Commenting on the results, Vulcan's Managing Director and CEO, Rhys Jones, said:

"Following a difficult FY23, business conditions remained challenging in 1H FY24, especially in the New Zealand market and the Steel segment in Australia, as previously flagged.

"Higher interest rates continued to impact on business activity and investment appetite. High inflation added to the pressure on business costs.

"Despite these conditions, we delivered a strong operating cashflow performance of NZ\$105m in 1H FY24 by being disciplined on working capital and costs, and with net debt further reduced by \$42m since FY23 to NZ\$298m at the end of December 2023.

"The underlying 4% growth in our customer base in 1H FY24 and progress we have made in our growth programme have been encouraging. We are well-positioned to capitalise on a recovery in the cycle and will continue to invest in the business appropriately for growth."

Outlook

Trading was variable in the first six months of the current financial year, with some weakness observed in the October to December 2023 quarter. However, sales activity is showing early signs of stabilising at current levels. Customer inquiry levels have been increasing in certain segments.

Lead business activity indicators for New Zealand point to an improving outlook for 2024, although the timing and magnitude of a recovery remains uncertain. Our expectation is for New Zealand trading volume to begin to recover from the second or third quarter of the 2024 calendar year.

In Australia, expectations are for Vulcan's Metals segment to remain steady and improve during the 2024 calendar year. Vulcan's Australian Steel segment volume will likely continue to be challenging, especially in Victoria in the near term.

Notwithstanding the economic environment, Vulcan remains focused on growing the company's customer base, maintaining our high service level and improving earnings and returns for shareholders over time.

The company will host a conference call to discuss the 1H FY24 results.
