

CULPEO COMMENCES DRILLING AT LANA CORINA WHERE INTERSECTIONS INCLUDED 257m @ 1.10% CuEq

Culpeo Minerals Limited (**Culpeo** or the **Company**) (ASX:CPO, OTCQB:CPORF) is pleased to advise extensional drilling has commenced at the Lana Corina Project (the **Project**), Chile, building on the achievements of the 2023 program.

HIGHLIGHTS

- **Diamond drilling program underway at the Lana Corina Prospect.**
- **The program is scheduled for 2,000m of drilling which aims to extend broad zones of high-grade copper and molybdenum mineralisationⁱ along a >3km prospective corridor, including:**
 - **257m @ 1.10% CuEq** in CMLCD002 from 170mⁱⁱ;
 - **173m @ 1.09% CuEq** in CMLCD003 from 313mⁱⁱⁱ; and
 - **169m @ 1.21% CuEq** in CMLCD010 from 239m^{iv}.
- High-grade copper and molybdenum **mineralisation has been defined at Lana Corina over a surface area of 500m x 400m, to over 700m deep** and is open in all directions.

Figure 1: Drill rig operational at the Lana Corina Project April 2024.

Culpeo Minerals' Managing Director, Max Tuesley, commented:

"Following the success of the 2023 program and the exceptional results we have delivered from Lana Corina, it is exciting to have commenced another significant drilling campaign at the Project in 2024.

The commencement of this extensional exploration program is an important step in realising the Company's growth strategy, and we look forward to sharing progress updates with our shareholders over the coming months as we continue to drill our Lana Corina and Fortuna Projects."

PROGRAM OBJECTIVES

The 2024 drill program is focused on expanding the western and down-dip extension of the high-grade copper and molybdenum previously reported at Lana Corina (Figure 2). Additionally, initial testing of the Vista Montana Prospect aims to extend the potential mineralised corridor to over 3km in strike length.

Figure 2: Plan view of drilling results at Lana Corina¹.

For personal use only

Culpeo's exploration team has developed a greater understanding of the geological setting and the timing of both the breccia and porphyry hosted mineralisation in recent months. This new understanding provides a strong backdrop to targeting mineralisation extensions.

LANA CORINA PROJECT

The Lana Corina Project is located in the coastal belt of Chile, approximately 350km north of Santiago. The project benefits from substantial existing local infrastructure including sealed road access and a 75MW power station approximately 3km to the east.

The Project is associated within a structural zone oriented in a northeast-southwest direction with >3km of strike and up to 400m wide. High-grade copper mineralisation is associated with four known breccia pipes occurring in the upper levels of a large copper bearing porphyry hosted mineralised system. The high-grade mineralisation identified to date outcrops at surface and extends to a vertical depth of 700m and remains open.

Figure 3: Prospectivity over >3km of strike (background image is the VOXI 3D magnetic inversion model)^{vi}

Prospectivity modelling (see Figure 3) has identified multiple target areas at the Vista Montana Prospect area extending the potential mineralised corridor to >3km strike length. This work indicates significant regional potential for further copper and molybdenum discoveries and provides a pipeline of high priority drill targets.

Mapping at Vista Montana has identified significant surface mineralisation, historic small scale mine workings and geochemical sampling has defined several key target areas^{vii}.

The excellent results of Culpeo's drilling programs and prospectivity modelling continues to strongly support the potential for Lana Corina to host a substantial high-grade copper and molybdenum system, which is the focus of the extensional diamond drilling program.

This announcement has been authorised by the Board of Directors of Culpeo Minerals Limited.

ABOUT CULPEO MINERALS LIMITED

Culpeo Minerals is a copper exploration and development company with assets in Chile, the world’s number one copper producer. The Company is exploring and developing high-grade copper systems in the coastal Cordillera region of Chile.

The Company has made a new discovery at Lana Corina and has recently acquired the Fortuna Project, which hosts a suite of promising exploration targets. Both projects are situated in the Coquimbo region of Chile and contain significant outcropping high-grade copper mineralisation which offers multiple walk-up drill targets.

Culpeo Minerals has a strong board and management team with significant Chilean country expertise and has an excellent in-country network. All of these elements enable the Company to gain access to quality assets in a non-competitive environment. We leverage the experience and relationships developed over 10 years in-country to deliver low cost and effective discovery and resource growth. We aim to create value for our shareholders through exposure to the acquisition, discovery and development of mineral properties which feature high-grade, near surface copper mineralisation.

COMPETENT PERSONS' STATEMENTS

The information in this announcement that relates to Exploration Results is based on information compiled by Mr Maxwell Donald Tuesley, BSc (Hons) Economic Geology, MAusIMM (No 111470). Mr Tuesley is a member of the Australian Institute of Mining and Metallurgy and is a shareholder and Director of the Company. Mr Tuesley has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Tuesley consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

Appendix D: Technical Details

Copper Equivalent (Cu Eq) values: Assumed commodity prices for the calculation of Copper Equivalent (Cu Eq) is Cu US\$3.00/lb, Au US\$1,700/oz, Mo US\$14/lb and Ag US\$20/oz. Recoveries are assumed from similar deposits: Cu = 85%, Au = 65%, Ag = 65%, Mo = 80%, Cu Eq (%) was calculated using the following formula: $((Cu\% \times Cu \text{ price } 1\% \text{ per tonne} \times Cu \text{ recovery}) + (Au(g/t) \times Au \text{ price per g/t} \times Au \text{ recovery}) + (Mo \text{ ppm} \times Mo \text{ price per g/t} \times Mo \text{ recovery}) + Ag \text{ ppm} \times Ag \text{ price per g/t} \times Ag \text{ recovery}) / (Cu \text{ price } 1\% \text{ per tonne} \times Cu \text{ recovery})$. $Cu \text{ Eq } (\%) = Cu (\%) + (0.54 \times Au (g/t)) + (0.00037 \times Mo (ppm)) + (0.0063 \times Ag (ppm))$. It is the Company's opinion that all elements included in the metal equivalents have a reasonable potential to be recovered and sold.
