By e-lodgement

**12 November 2024****Zavalievsky Graphite Exceeds Production Target**

Established graphite producer and natural graphite anode developer Volt Resources Limited (ASX: VRC) (“Volt” or “the Company”) is pleased to update the shareholders on Zavalievsky Graphite (ZG) production progress.

As announced to the shareholders on 15 October 2024 “Successful Restart of Graphite Production at Zavalievsky Graphite”, the production campaign started on 14 October 2024. As at 10 November 2024, ZG successfully produced 638 tonnes of graphite exceeding the target of 550 tonnes. During this campaign, ZG produced various graphite grades starting with high quality graphite ore via multi shift operation. Details of the production are as follows:

Start of operation – 14 October 2024  
Number of production days up to 10 November 2024 – 12  
Total production up to 10 November 2024 – 638 tonnes  
Average production – 53 tonnes per day

Whilst the production target has been reached, the production campaign will continue. The Company plans to provide another update at the conclusion of the current production campaign.

**About Volt Resources Limited**

Volt Resources Limited (“Volt”) is critical minerals and battery material company listed on the Australian Stock Exchange under the ASX code VRC. We are an established graphite producer and an emerging natural graphite anode (a key component of lithium-ion batteries) manufacturer.

In 2021, Volt acquired 70% interest in each of the companies comprising the ZG Group, namely - Zavalievsky Graphite LLC (processing plant buildings, processing plant, mining equipment, power sub-station, and distribution), Stone Found LLC (crushed granite operations), and Graphite Invest LLC (holds a 79% interest in PJC Zavalievsky Graphite Kombinat – mine, land, main administration office building. It is this entity that holds the 636 hectares of freehold land on which the Zavalievsky mine, and other related buildings and facilities are located) [1].

Volt acquired three licence applications that are prospective for lithium-borate mineralisation. The licence applications are in respect to a total area of 291 km<sup>2</sup>, located in Serbia and are west and south-west of the Serbian capital, Belgrade[2]

Volt is also progressing the development of its large wholly owned Bunyu Graphite Project in Tanzania. The Bunyu Graphite Project is ideally located near critical infrastructure with sealed roads running through the project area and ready access to the deep-water port of Mtwara. In August 2023, Volt reported the completion of the revised Feasibility Study (“FS”) for Stage 1 development of the Bunyu Graphite Project. The Stage 1 development is based on a mining and processing plant with annual throughput rate of 400,000 tonnes of ore to produce on average 24,780 tpa of graphite products[3]. Key objectives of Stage 1 development are to establish Bunyu Graphite Project as a world-class supplier of graphite products, grow Volt's existing natural flake graphite business, provide cashflow, and establish infrastructure in support of the development of the significantly larger Stage 2 expansion project.

Volt's wholly owned subsidiary, Volt Energy Materials LLC, is headquartered in EcoComplex “Clean Energy Centre” in New Jersey, US. EcoComplex has laboratories which provide bench space for wet chemistry, chemical hoods, vented hood, a clean room, separate gas storage, and laboratory refrigeration. This facility also offers 1,200 square feet, two story scale-up space, specifically designed for pilot scale demonstration of new clean technologies.
