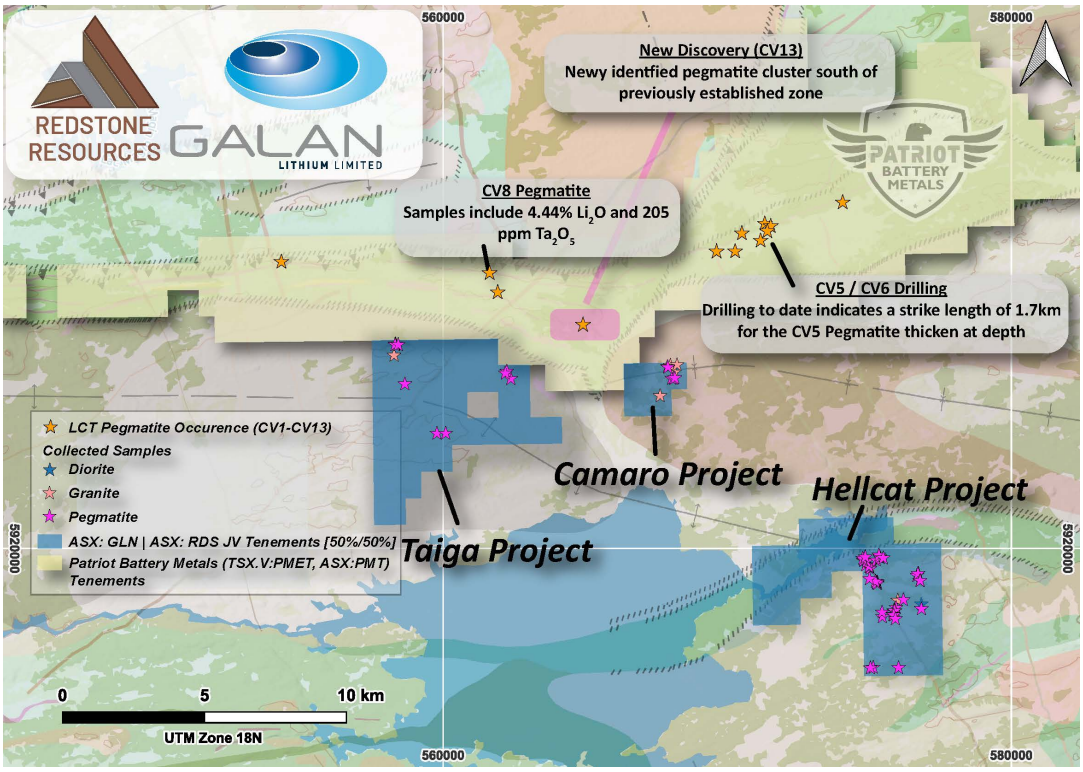

***Figure 7**: Location of the Taiga-Camaro-Hellcat (TCH) properties in James Bay. Figure highlights PMET's recently reported LCT Pegmatite Occurrences. Blue, Pink and Purple stars indicate samples collected by Axiom Exploration within the TCH tenements.*

ONTARIO PROJECTS – PAK SOUTH AND PAK SOUTHEAST (PAK LITHIUM PROJECTS)

In addition to the acquisition of the James Bay Lithium Projects, the Redstone and Galan JV has entered into an option to acquire 100% of the PAK South and PAK Southeast claims located approximately 170 km north of Red Lake, Ontario, in the Red Lake Mining Division. Several pegmatite units have been identified in regional mapping by the Ontario Geological Survey (OGS)[2] on the PAK South and PAK Southeast properties which cover 1,258 hectares and 157 hectares, respectively.

The PAK Lithium Projects are adjacent to Frontier's (TSX.V:FL) PAK Lithium Project, which includes two lithium deposits, the Spark Deposit and PAK Deposit, and two other prospects[3] (See **Figure 8**).

On February 16, 2022, Frontier announced it encountered "405 metres of 1.5% Li_2O" at its Spark Deposit[4]. Frontier's PAK Deposit hosts a mineral resource in measured and indicated categories of 6.68Mt @ 2.02% Li_2O and inferred of 2.67Mt @ 2.29% Li_2O. In comparison, the Spark Deposit hosts an indicated resource of 14.4Mt @ 1.40% Li_2O and an inferred resource of 18.1Mt @ 1.37% Li_2O[3, 5].

[2] Ontario Geological Survey Precambrian Geology of Whiteloon Lake, Map P.3224.

[3] Frontier Lithium Inc. (TSX.V:FL) News Release dated March 1, 2022, "Frontier Lithium successfully converts Inferred Resource to 14 million tonnes of Indicated Resource on the Spark Deposit"

[4] Frontier Lithium Inc. (TSX.V:FL) News Release dated February 16, 2022, "Frontier Drills 405 Metres of 1.5% Li_2O from Phase X Drilling at Spark".

[5] NI 43-101 Technical Report for the PAK Lithium Project in Northwest Ontario, prepared for Frontier Lithium Inc, April 9, 2021.

Frontier has recently announced (**September 25, 2023**) a 108.4-metre intercept of pegmatite at the Spark Deposit with Li_2O values averaging 2.12%[6].

The PAK Lithium Projects are located near the Bear Head Lake Fault, which is the dominant structural feature in the region and has been traced for over 140 km from northwest-southeast within the PAK Lithium Projects. The Bear Head Lake Fault Zone appears to be the locus for a peraluminous suite of granitic plutons. Nine major plutons consisting of two mica granites (fertile granites) are documented over the 140 km strike length of the fault. Fertile granites are interpreted to be the parental rocks that give rise to rare metal pegmatites[3].

The PAK Lithium Projects are located in the heart of Ontario's "Electric Avenue", in the vicinity of Avalon Advanced Materials Inc. (TSX:AVL) (OTCQB:AVLNF) recently announced lithium battery metals refinery.

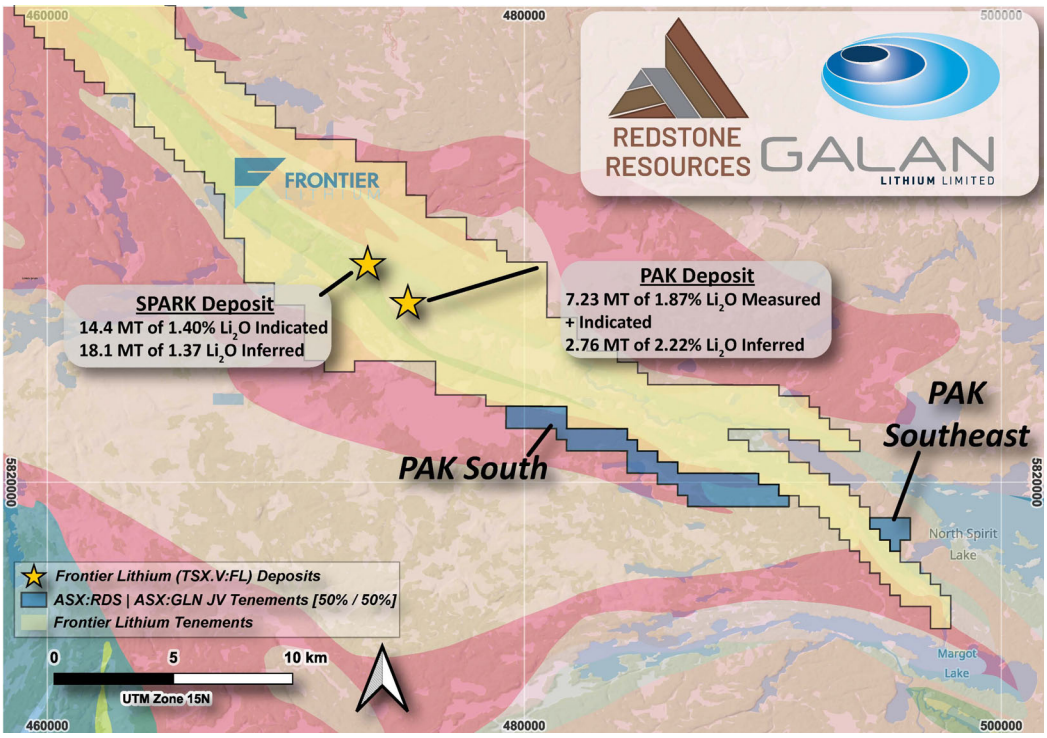

***Figure 8**: Location of the PAK South and PAK Southeast properties in Ontario's Electric Avenue. The figure highlights proximity to Frontier Lithium Inc's SPARK and PAK lithium deposits.*

[6] Frontier Lithium Inc. (TSX.V:FL) News Release dated September 25, 2023, "Frontier Lithium Intersects 108.4 m of 2.12% Li_2O on the Spark Pegmatite and Grant Options"

ATTWOOD LAKE LITHIUM PROJECT- NORTHWESTERN ONTARIO, CANADA

In May 2023 the Company entered into an exclusive agreement to acquire a 100% interest in the Attwood Lake Lithium properties (the **Attwood Lake Project**) which are considered highly prospective for Lithium (Li) and/or rare element pegmatites.

The Attwood Lake Project which comprises 17 claims for a total tenure of 7,393 hectares is located in Northwestern Ontario, Canada (**Figure 9**) where numerous lithium deposits and advanced lithium projects have documented to host significant resources of Li_2O.

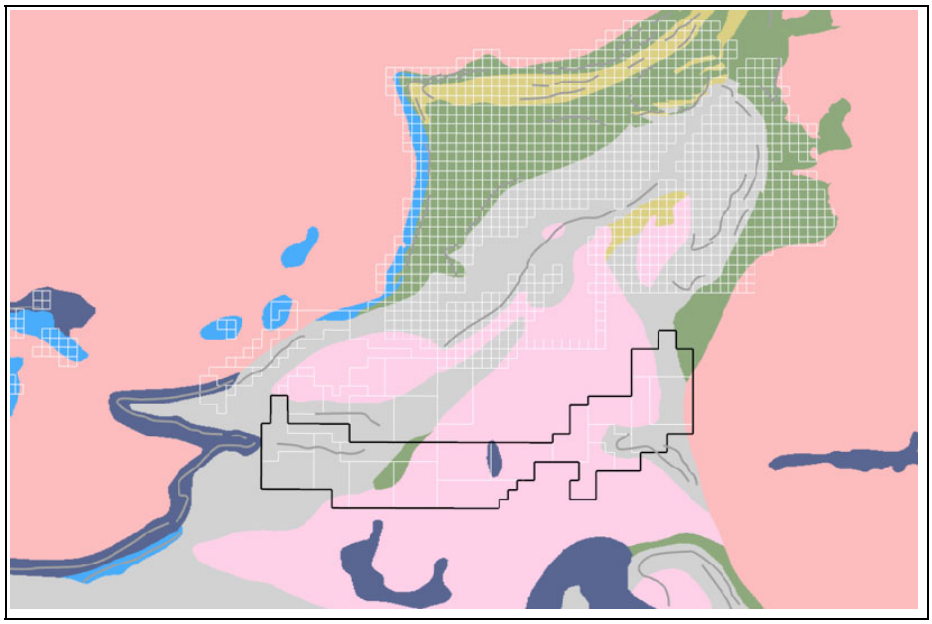

Figure 9: *The Attwood Lake Lithium Project Tenure in Nakina, Ontario in Canada.*

Shortly after securing the Attwood Lake Project Redstone undertook a Phase 1 reconnaissance exploration program (**Phase 1 Program**), which comprised a helicopter-supported geological mapping and sampling program for Li and REE bearing pegmatites.

Samples were collected from outcrops that varied in size from a few meters up to 10s of meters wide by 50 m long. Sampling concentrated on the largest accessible pegmatite bodies observed from the air with a total of 209 rock samples collected from various pegmatitic bodies on the Project (**Figures 10 and 11**). At least a further 10 pegmatite bodies were identified from the air but are yet to be sampled.

The Phase 1 Program and results obtained during the Quarter indicate that elevated lithium is present across the Attwood Lake Project. The western half of the project is considered the most prospective due to the abundant pegmatite exposures in the area which returned the highest lithium concentrations (**Figure 12**). These pegmatites are hosted within metasediments and comprise the largest pegmatites found on the project to date.

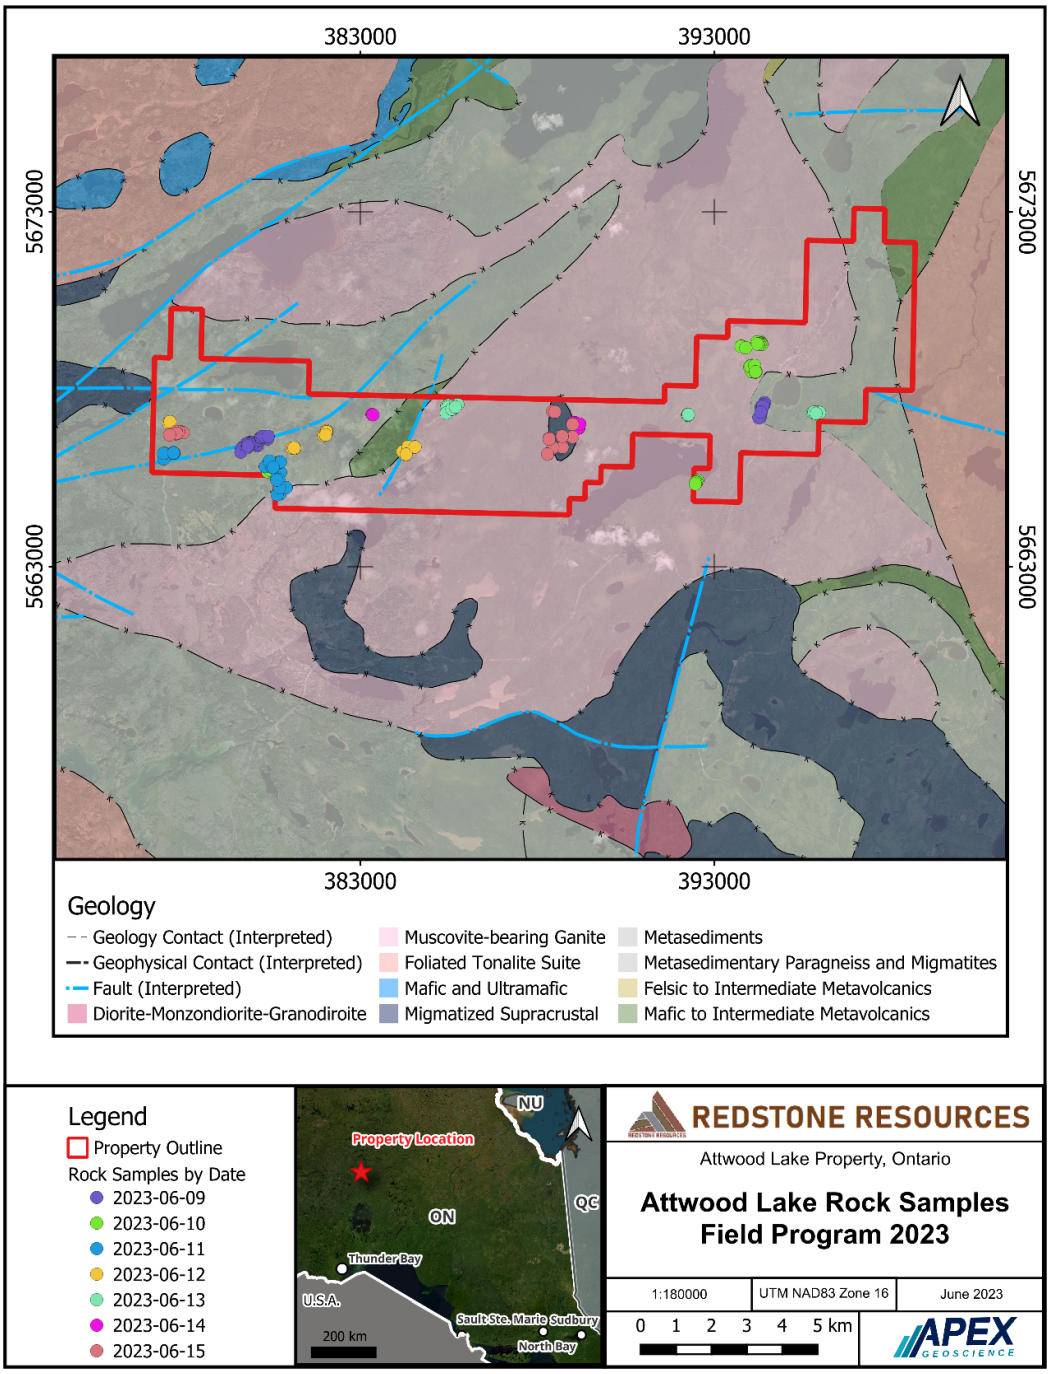

***Figure 10**: Location and geology of Attwood Lake Phase 1 Program rock samples.*

***Figure 11**: Geologist exposes pegmatite outcrop beneath lichen.*

The samples returned lithium concentrations up to 78.9ppm. Seven grab samples comprising pegmatitic-grained granites to pegmatites, medium- to coarse-grained granites and other lithologies (**Figure 12**) from across the Project yielded Li assay values greater than 60 ppm (three-times background levels; **Figure 13**).

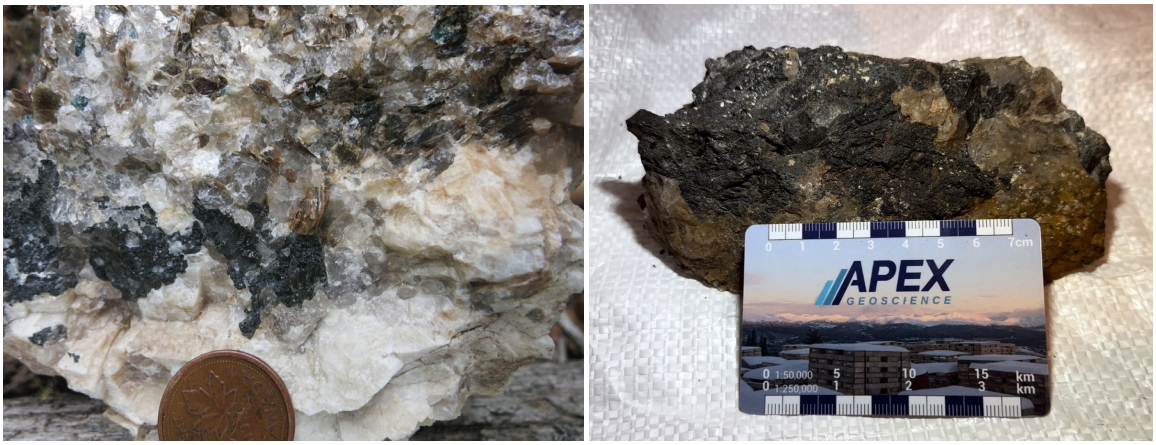

***Figure 12:** Left: Pegmatite with minerals of feldspar (white/cream), quartz (clear), tourmaline (black), muscovite (bronze), and apatite (blue). Right: Black tourmaline crystals in pegmatite.*

The highest assay sample F0031340 (78.9 ppm Li) was collected from a large pegmatite body that extends over 200 m in length and trends east-west. Sample F0031006 (72.5 ppm Li) was collected along a trend of pegmatite bodies that extend over 800 m in length, with individual pegmatites reaching approximately 50 m in length. Follow up sampling in these areas is proposed to test the entire extent of the pegmatites.

Planning has commenced to undertake a focussed reconnaissance program to follow up on these initial results and to target the higher-grade Li pegmatites. A ground-based programme is also being planned to assess the presence and composition of potential pegmatite outcrop that is obscured from aerial reconnaissance by the extensive tree cover.

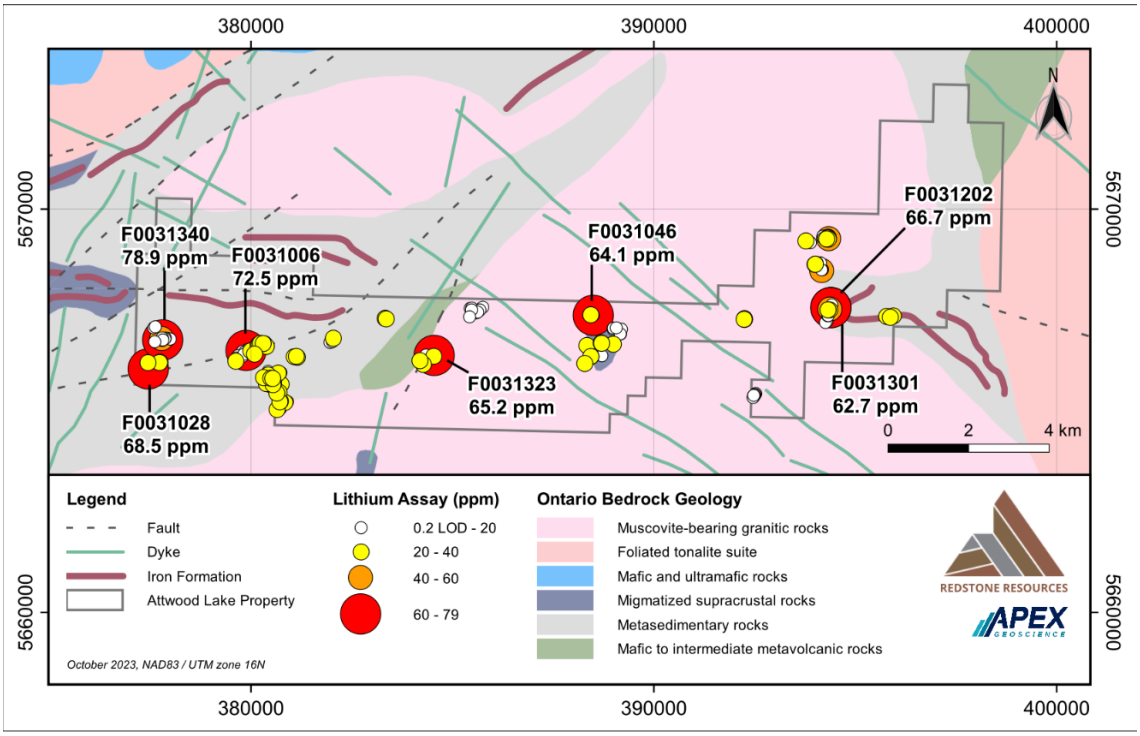

Figure 13: *Assay results for Li from Attwood Lake 2023 rock grab samples.*

WEST MUSGRAVE PROJECT (RDS: 100%)

Redstone's 100% owned West Musgrave Project (the **West Musgrave Project**) which includes the Tollu Copper Vein deposit (**Tollu**), is located in the southeast portion of the West Musgrave region of Western Australia.

The West Musgrave Project has the right geological and structural setting for large magmatic Ni-Cu sulphide deposits just 40km east of BHP's world-class Nebo-Babel Ni-Cu-Co-PGE deposit, which is estimated to have a resource of 390 million tonnes grading 0.33% copper and 0.30% nickel, for 1.2 million tonnes of contained nickel metal and 1.3 million tonnes of contained copper metal (Mea + Ind + Inf – 2012 JORC) (see **Figure 14**).

Tollu hosts a giant swarm of hydrothermal copper rich veins in a ineralizat system covering an area at least 5km^2. Copper ineralization is exposed at the surface and forms part of a dilation system within and between two major shears.

Redstone expects the initial JORC 2012 resource at Tollu of **3.8 million tonnes at 1% Cu, containing 38,000 tonnes of copper, and 0.01% cobalt, which equates to 535 tonnes of contained cobalt** (ASX release 15 June 2016 and 1 May 2017), the ineralizat area, and the volume of hydrothermal ineralization, to increase with further drilling.

Geological interpretation suggests that the West Musgrave Project may also be prospective for Volcanic Hosted Massive Sulphide (VHMS) deposits, large continental type Molybdenum (Mo)-porphyry deposits, strata-bound Gold (Au)- Silver (Ag) deposits, Tin (Sn) – Tungsten (W) ineralization related to granites, granite stockworks or greissens, intrusion related polymetallic veining and Intrusion Related Gold deposits (IRG).

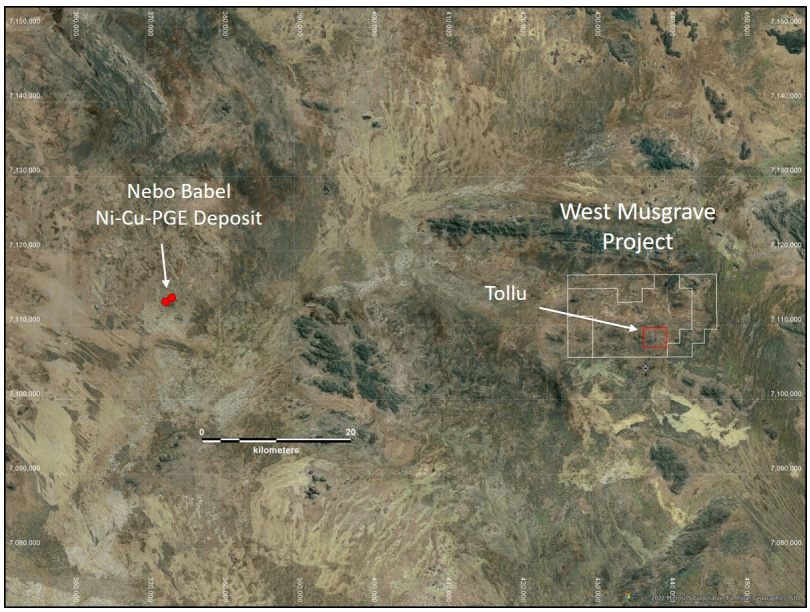

Figure 14 – *Location of the West Musgrave Project in relation to the Nebo-Babel Ni-Cu-PGE deposit.*

Assay results from the 2022 RC drilling campaign released in early 2023 have for the first time confirmed the presence of a potential Ni-Cu-Co-PGE host or source rocks on the West Musgrave Project. This significantly upgrades the West Musgrave Project for Ni-Cu-Co-PGE prospectivity, especially considering the western boundary of the project area is only 40km east of the now BHP owned world class Nebo Babel Ni-Cu-Co-PGE deposit (see **Figure 14**).

No further exploration work was completed at the West Musgrave Project during the Quarter. Further updates on strategy and exploration plans will be provided in due course.

HANTAILS GOLD PROJECT – FARM-IN AND JOINT VENTURE AGREEMENT (RDS: 80%)

The Company's HanTails Gold Project (**HanTails**) is a historic large scale gold mine Tailings Storage Facility (**TSF**) located on the historic Hannans South Gold Mill site, just 15kms south of Kalgoorlie-Boulder, Western Australia. Last year, the Company completed Stage 2 of the HanTails Farmin and Joint Venture to acquire an 80% interest in HanTails (P26/4308 and P26/4465).

No further exploration work was completed at the HanTails Project during the Quarter.

CORPORATE

2022 R&D Tax Incentive

During the Quarter the Company received a Research and Development (R&D) Tax Incentive claim rebate totalling $228,239 (before fees) in relation to FY2022.

Cash

At the end of the Quarter the Company had available cash of $614,000. Cash requirements are considered sufficient for the short to medium term.

During the Quarter the Company incurred exploration spend of $71,000, primarily on the prospectivity and hyperspectral analyses on the Radisson East and Sakami Projects.

Payments to related parties of $17,000 is for remuneration of directors (refer section 6 of Appendix 5B).

TENEMENT INFORMATION AS REQUIRED BY LISTING RULE 5.3.3

The Company holds the following tenements at the end of the Quarter.

TENEMENT SUMMARY AS AT 31 DECEMBER 2023

West Musgrave, Western Australia

Project	Tenement	Registered Holder Applicant	Holder Interest	Consolidated Entity Interest	Grant Date (Application Date)	Expiry	Blocks	Area km^2

REDSTONE RESOURCES

Redstone Resources Limited (ASX: RDS) is a base, precious metals and emerging lithium company. The Company is exploring its 100% owned prospective West Musgrave Project, which includes the Tollu Copper deposit, in Western Australia located between BHP's Nebo Babel Deposit and Nico Resources' Wingellina Ni-Co project. Redstone continues to evaluate the HanTails Gold Project at Kalgoorlie, Western Australia for potential development in the future.

Redstone has recently entered into an option agreement to acquire the Attwood Lake Lithium Project located in northwestern Ontario, Canada over which it is has completed a Phase 1 exploration programme. Redstone has further strengthened its battery metals exposure, having also entered into an option agreement to acquire 100% of the Radisson East and Sakami Lithium Projects located in the prolific James Bay Lithium District, Québec and has also recently entered into a 50/50 JV with Galan Lithium for the Taiga, Camaro, and Hellcat, located in James Bay, Canada (the James Bay Lithium Projects) and an option for the PAK Lithium Projects located in Ontario, Canada.

ASX Listing Rule Information

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements, and in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the original market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the competent persons findings have not been materially modified from the original announcement referred to in the release.

Cautionary Note

The Company cautions that as per ASX Listing Rule 3.1 and the Compliance Update 04/23, the presence of pegmatite rock does not necessarily indicate the presence of lithium mineralisation. Laboratory chemical assays are required to determine the presence and grade of mineralisation.

Forward-Looking Statements

This document may include forward-looking statements. Forward-looking statements include, but are not limited to statements concerning Redstone Resources Limited's (Redstone) planned exploration program and other statements that are not historical facts. When used in this document, the words such as "could", "plan", "estimate", "expect", "intend", "may", "potential", "should", and similar expressions are forward-looking statements. Although Redstone believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.

Competent Persons Statements

Attwood Lake Project, Ontario, Canada and Radisson East and Sakami Projects, Québec, Canada

The information in this document that relates to exploration results and multispectral analysis for the Attwood Lake Lithium Project and the Radisson East and Sakami Projects was authorised by Michael Dufresne, M.Sc., P.Geol, P.Geo., who is employed as a Consultant to the Company through APEX Geoscience. Mr. Dufresne is a Member of the Alberta, British Columbia, Northwest Territories – Nunavut and New Brunswick Engineering and Geoscientist Professional Associations and has sufficient experience of relevance to the style of mineralisation and type of deposit under consideration and to the tasks with which he was employed to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral

Resources and Ore Reserves. Mr. Dufresne consents to the inclusion in the report of matters based on information in the form and context in which it appears.

Radisson East and Sakami Projects, Québec, Canada - Prospectivity Analysis, Mercator Geological Services
The information in this document that relates to Prospectivity Results for the Sakami and Raddison East Lithium Projects was compiled and authored by Mr. Ryan Kressall M.Sc., P.Geo., who is employed as a Consultant to the Company through Mercator Geological Services Limited. Mr. Kressall P.Geo. is a Member of the Professional Geoscientist of Nova Scotia and Professional Engineers and Geoscientists of Newfoundland and Labrador, and has sufficient experience which is relevance to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Kressall P.Geo. consents to the inclusion in the report of matters based on information in the form and context in which it appears.

James Bay and Ontario Joint Venture Projects (50/50 RDS and GLN)
The information contained herein that relates to exploration results and geology for the James Bay and Ontario Joint Venture Projects between Redstone and Galan Lithium Ltd (ASX: GLN) is based on information compiled or reviewed by Dr Luke Milan, who has consulted to the Company. Dr Milan is a Member of the Australasian Institute of Mining and Metallurgy and has sufficient experience which is relevant to the style of mineralisation and types of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Persons as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Milan consents to the inclusion of his name in the matters based on the information in the form and context in which it appears.

West Musgrave Project, West Musgrave Western Australia
The information in this document that relates to exploration results for the West Musgrave Project from 2017 to date was authorised by Dr Greg Shirtliff, who is employed as a consultant to the company through Zephyr Professional Pty Ltd. Dr Shirtliff is a Member of the Australian Institute of Mining and Metallurgy and has sufficient experience of relevance to the tasks with which he is employed to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Shirtliff consents to the inclusion in the report of matters based on information in the form and context in which it appears.

The information in this report that relates to Mineral Resource for the West Musgrave Project was authorised by Mr Darryl Mapleson, a Principal Geologist and full time employee of BM Geological Services, who were engaged as consultant geologists to Redstone Resources Limited. Mr Mapleson is a Fellow of the Australian Institute of Mining and Metallurgy. Mr Mapleson has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to act as a competent person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Mapleson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Appendix 5B

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

Name of entity	
Redstone Resources Limited	
ABN	**Quarter ended ("current quarter")**
42 090 169 154	31 December 2023

	Consolidated statement of cash flows	Current quarter $A'000	Year to date (6 months) $A'000
1.	**Cash flows from operating activities**		
1.1	Receipts from customers	-	-
1.2	Payments for		
	(a) exploration & evaluation	-	-
	(b) development	-	-
	(c) production	-	-
	(d) staff costs	(44)	(91)
	(e) administration and corporate costs	(37)	(73)
1.3	Dividends received (see note 3)	-	-
1.4	Interest received	5	5
1.5	Interest and other costs of finance paid	-	-
1.6	Income taxes paid	-	-
1.7	Government grants and tax incentives	-	-
1.8	Other – R&D Rebate (net of fees))	206	206
1.9	**Net cash from / (used in) operating activities**	**130**	**47**

2.	**Cash flows from investing activities**		
2.1	Payments to acquire or for:		
	(a) entities	-	-
	(b) tenements	(17)	(93)
	(c) property, plant and equipment	-	-
	(d) exploration & evaluation	(71)	(354)
	(e) investments	-	-
	(f) other non-current assets	-	-

Consolidated statement of cash flows		Current quarter $A'000	Year to date (6 months) $A'000
2.2	Proceeds from the disposal of:		
	(a) entities	-	-
	(b) tenements	-	-
	(c) property, plant and equipment	-	-
	(d) investments	-	-
	(e) other non-current assets	-	-
2.3	Cash flows from loans to other entities	-	-
2.4	Dividends received (see note 3)	-	-
2.5	Other (provide details if material)	-	-
2.6	**Net cash from / (used in) investing activities**	**(88)**	**(447)**

3.	**Cash flows from financing activities**		
3.1	Proceeds from issues of equity securities (excluding convertible debt securities)	-	-
3.2	Proceeds from issue of convertible debt securities	-	-
3.3	Proceeds from exercise of options	-	-

3.5	Proceeds from borrowings	-	-
3.6	Repayment of borrowings	-	-
3.7	Transaction costs related to loans and borrowings	-	-
3.8	Dividends paid	-	-
3.9	Other (provide details if material)	-	-
3.10	**Net cash from / (used in) financing activities**	**-**	**(7)**

4.	**Net increase / (decrease) in cash and cash equivalents for the period**		
4.1	Cash and cash equivalents at beginning of period	572	1,021
4.2	Net cash from / (used in) operating activities (item 1.9 above)	130	47
4.3	Net cash from / (used in) investing activities (item 2.6 above)	(88)	(447)
4.4	Net cash from / (used in) financing activities (item 3.10 above)	-	(7)

Consolidated statement of cash flows		Current quarter $A'000	Year to date (6 months) $A'000
4.5	Effect of movement in exchange rates on cash held	-	-
4.6	**Cash and cash equivalents at end of period**	**614**	**614**

5.	Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter $A'000	Previous quarter $A'000
5.1	Bank balances	554	562
5.2	Call deposits	60	10
5.3	Bank overdrafts	-	-
5.4	Other (provide details)	-	-
5.5	**Cash and cash equivalents at end of quarter (should equal item 4.6 above)**	**614**	**572**

6.	Payments to related parties of the entity and their associates	Current quarter $A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	17
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

7.	Financing facilities *Note: the term "facility' includes all forms of financing arrangements available to the entity.* *Add notes as necessary for an understanding of the sources of finance available to the entity.*	Total facility amount at quarter end $A'000	Amount drawn at quarter end $A'000
7.1	Loan facilities	-	-
7.2	Credit standby arrangements	-	-
7.3	Other (please specify)	-	-
7.4	**Total financing facilities**	-	-
7.5	**Unused financing facilities available at quarter end**		-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

N/A

8.	Estimated cash available for future operating activities	$A'000
8.1	Net cash from / (used in) operating activities (item 1.9)	130
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(71)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	59
8.4	Cash and cash equivalents at quarter end (item 4.6)	614
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	614
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	N/A

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer:

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer:

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer:

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 31/01/2024.....

Authorised by: By the board.....
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash*

Flows apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
