Highlights

> Gidji JV

- IP Survey highlights potential extension(s) to 8 Mile Dam gold deposit

> Randalls

- New tenement applications along Randall Fault

> Bangemall Ni-Cu-Co-PGE Projects

- Exploration Incentive Scheme (EIS) funding approval and preparations for maiden drilling campaign at Mt Vernon and Trouble Bore

> Whaleshark

- Passive seismic survey maps basement depth across Project
- Large magnetite Exploration Target outlined

> Corporate/Financial

- Placement raises \$446,000 and Entitlement Offer Announced
- 2023 EIS funding and Research and Development tax refund received

Miramar Resources Limited (ASX:M2R, Miramar or “the Company”) is pleased to provide a summary of activities completed during the Quarter ending 30 June 2024.

During the Quarter, the Company completed exploration activities across various projects in the Eastern Goldfields and Gascoyne regions of Western Australia and continued preparing for the maiden drill campaign within its Bangemall Projects.

An IP Survey within the Gidji JV Project increased the likelihood of a northern extension to the 313koz 8 Mile Dam gold deposit, offset by faulting.

The Company completed a passive seismic survey to map basement depth and outlined a very large magnetite Exploration Target at Whaleshark.

Miramar’s Executive Chairman, Mr Allan Kelly, said the Company was looking forward to completing the first drill campaign at Mount Vernon and Trouble Bore, targeting Norilsk-style Ni-Cu-Co-PGE mineralisation.

“We are exploring for mineralisation similar to the giant Norilsk-Talnakh deposits in Siberia, the largest and most valuable nickel deposits in the world,” he said.

“In addition, we have a number of highly prospective but underexplored gold projects in the world-class Eastern Goldfields Province, any of which could host a significant gold deposit,” he added.

EASTERN GOLDFIELDS PROJECTS

Miramar has three highly prospective projects in the Eastern Goldfields of Western Australia with the potential for new gold discoveries within proximity to existing mining and/or processing operations.

Gidji JV (80%)

Miramar holds an 80% interest in a strategic land package within the Boorara Shear zone, between the Kalgoorlie Super Pit and the Paddington gold deposit (Figure 1).

During the Quarter, the Company attempted a single RC drill hole at the Blackfriars prospect.

Blackfriars is located at the contact between the Black Flag Group and mafic and ultramafic rocks within the Boorara Shear Zone and shares the same geological setting as the >2 million ounce Paddington gold deposit along strike to the north. Given the apparent similarities to Paddington, Blackfriars is a high priority target within the Gidji JV Project.

The Blackfriars aircore gold footprint stretches for at least 1 kilometre at greater than 1g/t Au and remains open along strike to the northwest on the other side of the Goldfields Highway.

GJRC028 tested beneath aircore hole GJAC627, which ended in black shale with quartz-carbonate veining and sulphides and returned a result of **1m @ 11.8g/t Au and 6g/t Ag** (46-47m EOH) (see ASX Release dated 8 April 2022).

GJRC028 intersected black shale and silicified quartz dolerite with sulphide mineralisation and quartz stringers but was terminated at 130m due to difficult drilling conditions associated with running sands in the overlying Gidji Paleochannel.

Samples of the last three metres before the hole was abandoned contain anomalous gold, silver and antimony along with the increase in sulphide mineralisation (Figure 2) but the Blackfriars target remains untested at this stage.

Miramar will review options for further work at Blackfriars, including adding a diamond tail to GJRC028 to properly test the dolerite unit, and testing along strike to the northwest with further aircore drilling.

The Company also completed an Induced Polarisation (IP) survey over the 8 Mile target which outlined a relatively shallow chargeability anomaly beneath significant aircore end of hole results and offset from the "8 Mile Dam" gold deposit immediately south of the tenement boundary (Figure 3).

Glandore

No fieldwork was completed during the Quarter.

Randalls

During the Quarter, the Company submitted several new applications for Exploration Licences along the Randall Fault, including over Lake Yindarlgooda where previous wide-spaced aircore drilling outlined supergene gold mineralisation over at least 11 kilometres of strike under the salt lake (Figure 4).

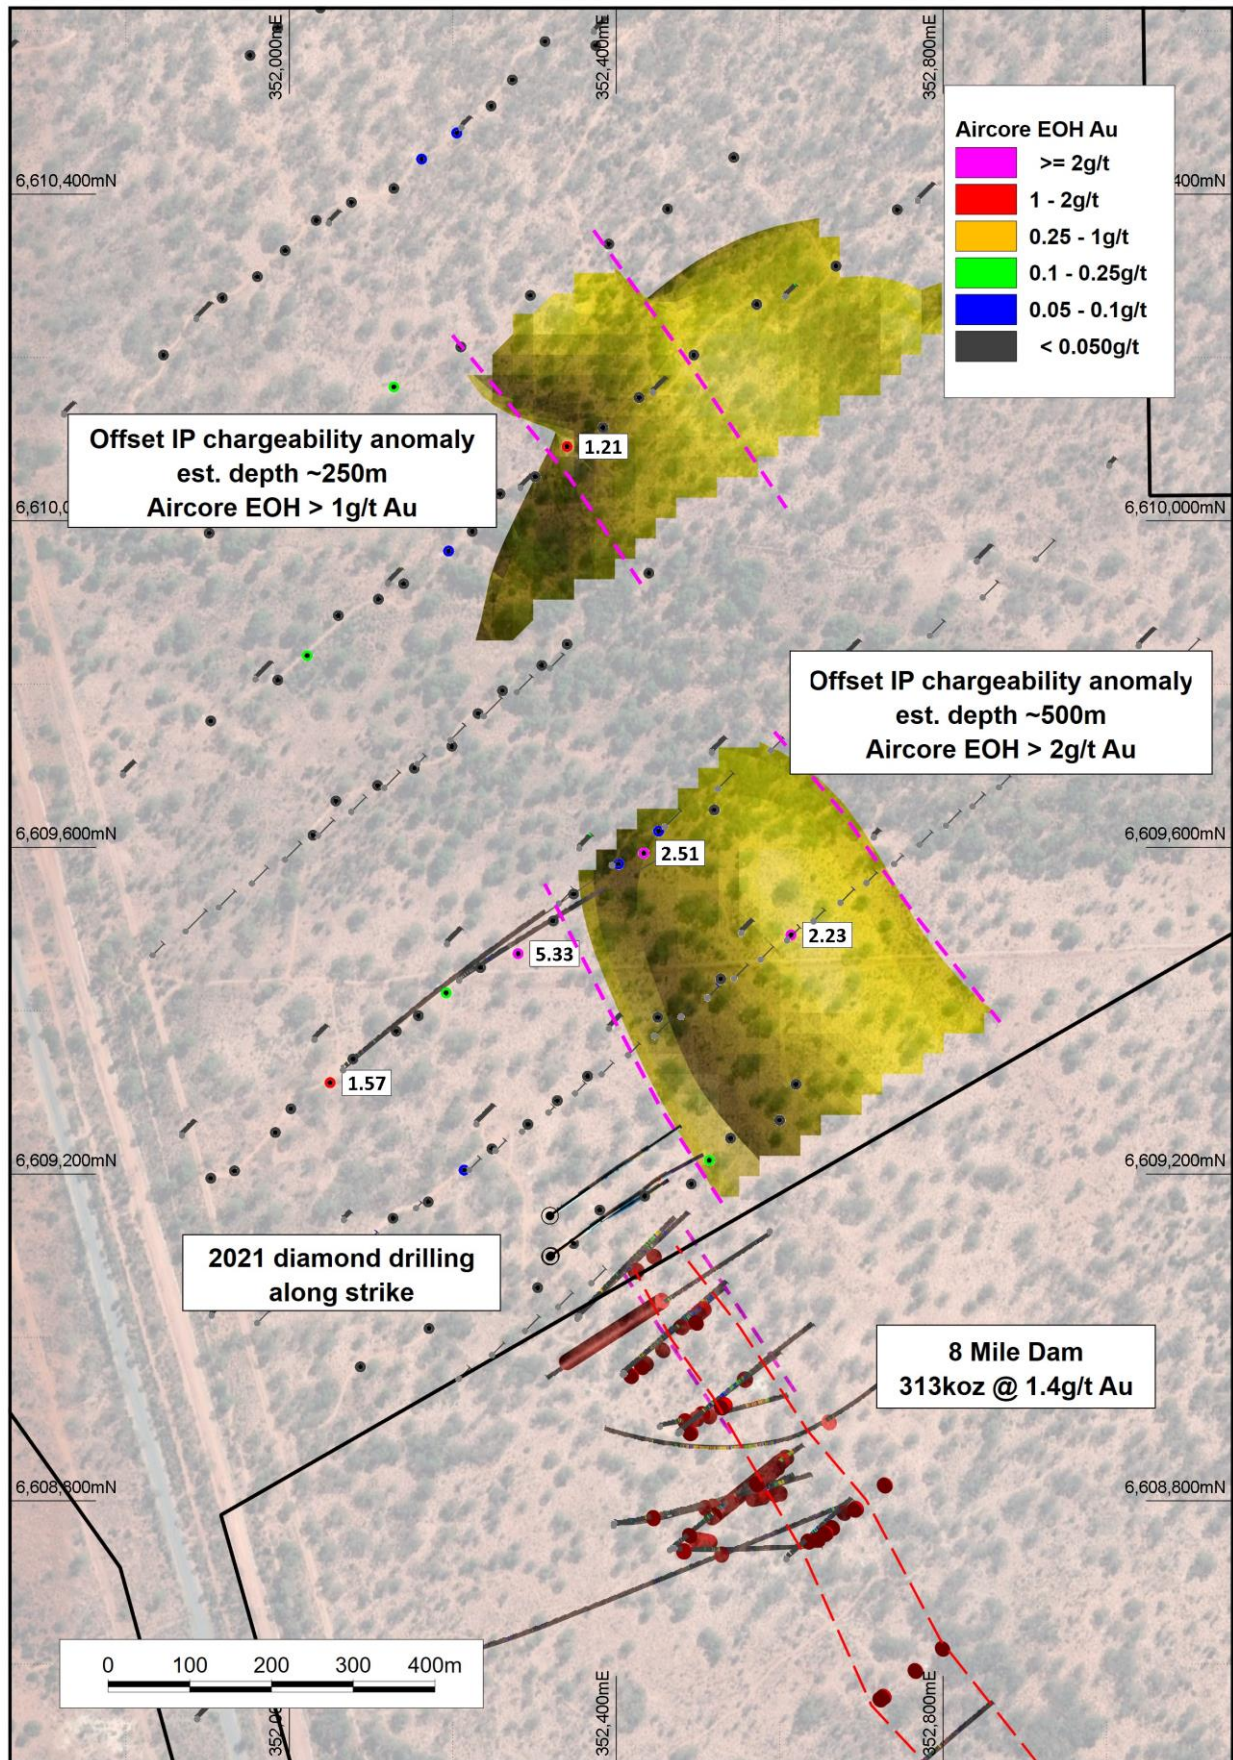

Figure 3. 8 Mile Target showing IP anomalies and aircore EOH results in relation to 8 Mile Dam Deposit.

For personal use only

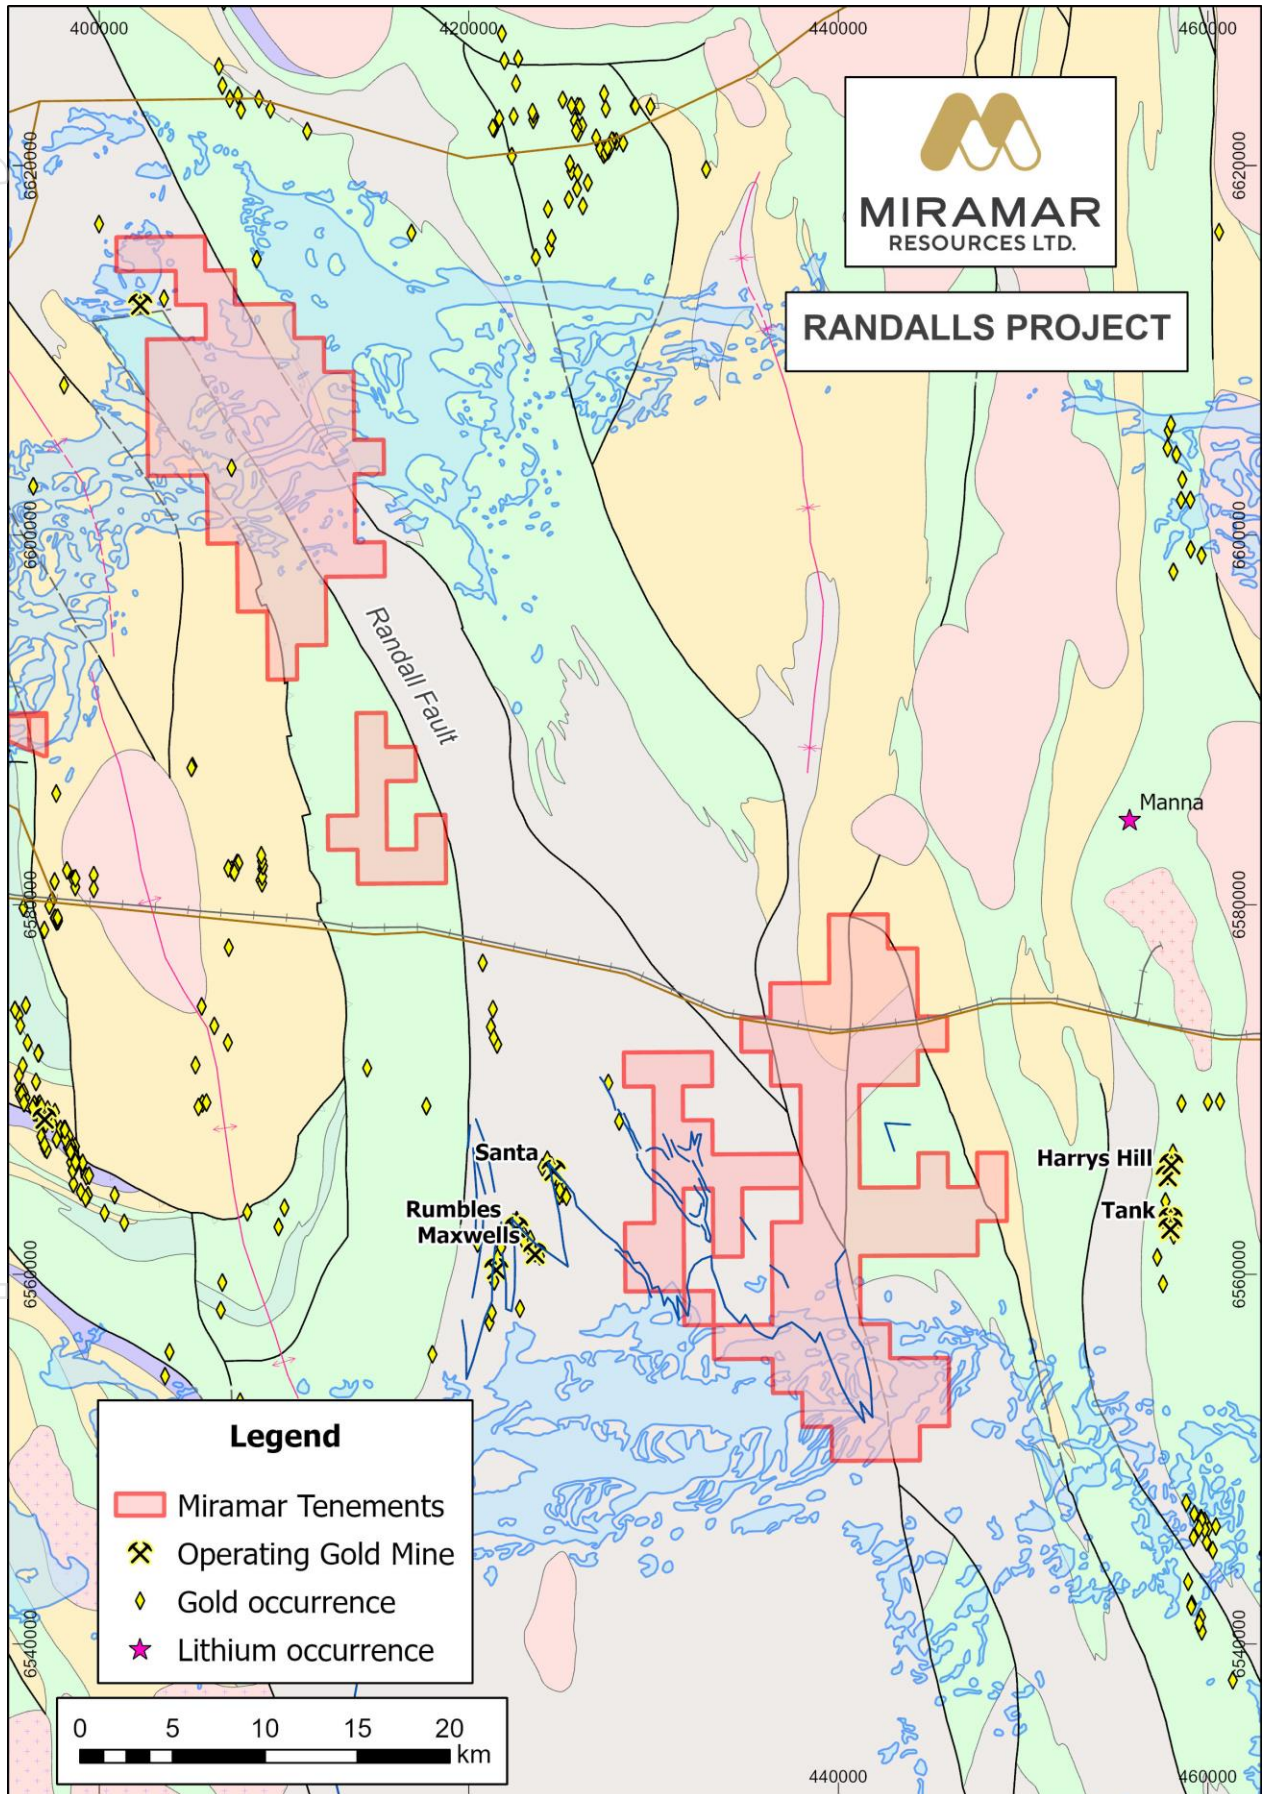

Figure 4. Randalls Project showing tenement applications in relation to regional geology and deposits.

GASCOYNE REGION PROJECTS

Bangemall Projects

Miramar has several granted and pending Exploration Licences in the Bangemall region which are prospective for Proterozoic magmatic Ni-Cu-Co-PGE mineralisation associated with 1070Ma Kulkatharra Dolerite sills which are the same age as the Giles Complex, host to the large Nebo and Babel Ni-Cu deposits in the West Musgraves of WA (Figure 5).

Since 2020, Miramar has built a strategic land position in the Bangemall region, focussing on areas containing key ingredients and/or regional-scale indicators for Norilsk-style Ni-Cu-Co-PGE mineralisation:

- Kulkatharra Dolerite sills – source of Ni, Cu +/- PGE's and same age as Nebo-Babel deposits
- Proximity to major crustal-scale faults - potential plumbing systems
- Sulphidic and/or evaporitic sediments - potential sulphur source
- Regional-scale geochemical anomalism (GSWA regional geochemistry)
- Regional-scale EM anomalism (2013 Capricorn AEM Survey)

Figure 5. Regional geology of Gascoyne region showing Miramar tenements.

Mount Vernon

The Mount Vernon Project covers a series of Kulkatharra Dolerite sills where regional data highlighted a number of large geophysical and geochemical anomalies, and where limited historical exploration work identified anomalous Ni, Cu and PGE's in soil and rock chip sampling.

Miramar flew a detailed magnetic and electromagnetic (EM) survey over the target in early 2022 which highlighted several late-time EM anomalies associated with a dolerite sill towards the northern edge of the project area.

A number of these EM anomalies were followed up with Fixed Loop ground EM surveys in early 2024 which confirmed the airborne EM data (Figure 6).

Trouble Bore

The local geology of the Trouble Bore Project is dominated by Kulkatharra Dolerite sills intruding into sulphidic or evaporite-rich sediments of the Edmund and Collier Basin.

Previous exploration focussed mainly on exploration for sediment-hosted copper, lead and zinc during the 1990's and early 2000's with more recent exploration since 2009 focussed on the search for channel iron deposits (CID) by Rio Tinto Exploration in the period 2012-2014.

Rio Tinto flew a SkyTEM electromagnetic survey in 2013, with N-S survey lines and a relatively broad line spacing of 1000m, and subsequently drilled three RC holes within the area now covered by E52/4301. The RC drilling failed to intersect CID mineralisation and Rio Tinto subsequently surrendered the tenements (WAMEX reports a100526, a104395 and a106023).

The SkyTEM data highlights EM anomalies coincident with the EW-trending sub-horizontal dolerite sills as well as two N-S trending anomalies which may represent sub-vertical feeder dykes linking the sills. Feeder dykes are an important component of the "plumbing systems" associated with Ni-Cu-Co-PGE deposits.

There is minimal reported surface geochemical data across the Project.

In early 2024, a Moving Loop EM Survey was completed across the SkyTEM anomaly.

EIS Funding

During the Quarter, Miramar was advised by the Department of Energy, Mines, Industry Regulation and Safety (DEMIRS) that it has been awarded up to \$180,000 towards the maiden drilling campaign targeting Norilsk-style Ni-Cu-Co-PGE mineralisation at the Mount Vernon and Trouble Bore Projects.

Subsequent to the end of the Quarter, Miramar field staff visited the Mt Vernon and Trouble Bore Projects to make preparations for the upcoming drilling programme (Figure 7), scheduled for the September Quarter.

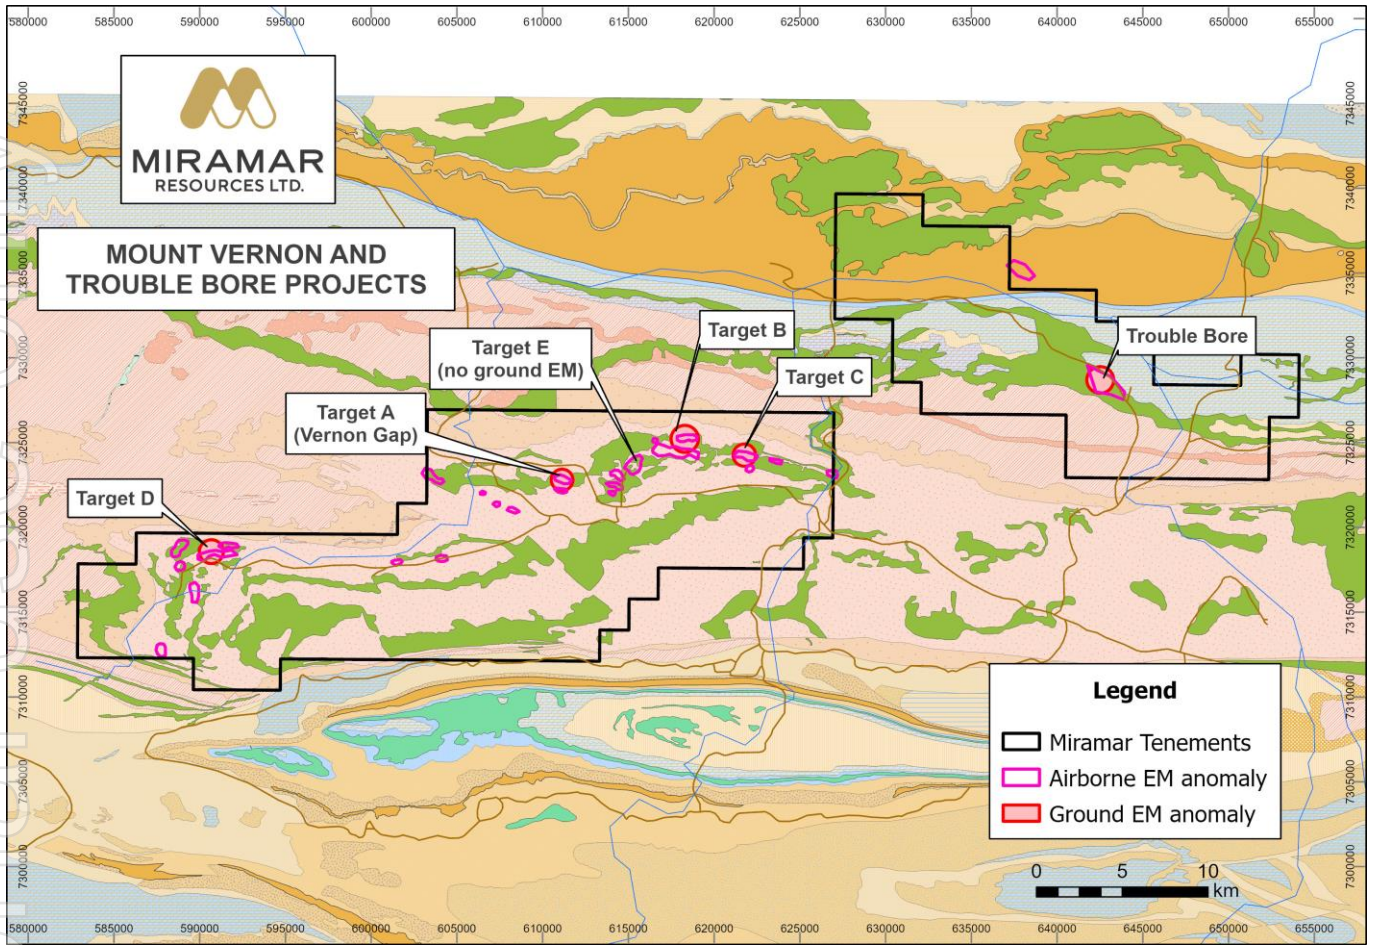

Figure 6. Mount Vernon and Trouble Bore Projects showing airborne and ground EM anomalies.

Figure 7. Preparing drill sites at the Mount Vernon Project

Whaleshark

The Whaleshark Project is located approximately 40km east of Onslow, in the Ashburton region of Western Australia, and is characterised by a large folded banded iron formation and granite complex under approximately 100m of Cretaceous Carnarvon Basin sediments (Figure 8).

Figure 8. Whaleshark Project location and surface geology.

The Company has recently completed a passive seismic survey to map the depth to basement and basement topography across the Project.

Passive seismic horizontal to vertical spectral ratio (HVSR) surveying is a geophysical technique which uses “seismic noise”, ambient-acoustic energy caused by human activities and atmospheric events such as earthquakes and ocean waves, to measure depth to fresh bedrock beneath unconsolidated or poorly lithified cover sediments and/or weathered crystalline bedrock. HVSR passive seismic works on the basis that ambient shear waves travel slower through regolith cover, poorly consolidated sediments and/or weathered bedrock compared to fresh and/or crystalline bedrock.

The Whaleshark Project, with unconsolidated Cretaceous sediments overlying crystalline Proterozoic basement rocks, therefore theoretically provides an excellent environment for the use of the passive seismic HVSR technique to map depth to basement and basement topography.

Miramar field staff collected a total of 418 stations across the Project using a series of eight TROMINO seismometers. Data was collected along lines with station intervals of 200m and on a grid over the location of diamond drilling conducted in 2023. Reading time for each station was 20 minutes.

Following the completion of the survey, the dataset was compared with information from historic and recent drilling and was found to be accurate to within a few metres.

Key findings from this survey include:

- Interpreted basement depths range from 29m to 143m
- As Miramar’s 2022 aircore drilling was able to reach depths of up to 147m, most of the Project is therefore amenable to bedrock testing with relatively inexpensive aircore drilling
- Basement depth increases towards the northwest, but not as quickly as expected
- Cover depth over the Blackfish magnetite targets is in the order of 25-40m
- There is basement topography observed in the area tested by the 2023 diamond drilling campaign which could have impacted modelling of gravity data used to target that drilling

The new passive seismic data will be used along with recent and historical geochemical and geophysical data to plan future exploration for gold, copper and magnetite at Whaleshark.

A gridded surface of the depth to basement is shown in Figure 9.

Figure 9. Depth to basement and targets over 1VD magnetic image.

The Company has estimated an initial magnetite “Exploration Target” for the Whaleshark Project as shown in Figure 10 and summarised in Table 1.

By using modelled geophysical data, geological logging and assay results from historical drilling within the Whaleshark magnetic anomaly and extrapolating those results to the two banded iron formations south of the Whaleshark Granodiorite, the Company has outlined a significant potential volume of magnetite iron ore, with the midpoint in the order of 1 Billion tonnes.

The Whaleshark Exploration Target compares favourably with several WA magnetite projects.

Table 1. Whaleshark Exploration Target Summary

Domain	Tonnage Range (Mt)		Grade Range (Fe %)	
	Lower	Upper	Lower	Upper
Whaleshark	128	384	25	30
Blackfish North	158	1,050		
Blackfish South	126	919		
TOTAL (Mt)	411	2,353	25	30

Cautionary Statement:

The above Exploration Target has been prepared and reported in accordance with the 2012 edition of the JORC Code. The potential quantity and grade are conceptual in nature and there has been insufficient exploration to estimate a Mineral Resource. It is uncertain if further exploration will result in the estimation of a JORC-compliant Mineral Resource.

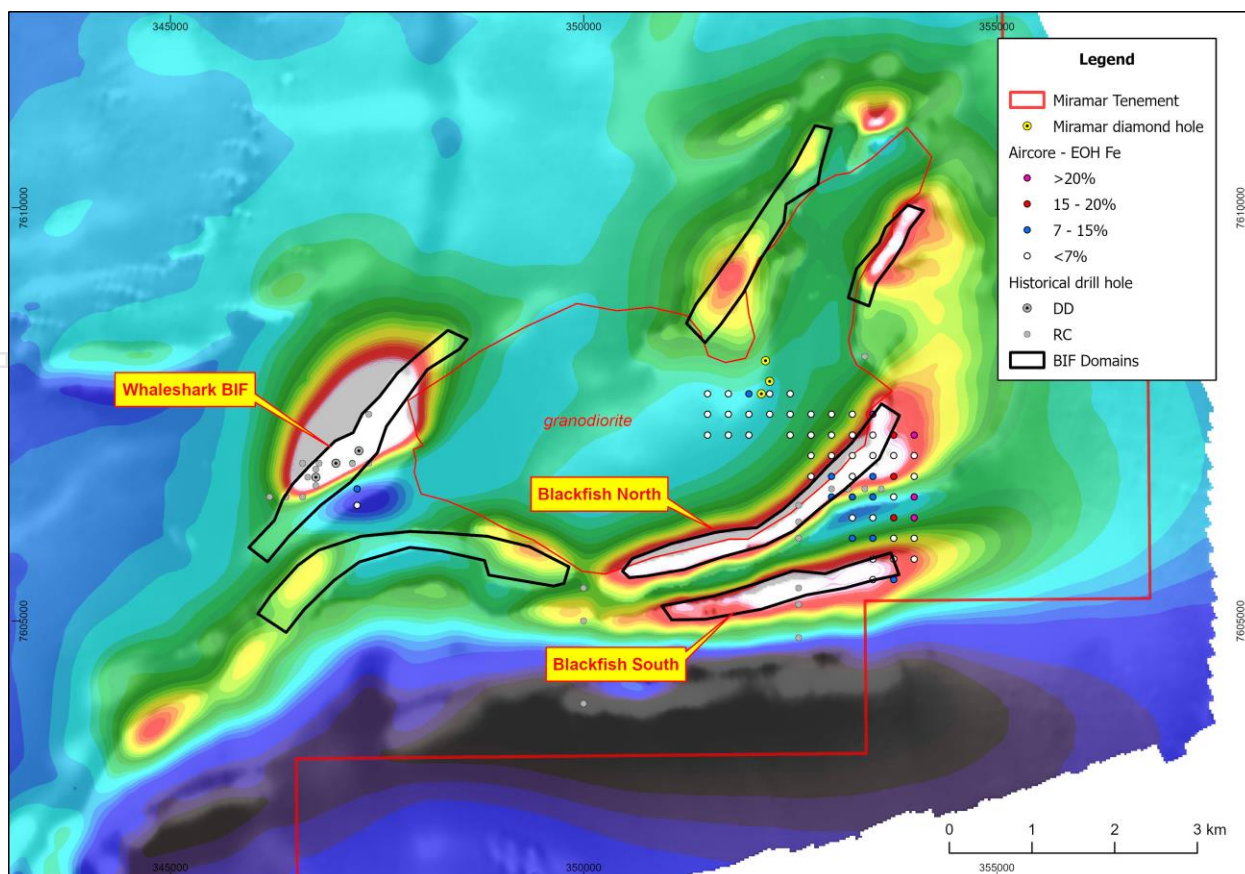

Figure 10. Whaleshark BIF Domains and limited drilling.

Other Gascoyne Projects

Carnarvon Sands

Miramar Resources has two Exploration Licence Applications north of Carnarvon where multiple heavy mineral strandlines are seen within a coastal embayment (Figure 11).

The strandlines have formed as a result of sediments containing heavy minerals being transported down the Gascoyne River and being deposited further north along the coastline.

Previous exploration is limited, but heavy minerals containing rare earth elements, such as monazite and xenotime, have been reported from sampling in the area.

Figure 11. Carnarvon Sands Project applications in relation to coastal embayment and strandlines.

Chain Pool

The Chain Pool Project is located approximately 275km northeast of Carnarvon in the Gascoyne region of Western Australia and straddles the boundary between the Gascoyne Province and the Edmund Basin.

The Project currently comprises one Exploration Licence application, E08/3676 (Figure 12).

The western half of the tenement covers a granitoid intrusion of the Durlacher Supersuite, which is the same unit that hosts the Yangibana and YIN REE deposits further south.

The eastern half of the tenement covers sediments of the Edmund Basin intruded by 1465Ma dolerite sills and includes the historic Joy Helen Cu-Pb-Zn-Ag occurrence.

Both geological sequences are crosscut by later dykes of the 750Ma Mundine Well Suite which is the same unit that hosts the Mangaroon Ni-Cu-PGE occurrence further south.

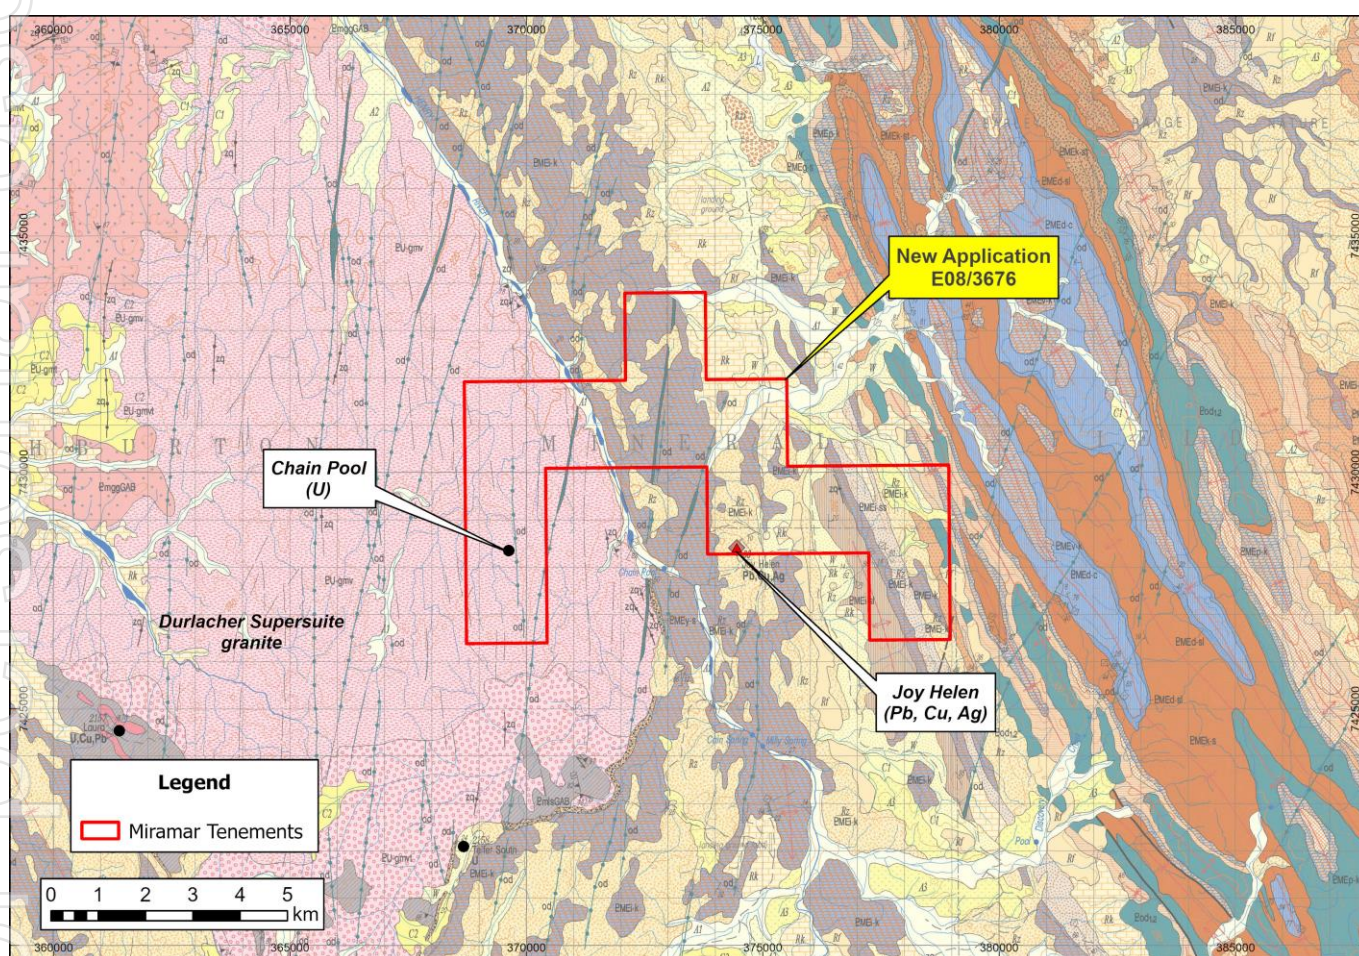

Figure 12. Application E08/3676 showing GSWA geology and mineral occurrences.

CORPORATE

At the end of the Quarter, the Company had cash on hand as of approximately \$0.4 million. The Company also held shares in listed entities worth approximately \$32,000.

The Company completed a Placement to raise \$446,000 (before costs), announced a Non-Renounceable Entitlement Issue for Eligible Shareholders and also received the following payments:

- \$157,334 refund for Whaleshark EIS co-funded diamond drilling completed during 2023
- \$289,316 Research and Development refund for aircore drilling conducted at Whaleshark in 2022

Related Party payments for the Quarter, as outlined in Appendix 5B at section 6.1, total \$132,000 and included amounts paid to directors including salary, directors' fees and statutory superannuation.

Since Listing in October 2020, Miramar has maintained a high proportion of exploration expenditure, compared with administrative overheads, averaging approx. 72% of cashflow to date and in line with the Use of Funds in the Company's 2020 IPO Prospectus (Figure 13).

Refer to the accompanying Appendix 5B for an overview of the Company's finances during the Quarter.

Figure 13. Quarterly Exploration expenditure versus administration overheads.

Subsequent to the end of the Quarter, the Company completed the Entitlement Offer and successfully raised \$1.58 million (before cost). Refer to the announcement released on 23 July 2024.

Capital Structure as of 30 June 2024

Description	Number
Fully paid ordinary shares	197,389,780
Unlisted options exercisable at \$0.07 on or before 15 June 2025	250,000
Unlisted options exercisable at \$0.20 on or before 26 June 2025	3,000,000
Unlisted options exercisable at \$0.27 on or before 3 November 2025	1,500,000
Unlisted options exercisable at \$0.08 on or before 18 August 2026	25,000,000
Unlisted options exercisable at \$0.031 on or before 8 November 2027	6,000,000
Performance Rights Class A expiring on or before 30 June 2025	366,280
Performance Rights Class B expiring on or before 30 June 2025	366,280
Performance Rights Class C expiring on or before 30 June 2025	313,953

Marketing and Investor Relations

During the Quarter, the Company attended and/or presented at the following conferences:

- RIU Sydney Resources Roadshow
- Gold Coast Investment Showcase

Project Generation and Business Development

The Company regularly reviews tenement and project opportunities with a focus on underexplored gold, copper and other critical mineral projects in world-class mineral provinces.

Upcoming 2024 Work Programmes

The Company is planning the following activities for the remainder of 2024, pending relevant approvals:

- Initial reconnaissance field trip to Chain Pool Project - completed
- Maiden RC drilling programme at Mount Vernon and Trouble Bore
- Testing of bedrock drill targets at Gidji JV
- Ongoing examination of magnetite and other mineral potential at Whaleshark
- Soil sampling at Chain Pool once E08/3676 is granted
- Progressing various tenement applications to grant

This announcement has been authorised for release by Mr Allan Kelly, Executive Chairman on behalf of the Board of Miramar.

Competent Person Statement

The information in this report that relates to Exploration Targets or Exploration Results is based on information compiled by Allan Kelly, a “Competent Person” who is a Member of The Australian Institute of Geoscientists. Mr Kelly is the Executive Chairman of Miramar Resources Ltd. He is a full-time employee of Miramar Resources Ltd and holds shares and options in the company.

Mr Kelly has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to Qualify as a “Competent Person” as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’. Mr Kelly consents to the inclusion in this presentation of the matters based on his information and in the form and context in which it appears.

Information on historical exploration results for all Miramar’s projects, including JORC Table 1 and 2 information, is included in the Miramar Resources Limited Prospectus dated 4 September 2020.

Information on recent exploration results for all Miramar’s projects, including JORC Table 1 and 2 information, is included in the relevant ASX announcements as shown in the following table.

Add notes as necessary for an understanding of the sources of finance available to the entity.</i>	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
7.1	Loan facilities	–	–
7.2	Credit standby arrangements	–	–
7.3	Other (please specify)	–	–
7.4	Total financing facilities	–	–
7.5	Unused financing facilities available at quarter end		–
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8.	Estimated cash available for future operating activities	\$A'000
8.1	Net cash from / (used in) operating activities (item 1.9)	172
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(344)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(172)
8.4	Cash and cash equivalents at quarter end (item 4.6)	394
8.5	Unused finance facilities available at quarter end (item 7.5)	–
8.6	Total available funding (item 8.4 + item 8.5)	394
8.7	Estimated quarters of funding available (item 8.6 divided by item 8.3)	2.29
	<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8	If Item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1	Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
	Answer: N/A	
8.8.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
	Answer: N/A	

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 26 July 2024

Authorised by: Allan Kelly, Executive Chairman

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg *Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
