Santos

ASX / Media Release

19 November 2024

Santos announces updated capital allocation framework and carbon storage growth target

Santos today announced an updated capital allocation framework that will target returns to shareholders of at least 60 per cent of all-in free cash flow from 2026, following a period of major capital investment to bring significant new production online from the Barossa and Pikka projects.

In addition, Santos announced a carbon storage growth target to build and operate a commercial carbon storage business that would permanently store approximately 14 million tonnes of third-party CO2e per annum by 2040.

The target is equivalent to around 50 per cent of Santos' 2023 equity Scope 3 emissions from the combustion and use of our products.

The successful startup of Santos' 1.7 million tonnes per annum Moomba Carbon Capture and Storage (CCS) project last month, with the technology and reservoirs performing as expected, demonstrates the potential for future phases to provide safe, low-cost, permanent carbon storage for customers and hard-to-abate industries.

Speaking at the company's Investor Day in Sydney, Managing Director and Chief Executive Officer Kevin Gallagher said today's announcement confirms Santos' commitment to prioritise shareholder returns when new production comes online and to support the global energy transition while generating new revenue streams for the business.

"Santos has been unrelenting in sticking to its strategy and implementing its disciplined operating model," Mr Gallagher said.

This continues to deliver strong production and project execution to backfill our infrastructure with highlights including:

- + Angore wells in PNG now online with two wells successfully commissioned and connected, supplying up to 350 million standard cubic feet of gas per day to sustain PNG LNG production
- + Commencing drilling of the highly prospective Hides Footwall structure
- Barossa now 84 per cent complete with first gas expected in third quarter 2025
- + Pikka now ~70 per cent complete with first oil expected by the first half of 2026.

Santos' world-class LNG portfolio is backed by long-term contracts with tier one buyers and flexible contract terms to provide risked upside potential.

"The proximity of our projects to Asian markets provides a significant shipping cost and emissions advantage compared to supply from east coast US and Middle East suppliers," Mr Gallagher said.

"We are delivering on our strategy to develop upstream production to backfill and sustain our leading infrastructure position, decarbonise our operations and build a commercial carbon management services and low-carbon fuels business to meet future demand.

With Barossa and Pikka coming online, Santos' production is expected to increase by more than 30 per cent by 2027 compared to 2024, significantly lowering unit production cost which will support strong free cash flow generation throughout the commodity price cycle.

¹ This is a target not a forecast and is a growth target for gross storage from Santos operated carbon storage projects. The target is ambitious and subject to substantial engineering, finance, commercial and policy work to establish enabling frameworks with customers, governments, regulators and other stakeholders. The potential projects that would enable achieving the target remain at an early phase of planning and commercial and economic viability is still to be confirmed.

"The simplified capital allocation framework announced today reflects our commitment to prioritise shareholder returns following the company's investment over recent years in new production from Barossa and Pikka.

"From 2026 we will return at least 60 per cent of all-in free cash flow to shareholders, and when gearing is below our target range of 15-25 per cent, 100 per cent of free cash flow will be returned to shareholders in the form of dividends and/or buybacks.

The market outlook for LNG into Asia, domestic gas in Australia and liquids remains strong out to 2040 and beyond.

"2024 is set to be another peak consumption year for hydrocarbon fuels globally, making it increasingly clear that decarbonisation of their production and use is critical to the world's net zero goals.

"Santos has a leading infrastructure and adjacent resource position that makes it well placed to meet ongoing demand with low-cost production.

"We have a wealth of backfill options to sustain production at our Gladstone and PNG LNG plants, which will be Santos' top priority for future development capital – provided it fits within our capital allocation framework following the startup of Barossa and Pikka.

These options include unlocking new geological plays in the Cooper Basin, which we have been appraising over the last few years, and prolific gas resources in the McArthur (Beetaloo) Basin shales in the Northern Territory as well as in the PNG Hela, Eastern Highlands and Gulf Provinces.

Very importantly, our gas resources and LNG facilities are close to large-scale, relatively low-cost carbon storage resources and existing infrastructure that can be repurposed for CCS.

"The International Energy Agency's Net Zero Emissions by 2050 (IEA NZE) scenario assumes that 70 per cent of global gas demand will be served with abated gas through CCS.

"We are extremely proud of the performance to date of the first phase of Moomba CCS that has now stored more than 150 thousand tonnes of CO2.

"Moomba CCS is groundbreaking as one of the world's largest and lowest-cost CCS projects, dedicated to permanent CO2 storage.

This first phase of Moomba CCS will safely and permanently store up to 1.7 million tonnes of CO2 per year, depending on CO2 availability.

That is equivalent to 70 per cent of Australia's total annual net emissions reduction in 2023."²

"The IEA NZE scenario assumes more than 2.5 billion tonnes of CO2 will be stored globally each year by 2035, about 50 times more than today.

The success of Moomba CCS to date and the strong outlook for CCS demand growth gives us a high level of confidence in setting our new carbon storage growth target to build and operate a commercial carbon storage business.

"With a strong balance sheet, line of sight to long-term, cash-generative production and a healthy portfolio of sustainable backfill and expansion options, I am confident Santos can continue to deliver superior value for shareholders over the long term," Mr Gallagher said.

Guidance

There is no change to Santos 2024 production, unit cost and capital expenditure guidance.

Santos will provide 2025 guidance with our 2024 fourth quarter report in January 2025.

Live Webcast

A live webcast of the 2024 Investor Day will be available on the Santos website at www.Santos.com from 8.30am ACDT today.

Disclaimer and important notice

This presentation contains forward looking statements that are subject to risk factors associated with the oil and gas industry, and the carbon capture and storage and carbon emissions reduction technologies industries. It is believed that the expectations reflected in these statements are reasonable, but they may be affected by a range of variables which could cause actual results or trends to differ materially, including but not limited to: price fluctuations on any products we produce, store, trade or capture, actual demand, currency fluctuations, geotechnical factors, drilling and production results, gas commercialisation, development progress, operating results, engineering estimates, reserve estimates, loss of market, industry competition, environmental risks, carbon emissions reduction and associated technology risks, physical risks, legislative, fiscal and regulatory developments, economic and financial markets conditions in various countries, approvals, conduct of joint venture participants and contractual counterparties and cost estimates. The forward-looking information in this presentation is based on management's current expectations and reflects judgements, assumptions, estimates and other information available as at the date of this document and/or the date of Santos' planning processes. Except as required by applicable regulations or by law, Santos does not undertake any obligation to publicly update or review any forward looking statements, whether as a result of new information or future events. Forward looking statements speak only as of the date of this presentation or the date planning process assumptions were adopted, as relevant. Our strategies and targets will adapt given the dynamic conditions in which we operate; it should not be assumed that any particular strategies, targets or implementation measures are inflexible or frozen in time.

No representation or warranty, express or implied, is given as to the accuracy, completeness or correctness, likelihood of achievement or reasonableness of any forward looking information contained in this presentation. Forward looking statements do not represent guarantees or predictions of future performance, and involve known and unknown risks, uncertainties and other factors, many of which are beyond Santos' control, and which may cause actual results to differ materially from those expressed in the statements contained in this presentation.

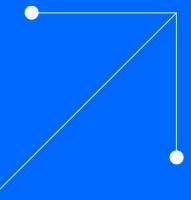

All references to dollars, cents or \$ in this document are to United States currency, unless otherwise stated.

Underlying profit, EBITDAX (earnings before interest, tax, depreciation, depletion, exploration and evaluation expensed, change in future restoration assumptions and impairment) and free cash flow from operations (operating cash flows less investing cash flows net of acquisitions and disposals and major project capex, less lease liability payments) are non-IFRS measures that are presented to provide an understanding of the performance of Santos' operations. The non-IFRS financial information is unaudited however, the numbers have been extracted from the audited financial statements. Free cash flow breakeven is the average annual US\$ oil price at which cash flows from operating activities (before hedging) equals cash flows from investing activities. Excludes one-off restructuring and redundancy costs, costs associated with asset divestitures and acquisitions, and major project capex. Includes lease liability payments. Forecast methodology uses corporate assumptions.

The estimates of petroleum reserves and contingent resources contained in this presentation are as at 31 December 2023. Santos prepares its petroleum reserves and contingent resources estimates in accordance with the 2018 Petroleum Resources Management System (PRMS) sponsored by the Society of Petroleum Engineers (SPE). The reserves and resources information in this presentation is based on, and fairly represents, information and supporting documentation prepared by, or under the supervision of, Paul Lyford, who is a full-time employee of Santos and is a member of the SPE. Dr Lyford meets the requirements of a QPRRE and is qualified in accordance with ASX Listing Rule 5.41. Conversion factors: 1PJ of sales gas and ethane equals 171,937 boe; 1 tonne of LPG equals 8.458 boe; 1 barrel of condensate equals 0.935 boe; 1 barrel of crude oil equals 1 boe.

This is a target not a forecast and is a growth target for gross storage from Santos operated carbon storage projects. The target is ambitious and subject to substantial engineering, finance, commercial and policy work to establish enabling frameworks with customers, governments, regulators and other stakeholders. The potential projects that would enable achieving the target remain at an early phase of planning and commercial and economic viability is still to be confirmed.

Santos acknowledges that we are meeting on the traditional land of the Gadigal people of the Eora Nation and we pay our respects to Elders past and present.

Agenda

Session one Session two Capital management and finance Welcome 10.30am 09:00am Sherry Duhe, Chief Financial Officer Kevin Gallagher, Managing Director and CEO **Portfolio update** LNG portfolio backfill and growth 09:10am 10.45am Kevin Gallagher, Managing Director and CEO Brett Darley, EVP Eastern AU & PNG **Santos Energy Solutions Market outlook** 10.00am 11.05am Sean Pitt, Vice President Marketing Alan Stuart-Grant, EVP Santos Energy Solutions Close & Q&A **Morning tea break** 10:15am 11:20am Kevin Gallagher, Managing Director and CEO

Personal and process safety performance

Safety is a core value for Santos, we are focused on continuous improvement

LTIR improved over last 3 years since COVID

Majority of incidents from contractors. Increased focus on contractor management and frontline leadership

Held company-wide annual Stand Together for Safety in November

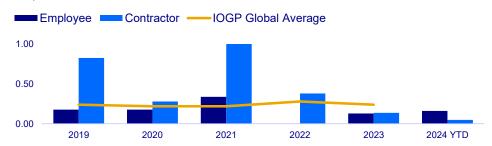

Introduced a Behavioural Based Safety Programme across all operations throughout 2024

Continued reduction in loss of containment events resulting from a focus on asset integrity maintenance strategies

Lost time injury rate¹

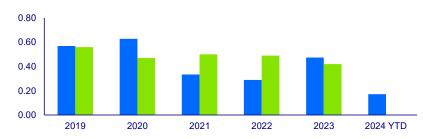

Rate per million hours worked

Loss of containment incident rate², Tier 1 and 2

Rate per million hours worked

Lost Time Injury Rate is the number of Lost Time Injuries per million work hours

Loss of containment incident is a sub-set of loss of primary containment, where the unplanned or uncontrolled release of hydrocarbon from primary containment has also breached secondary containment or risk is
people/environment and the incident could have been reasonably or practicably prevented by Santos through design, installation or maintenance

World class LNG infrastructure portfolio to meet growing Asian demand

Producing Status

LNG customers - Sinopec, Osaka, CPC and Jera

Customers

- · 79 cargoes delivered year to date as at 31 October 2024. On track to deliver 98 cargoes by year end
 - · Sale of a 2.6 per cent interest in PNG LNG to Kumul Petroleum Holdings Limited completed on 4 November 2024
 - · Strong production with Santos operated assets producing 8.9 mmboe (Santos share) YTD as at 31 October 2024, up 12 per cent on the same period last year
 - 21 per cent of PNG LNG supply delivered from Santos operated project gas
 - · Angore online

Producing

LNG customers - Petronas and Kogas GLNG committed to swapping 18 PJ (gross) of gas to the domestic market in 2024

- · 80 cargoes delivered year to date, as at 31 October 2024, on track to deliver 100 cargoes by year end (~6 Mtpa)
- · GLNG Train 1 shutdown successfully executed
- GLNG 2024 expected gas supply mix:
 - 62 per cent GLNG upstream equity gas
 - 15 per cent other Santos equity gas (including Cooper Basin)
 - · 23 per cent other third-party gas supply
- · On track to drill >330 wells across GLNG and Cooper Basin acreage in 2024

First Gas Q3 2025

LNG customers - Diamond International (Mitsubishi)

- Barossa progress is 83.5 per cent complete as at 31 October 2024
- DLNG
 - DLE progress is 67 per cent complete as at 31 October 2024
- Bayu-Undan
 - Continues to produce into NT domestic market

PNG operational insights

PNG reliability at all-time record levels and PNG drilling surprising on the upside

Production: Strong production from operated fields. Record oil production rates supported by most recent infill oil well drilled

Drilling activities: Angore drilled and online. Infill oil drilling program completed. Spudded Hides Footwall 2

Reliability improvement: Record operated equipment reliability in 2024

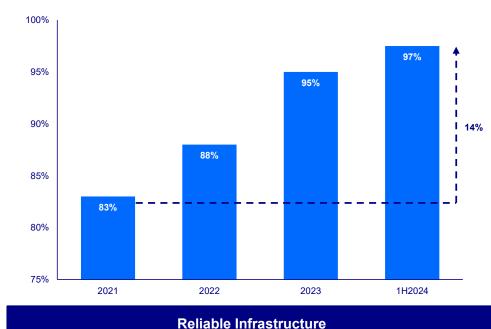

Price reviews: Three of four long-term price reviews completed in 2024

Sell-down completion: Successfully completed sale of 2.6 per cent of PNG LNG to Kumul on 4 November 2024

Operated CPF reliability

High reliability increases gas volumes to PNG LNG facility

Angore gas development project

Exciting next phase of major LNG development for PNG

Wood Mackenzie - Levelised costs for a 1.7 Mtpa natural gas processing plant with offshore storage in a saline aquifer, Nov-2024. Capture, transport and storage are levelised costs in US\$/t

Net-Zero target

Santos announces new third-party carbon storage growth target of ~14 Mtpa, equivalent to 50 per cent of Santos' 2023 equity Scope 3 emissions from combustion and use of our products^{1,2}

2025

Reduced emissions across the Cooper Basin and Queensland by

Increased liquified natural gas exports to at least

4.5 Mtpa

2030

30 per cent

Reduction in Scope 1 & 2 emissions³

40 per cent

Reduction in Scope 1 & 2 emissions intensity⁴

Reduce customers' emissions, Santos Scope 3 by at least

1.5 Mtpa of CO2e⁵

from the supply of low carbon fuels and carbon management services

Aiming for near zero methane emissions⁶

Zero routine flaring⁷

2040

Net-Zero

Scope 1 & 2 emissions (equity share)

Build and operate a commercial carbon storage business, safely and permanently storing ~14 Mtpa of third-party CO2e, equivalent to 50 per cent of Santos' 2023 equity estimated downstream Scope 3 emissions⁸

NEW

Beyond

Aspiration to store more carbon than we emit across Scope 1, 2 and 3 emissions

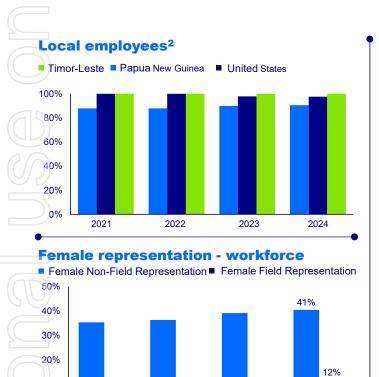

- 1. Refer to disclaimer in last paragraph on slide 2
- Actual volumes depend on availability of CO2 for storage
- 30 per cent absolute reduction is from the Santos and Oil Search combined 2019-20 equity Scope 1 and 2 emissions baseline of 5.9 MtCO2e, representing a reduction to 4.1 MtCO2e or lower by 2030
- 40 per cent intensity reduction is equity share of Santos Scope 1 and 2 emissions intensity from a 2019-20 baseline of 55 ktCO2e/mmboe, representing a reduction to 33 ktCO2e/mmboe or lower by 2030
- 5. From the supply of low carbon fuels and carbon management services
- 6. Methane emissions intensity of <0.20 per cent from operations, calculated as a percentage of marketed natural gas
- Zero routine flaring from Santos' operated oil assets where economically viable
- The target equates to 50 per cent of Santos' reported 2023 downstream Scope 3 emissions

Strong long-term LNG demand

Santos is strategically positioned to supply lower cost, lower carbon LNG to the Asia Pacific region

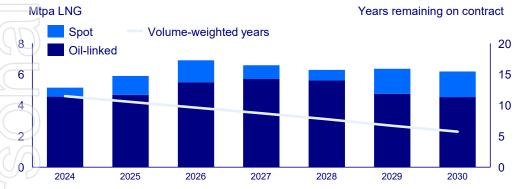

Strong position in Asian market

Superior LNG pricing achieved through contracting strategy and low-cost / low-emission shipping position

Proximal to Asian demand centres¹

Long-term LNG contracts with highly rated Asian LNG buyers²

Strengths of Santos' LNG portfolio

- Strategically located portfolio proximal to Asian demand centres
- · Low-cost and low-emission shipping
- Largely contracted LNG portfolio, with uncontracted volumes available for future demand
- · LNG sold under contract to high-quality counter-parties
- High-quality LNG with high heating value resulting in higher realised prices

Realised LNG pricing³

Kpler - Platform for global trade intelligence. Estimated shipping duration to Futtsu Japan at vessel speed of 17 knots Includes the GLNG joint venture option to extend an agreement for a five-year period

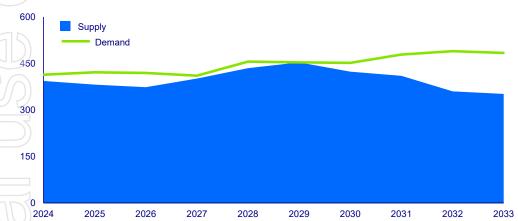

US Exports to Asia sourced from Wood Mackenzie LNG Tool, Q3 2024, DES contracts delivered to Japan & South Korea. Total Aust LNG Exports sourced from Energy Quest plus a 50c/mmBtu shipping charge added

Domestic gas supply critical for energy security

New supply is needed to meet long-term demand, keep the lights on and manufacturing running

West coast domestic gas market¹

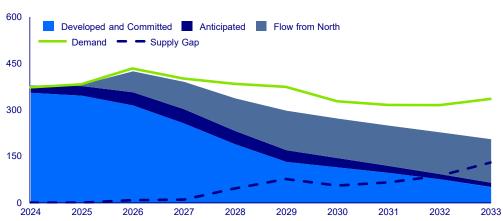

PJ per annum

- Tight market forecast this decade, moving to an increasing supply deficit from 2030
- New gas supply required to meet forecast demand in all scenarios
- Western Australian assets have backfill opportunities (e.g. Corvus)

East coast domestic gas market (southern regions)²

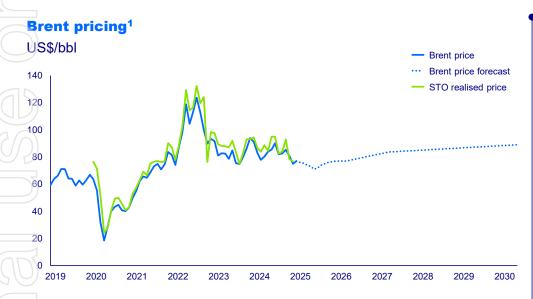

PJ per annum

- Risk of shortfalls on extreme peak demand days from 2025
- Potential seasonal supply gaps forecast from 2026
- Additional supply available via Narrabri Gas Project

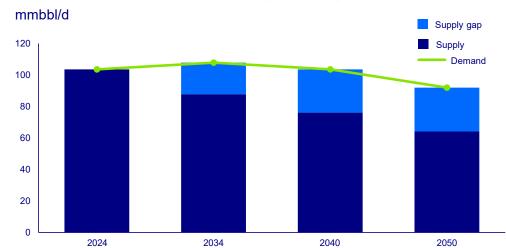

Oil demand growing this decade

Developing Alaska to meet oil demand this decade

- Santos' portfolio of high-quality liquids reliably trades at a premium to Brent.
- In 2024, this premium has averaged US\$3.60 per barrel year to date

Global liquids demand and supply capacity²

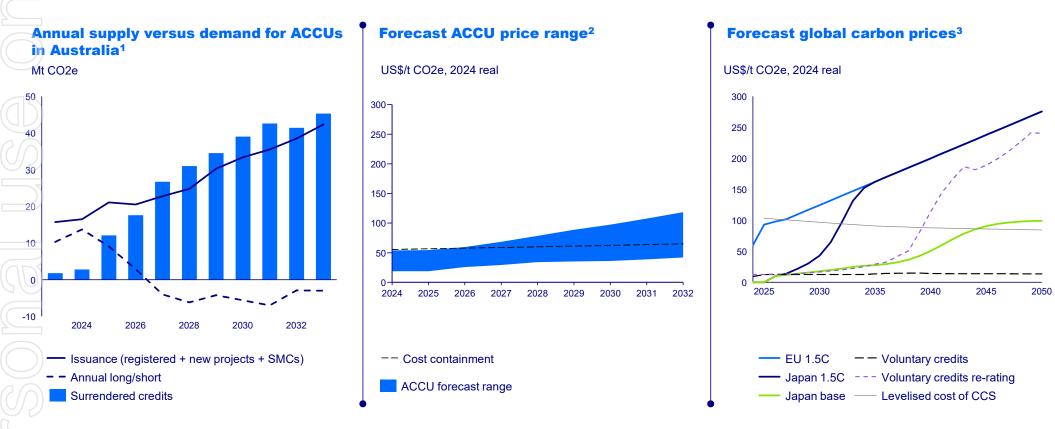

- By 2034, additional supply will be required to meet growing demand as existing production declines
- Demand growth shifts to India and emerging Asian economies post 2030
- Non-energy (or non-combustion use i.e. for petrochemical feedstock) is forecast to continue to grow beyond the 2030s

S&P Commodity Insights, Global Crude Oil Markets Short Term Outlook Fundamentals, October 2024. S&P Global Fundamentals Crude Oil Markets Price Long-Term Outlook, Q3 2024, nominal prices. Marketing portfolio overview

Santos' marketing strategy is well positioned to deliver value

Strategic location of LNG portfolio

Close to Asian customers, shorter shipping duration through safe passage

Lower shipping emissions and cost

Offer longer term emission capture and storage solutions

High value LNG

Majority of portfolio with high heating value, commanding a premium

Range of mid-term, long-term and spot contracts reducing market risk

Oil linked 83 per cent, JKM linked 17 per cent¹

Leveraged existing infrastructure

Well positioned to supply domestic market

New supply needed to meet demand

New supply to market is available from our portfolio (e.g. Corvus and Narrabri)

Well placed to supply new oil demand

Oil demand globally remains strong with additional supply required in 2030s

Santos liquids realise premiums to Brent

Alaska captures strong interest for oil in SE Asia at a premium to Brent

Year to date as at 30 September 2024

Santos

CAPITAL MANAGEMENT AND FINANCE

What you will hear today

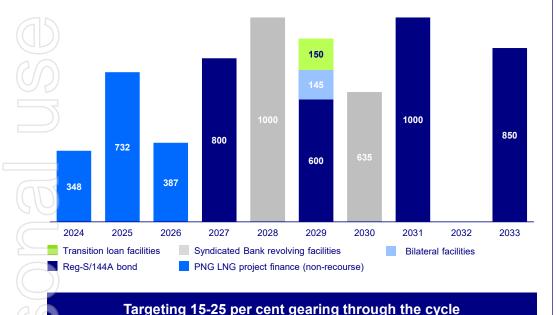

- 1 Updated Capital Allocation Framework prioritising shareholder returns
- Continue to drive the disciplined low-cost operating model
- 3 Development optionality enabling decades of sustainable returns

Strong balance sheet, balanced portfolio

Recent financing demonstrates the strength and diversity of the portfolio, target gearing remains a priority

Drawn debt maturity profile1

US\$ million

Successful recent financing activity in 2024

- Execution of Moomba CCS transition loan \$150 million (February)
- Revolving syndicated facility increased to \$850 million (September)
- New syndicated bank loan facilities totalling \$800 million for Darwin LNG life extension works² (October)
- Completion of 2.6 per cent sale of PNG LNG to Kumul Petroleum Holdings Ltd (November)

\$4.27b

\$2,215m cash

\$2,060m committed undrawn facilities

Debt maturity profile as at 31 October 2024

Santos' 43.43 per cent interest in Darwin LNG Pty Ltd is accounted for as an equity accounted investment in an associate

Updated capital allocation framework

From 2026: Prioritised shareholder returns supported by sustained profitable production and constrained capex

Strong balance sheet

Shareholder returns

Disciplined capital reinvestment

Existing

Target gearing range maintained

15 - 25%

Target shareholder returns

>= 40%

of FCF from operations²

Prioritised shareholder returns

Update from 2026¹

At least 60% and up to 100% of all-in Free Cash Flow (FCF)³

Prioritised Shareholder Returns supported by:

Long term indicative annual production profiles

~100 - 140 mmboe

Sustainable annual production target range 2026-2030

~100 - 120 mmboe

+

Sustaining and development capital expenditure

Cyclical

Annual sustaining and development capital expenditure

Constrained by capital ceiling⁴

^{1.} Updated capital allocation framework effective following the delivery of Barossa gas project, and Pikka Phase 1, estimated HY26. Existing policy remains until that time

Free Cash Flow from operations is defined as operating cash flows less investing cash flows net of acquisitions and disposals and major growth capital expenditure less lease liabilities

All-in Free Cash Flow is defined as operating cash flows less investing cash flows net of acquisitions and disposals Capital expenditure ceiling is subject to annual Board approval

Capital allocation framework principles

From 2026: Simplified framework¹ prioritises shareholder returns and strong balance sheet

Cash flow from operations Sustaining and development capital Target sustainable production of 100-120mmboe per annum² Limit capex to prioritise shareholder returns and sustain production³ All-in Free Cash Flow⁴

Maintain strong balance sheet

- Target gearing range of 15-25 per cent maintained
- Maintain investment grade credit rating

Returns to shareholders

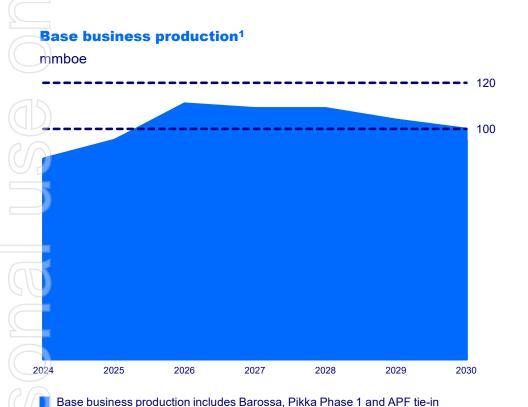

- Target returns of at least 60 per cent of all-in free cash flow generated per annum, and 100 per cent when below target gearing range
- Returns delivered via cash dividends and/or share buybacks, subject to market conditions and Board approval

Updated capital allocation framework effective following the delivery of Barossa Gas Project, and Pikka Phase 1, estimated HY26. Existing policy remains until that time 2026 to 2030

Capex constrained via capex ceiling includes spend across the Upstream Oil and Gas and Santos Energy Solutions portfolios All-in Free Cash Flow is defined as operating cash flows less investing cash flows net of acquisitions and disposals

Target annual production range 100-120 mmboe

Demonstrated delivery from current development projects maintains target production range

Culmination of three horizon strategy results in our ability to produce sustainably above 100 mmboe annually from 2026

Current committed projects enable sustaining production in this range through to 2030 with no additional major development projects required

Healthy portfolio funnel has potential to sustain production range well beyond 2030, via continued disciplined capital investment in support of prioritised shareholder returns

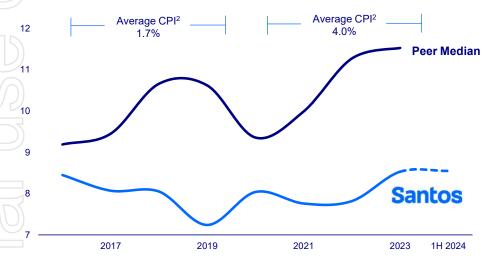

Disciplined operating model

Santos is committed to sustaining our low-cost operating model as we complete a major growth phase

Reported unit production cost v peers1

US\$/boe

Source: Wood Mackenzie, Corporate Benchmarking Tool 2024 (with the addition of Santos 1H 2024³)

Company-wide cost-out is a focus area in 2025

Emerging from a major growth phase following several significant acquisitions

Timely to reset total operating cost performance, as we continue to drive our disciplined low-cost operating model

Target setting and cost reduction actions planned in 2025, to enable reset of annual cost base targeted for full year 2026

Priority action areas will include simplification, procurement, automation, and other innovation-based efficiencies

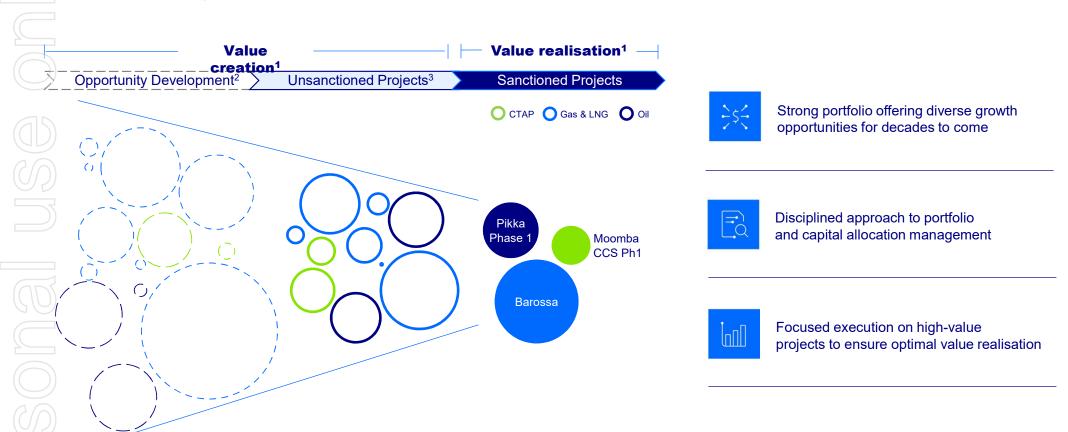

Peer group includes mid and large capital international companies from Wood Mackenzie's peer group definition

[.] Australian annual CPI sourced from the Australian Bureau of Statistics

Santos 1H 2024 reported production cost per boe in line with half-year 2024 financial report

Project portfolio enables decades of returns

Disciplined and rigorous assessment applied to phased capital allocation

Wells

Targeting 230 unconventional wells drilled in 2024 in GLNG

1. STO equity of 30 per cent

Santos

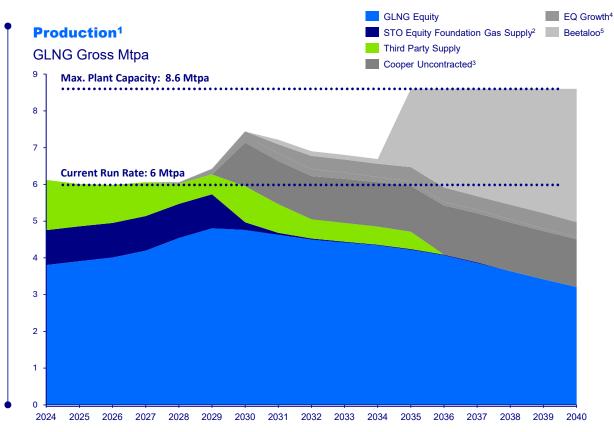

East Coast LNG

Five upstream operating fields and options for backfill of available ullage at GLNG

CSG equity gas – Record production in 2024, displacing third-party gas purchases.

STO equity gas – From 2030, STO equity foundation gas supply contract rolls off. Significant equity gas position available for both LNG and domestic gas markets

Beetaloo – Potential backfill opportunity from Santos operated Northern Territory acreage from mid-2030

Indicative forecast only. Not to be construed as guidance

STO equity includes current Horizon, Combabula and Spring Gully contracts

Cooper gas profiles excludes domestic contract volumes, includes 2C and prospective resource conversion

EQ growth includes Mahalo, Arcadia West, Kia Ora, Yoorooga

Beetaloo assumes 500TJ/d full development rate

Cooper Basin overview

Foundation gas supply for GLNG unlocking material new resources to underpin longevity of the strategically positioned asset

Horizon foundation contract supply ~50 PJ per annum to GLNG¹, ~1 Mtpa of GLNG sales volumes

Well-priced parity between LNG and East Coast domestic gas markets offers value upside post 2030

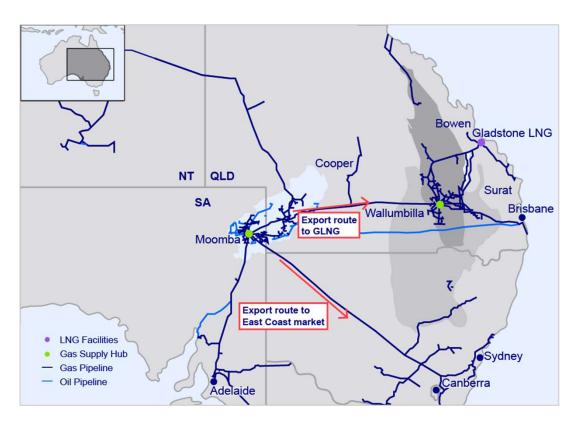

Technology advances continue to unlock new plays, significant running room remain in the basin

Optimise and modernise infrastructure around future resource plays

Moomba CCS online enables low carbon intensity operations

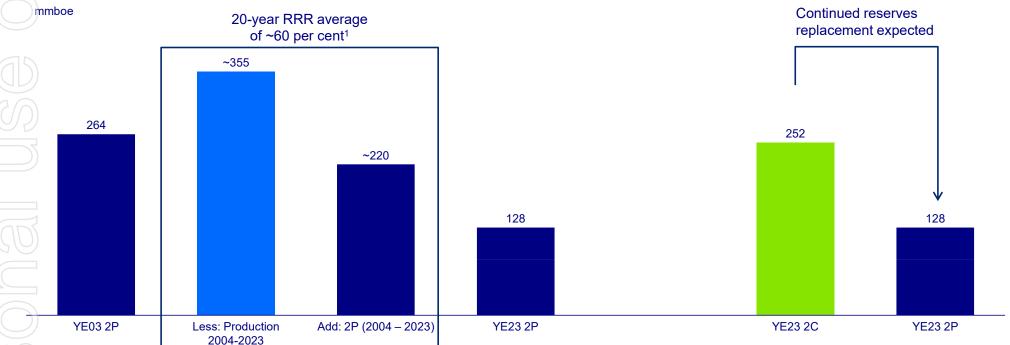

^{1.} Horizon contract delivered from Santos' eastern Australian gas portfolio, with Cooper Basin volumes being the primary source

More than just a 2P value proposition

Cooper Basin has a demonstrated history of continuous 2C and 2P replacement with significant running room remaining in the basin

Cooper Basin reserve replacement history

Has the potential to deliver another 20+ years of field life

^{1.} Reserves replacement ratio is the change in petroleum reserves (excluding production) divided by production

Cooper Basin

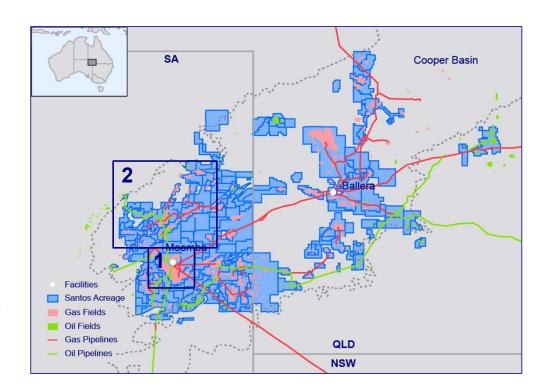

Extending the life of the Cooper Basin by developing low-cost material plays in Central fields

1. Central fields strategy

- Moomba Central Optimisation Project to reset cost base and un-constrain surface infrastructure
- Unlock material reserves and resource positions in Patchawarra and Granite Wash currently constrained
- Position for future renewable penetration to free up more sales gas

2. Northern fields

- Unlock Deep Coal resource through targeted appraisal strategy
- Future surface infrastructure optimization aligned to Deep Coal development

Moomba Patchawarra

Increasing recoverable volumes through technology advancements and driving down cost

Simultaneous Operations improving efficiency of drilling and completions operations and driving down cycle times

Real time drilling analytics tools driving continuous improvements in drilling performance

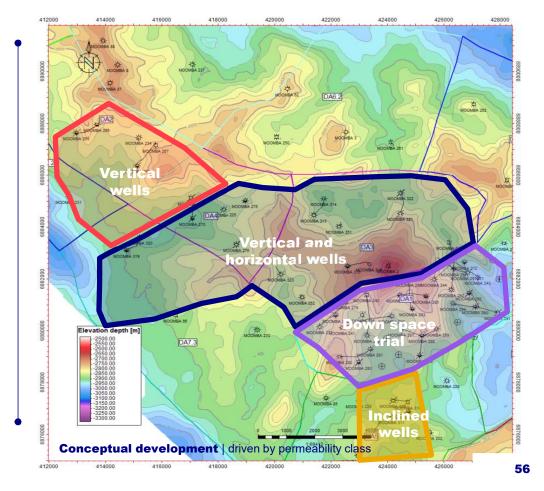

Slim-hole well designs delivering reduced well construction costs

Equipment enhancements in rig fleet, drill bits and bottom hole assemblies

Machine learning used to reduce evaluation requirements and optimising fracture stimulation target selection

Moomba Granite Wash

Unlocking material additional resources through horizontal drilling through high temperature reservoir

Proven unconventional resource currently being produced in 80 wells

Horizontal drilling has potential to increase rates from Granite Wash by 10-15x that of a single vertical frac stage

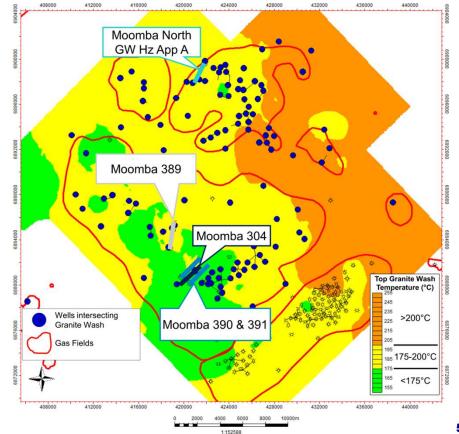

High temperature drilling technical success enabling access to hotter parts of the field (up to 200°C)

Moomba 304 delivered a high-side initial rate from a 1.5km lateral and 10 frac stages. **Moomba 389** confirmed geological model and tested alternate well orientation.

Additional wells being drilled in 2024 and 2025, targeting 2km lateral sections and 10-15 frac stages

Moomba Central Optimisation

Subsurface opportunities will drive future development, with cost-effective infrastructure upgrades to support production and reduce costs

Project Scope

Replace three aging Central Fields facilities with modernised facility with additional capacity

Benefits

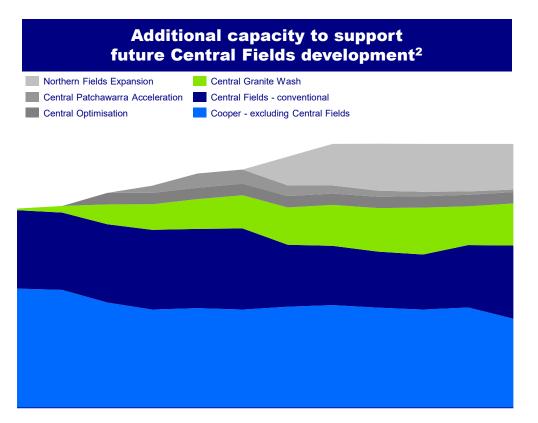

Reduced opex

Additional compression capacity

Optimisation of field pressures

Improved uptime

Targeting 20 per cent reduction in unit production cost¹

Targeting 20 per cent reduction in unit production cost compared to forecast without Moomba Central Optimisation Indicative forecast only. Not to be construed as guidance

Northern Fields: Deep Coal

Leveraging recent learnings to build development plans to unlock a multi TCF resource

Proven unconventional resources within the current producing Patchawarra formation

Currently being produced in 60+ vertical wells

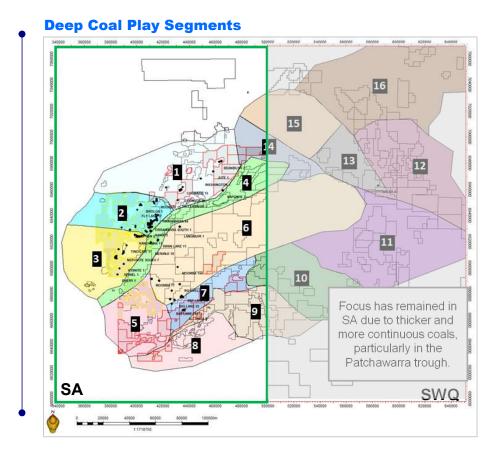

Potential for significant contribution to Cooper Basin production from early 2030s

Gloss 1 well successfully intersected 3 Patchawarra coals and a Patchawarra sand. Well currently producing 1.7 mmscf/d

Two deviated wells planned for 2025/2026

Beetaloo: Northern Australia onshore shales

Beetaloo Sub-Basin, part of the greater McArthur Basin, is estimated to contain more than 200 TCF in-place¹

EP161 is recognised as the geological "sweet spot" in the Beetaloo with 1.4 tcf gross (1.1 tcf, Santos share) 2C Resource booked from 2 wells

Normalised production from more than 20 wells are analogous to the Marcellus and Utica onshore US Shale plays²

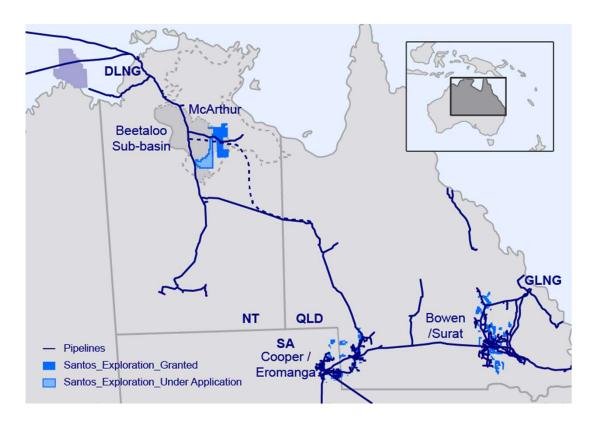

Large and scalable supply for tight, well-priced Eastern and Northern LNG export and domestic gas markets

Appraisal campaign in EP161 planned for 2026

Supportive jurisdiction with published plan for development of resource³

¹ Munson TJ, 2014. Petroleum geology and potential of the onshore Northern Territory, 2014. Northern Territory Geological Survey, Report 22

Rose and Associates Santos Internal Review and Evaluation 2023

Northern Territories Strategic Basin Plan (https://www.industry.gov.au/publications/beetaloo-strategic-basin-plan)

Beetaloo: A stacked shale play

World-class geological characteristics analogous to the Utica and Marcellus Shales

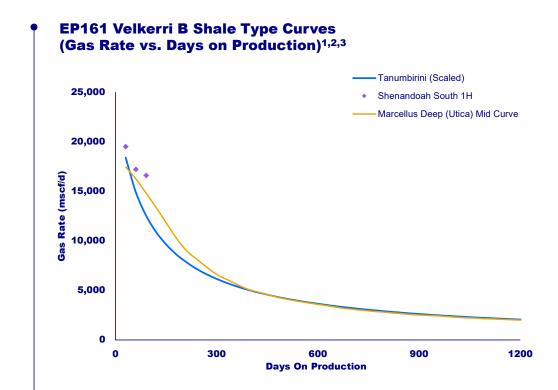

Extensive, high-quality stacked shale units in Velkerri Formation, with recent focus on production tests of Velkerri B unit

When scaled to match the proposed development well design, appraisal production test flowrates and forecast recoverable volumes compare favourably with the P50 outcomes from the successful US Deep Marcellus (Utica) shale play

Reservoir Properties are comparable with the Marcellus Shale: high gas contents and brittle nature, improving stimulation performance

Tanumbirini forecast production curve normalized to lateral length and stimulation design

^{2.} Shenandoah South 1H data extracted from Tamboran Resources Investor Day Presentation July 2024 3. P50 Marcellus Deep (Utica) curves from Novi Labs database

World-class LNG portfolio

Significant low-cost backfill optionality to expand the portfolio further

Advantaged LNG Portfolio

2024 Investor Day

Three operational LNG plants
Growing Asian demand
Comparative advantage

PNG sustained and growing

Production upsides

Near-term, low-cost backfill

Future expansion potential

GLNG backfill opportunities

Five upstream fields
6 Mtpa out to 2030
Exciting backfill potential

Cooper Basin longevity

20-year history of 2C conversion

New technology unlocking new resource plays

What you will hear today

Using midstream cashflows to develop the portfolio for the future

- 1 Established cash flow generating assets that represent privileged infrastructure
- 2 Our focus on building towards commercial carbon management services at scale
- 3 Disciplined portfolio development and carbon price exposure

	Status of customer discussions	Four MOUs signed for >10 Mtpa volume

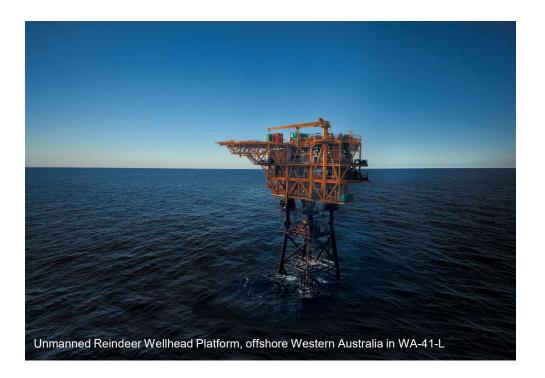

Technical engineering activities 68

2024 Investor Day — Santos

Western Australia CCS

Initial Reindeer CCS project will cater solely to third-party CO2 volumes

Overview	Industrial decarbonisation of adjacent emissions by leveraging the existing infrastructure and depleted reservoirs in Australian waters
Status	Entered FEED in 1H 2024
Timeline	Targeting FID readiness in 2026
First Injection	Targeting 2029
Annual CO2 storage	~5 Mtpa potential including nearby G9 field Initial project will be ~1 Mtpa
CO2 source	Third-party only
Status of customer discussions	Four MOUs signed, including a non-binding commercial agreement with an international customer for CO2 import into Santos' portfolio of CCS projects

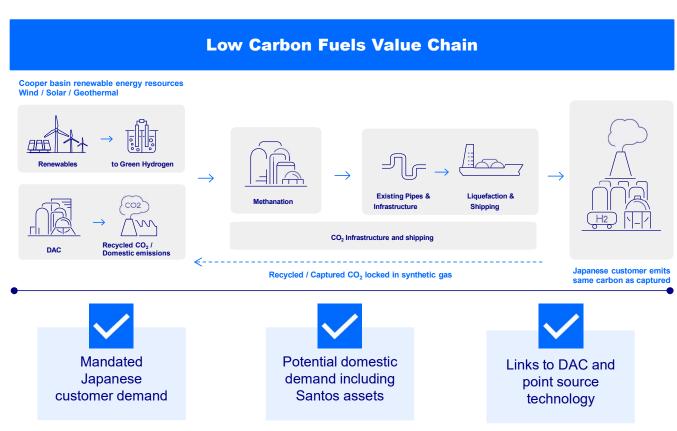

Moomba low carbon fuels project

Developing a low carbon fuel which can be used in existing supply chains to backfill LNG projects over time or for domestic use

Cooper Basin advantages

- Excellent renewable energy resource potential (solar, wind, geothermal)
- Pipeline infrastructure for connection to domestic and export markets
- Strong regulatory regime with support for gas as a fundamental part of the energy transition

Carbon third-party storage growth target

Gross storage target ~14 Mtpa, equivalent to 50 per cent of Santos' 2023 estimated downstream equity Scope 3 emissions¹

By 2040 Store ~14 Mtpa third-party CO2e² Longer term aspiration Store more carbon than our Scope 1, 2 and 3 emissions

(7

2025 Strategic priorities

Focused on driving shareholder returns by delivering our low-cost operating model and executing on major projects

Deliver safe, reliable and low-cost production from base business

Deliver first LNG from Barossa project

Progress Pikka project for first oil in 2026

Progress PNG LNG and East Coast LNG backfill opportunities

FID Moomba Central Optimisation and Cooper Midstream Optimisation Projects

Secure approvals to support FID readiness for CCS projects

Investment proposition

Rapidly approaching inflection point, cash generative portfolio, driving shareholder returns and positioned for the energy transition

High quality, diversified portfolio

Geographic and product differentiated asset base

Current development projects proximal to existing infrastructure

Targeting production 100-120 mmboe¹

Superior returns for shareholders

Committed to delivering predictable returns through the commodity cycle

Phasing and sequencing capital

Disciplined low-cost operating model

Strong balance sheet

Investment and commitment to decarbonisation

Generating ACCUs

Decarbonising our assets while developing commercial carbon management services

Following implementation of updated capital allocation framework

Santos

Definitions and Abbreviations

Absolute	When used in reference to emissions reduction targets means reduction against the total emissions at the relevant point in time, rather than a relative or comparative amount
ACCU	Australian Carbon Credit Unit. Each ACCU issued represents one tonne of carbon dioxide equivalent (tCO2e)
Barrel (bbl)	The standard unit of measurement for all oil and condensate production: one barrel equals 159 litres or 35 imperial gallons
Carbon capture and storage (CCS)	Carbon Capture and Storage (CCS) is a process in which carbon dioxide (CO2) from industrial and energy- related sources is separated (captured), conditioned, compressed, transported and injected into a geological formation that provides safe and permanent storage deep underground
Community investment	Includes agreements with social outcomes, sponsorships, grants and donations
Critical fuels	Oil and natural gas, being hydrocarbon fuels that supply 80 per cent of the world's primary energy supply1. Hydrocarbon fuels are critical to meet current and forecast energy demand and to the manufacturing of everyday products
Decarbonise	To decarbonise is the process of avoiding, reducing or offsetting anthropogenic greenhouse gas emissions through operational activities or efficiencies, technology deployment and/or use of generated or acquired carbon credit units
Emissions intensity	The amount of greenhouse gas emissions per unit of specified output, such as production or facility throughput
Emissions reduction units	An emissions reduction unit represents one tonne of carbon dioxide equivalent (tCO2e) emissions reduction or removal
Gas	Natural gas
Liquid hydrocarbon (liquids)	A sales product in liquid form for example, condensate and LPG
Low carbon fuels	Fuels that Santos may seek to develop with materially lower net greenhouse gas emissions in their production processing and use (including through reduction and / or equivalent emissions reduction units) compared to traditional fossil fuels. This term may encompass a range of fuels such as hydrogen, ammonia or e-methane
Lower carbon energy	Energy sources that have lower net greenhouse gas emissions in their production, processing and use (including through reduction and / or equivalent emissions reduction units) compared to traditional fossil fuels. This includes lower carbon domestic gas, LNG and hydrocarbon liquids, and may also include low carbon fuels as they are developed by Santos
Net Zero	In relation to greenhouse gas emissions, is achieved when anthropogenic emissions of greenhouse gases are balanced by anthropogenic removal of greenhouse gases through means such as operational activities or efficiencies, technology (e.g, CCS), offset through the use of carbon credit units, or other means

Net-zero Scope 1 and 2	Santos' equity share of net-zero Scope 1 and 2 greenhouse gas emissions
emissions / Net-zero emissions	
Oil	A mixture of liquid hydrocarbons of different molecular weights
Reserves	Those quantities of petroleum anticipated to be commercially recoverable by application of development projects to known accumulations from a given date forward under defined conditions. Reserves must satisfy four criteria: they must be discovered, recoverable, commercial, and remaining (as of a given date) based on the development project(s) applied.
Target	An outcome sought that Santos has identified a pathway, or pathways, toward delivery, subject to conditions and assumptions
CO2	Carbon dioxide
CO2e	Carbon dioxide equivalent, being a measure of greenhouse gases (e.g. carbon dioxide, methane, nitrous oxide) with the equivalent global warming potential as carbon dioxide when measured over a specific time
FEED	Front-end engineering and design
FID	Final investment decision
IEA	International Energy Agency
LNG	Liquified natural gas, being natural gas that has been liquified by refrigeration or pressure to store or transport it
boe	barrels of oil equivalent
mmbbl	million barrels
mmboe	million barrels of oil equivalent
mmBtu	million British thermal units
MtCO2e	million tonnes of carbon dioxide equivalent
Mtpa	million tonnes per annum
Synthetic gas	A drop-in replacement for natural gas that is produced using methanation or other processes to combine hydrogen and carbon dioxide to make methane which can be used in existing supply chains. Synthetic gas production by Santos is in the early planning phase, with aspects such as production technologies and emissions footprints being evaluated as part of the planning process. Based on current knowledge, synthetic gas has the
