

ASX Announcement

3 February 2025

GREEN BOND ISSUANCE UPDATE

Redivium Limited (ASX:RIL, FSE:HR90) (**Redivium** or the **Company**) is pleased to announce the successful completion of all formalities to begin listing of the Company's EUR 25 million (AUD ~40.76 million equivalent)¹ in green debenture bonds by its wholly-owned Irish subsidiary, Redivium Europe Limited (**Green Bond**). This development marks a significant milestone in the Company's strategic expansion and commitment to sustainable battery recycling initiatives in Europe.

KEY HIGHLIGHTS OF THE ISSUANCE

- Amount to be raised:** EUR 25 million.
- Proposed Application of Funds:** The proceeds will be utilised to:
 - Accelerate the development of Redivium's UK battery recycling facility** to deliver ESG-compliant urban mining solutions in Europe.
 - Progress the European project pipeline** targeting new battery recycling initiatives across key markets, initially covering United Kingdom, Czech Republic and Romania.
 - Enhance operational capacity:** Ensuring shorter implementation lead times and increased efficiency for future recycling activities aligned with the circular economy.
- Key Bond Terms:**
 - ISIN:** CH1213604296
 - Issue Date:** 28 February 2025
 - Maturity:** 8 years (2033)
 - Coupon Rate:** 10% per annum, payable semi-annually (first coupon date 28 February 2026)
 - Issue Price:** 100% of face value
 - Minimum Subscription:** EUR 50,000
 - Minimum Listing Cover:** EUR 1,000,000

¹ 1 AUD = 0.60 EUR at the prevailing rate of exchange

- **Guarantee/Collateral:** Secured by a pledge of shares in Redivium Europe Limited.
 - Refer to Appendix A for the Green Bond Product Sheet.
4. **Listing and Exchange:** The green bonds are listed on the Vienna Stock Exchange with an intended secondary listing on the Frankfurt Stock Exchange.

STRATEGIC RATIONALE

This issuance reflects Redivium's commitment to driving the energy transition through sustainable recycling solutions. Its UK plant, central to this strategy, will help to address the UK's and Europe's growing demand for recycled battery materials, supporting regulatory frameworks and green investment objectives.

DISTRIBUTION

Redivium's lead placing agent is Germany's 624 InvestServices AG.

The Company also holds a non-binding Letter of Intent² with its materials product offtaker WMC Energy BV³ for possible subscription of up to €2 million (AUD ~3.2 million equivalent) in the bonds.

Michael O'Leary-Collins, executive director of Redivium, commented:

"We are delighted with support for our inaugural green bond issuance from our various partners. A successful listing of this instrument will aid the Company to take meaningful steps together with its project partners aimed at establishing Redivium as a leading battery materials producer in Europe's battery recycling market while demonstrating our commitment to sustainable development and innovation in urban mining."

The Company will continue to provide updates on project milestones and green bond listing status as part of its ongoing market disclosure obligations.

This ASX announcement has been authorised for release by Mr Michael O'Leary-Collins, Executive Director

² The Letter of Intent is mutually non-binding and is subject to project related due diligence conditions and deliverables required of the Company with no commitment to subscribe. The document is a statement of intentions and is one of a number of possible sources of subscriptions in which the Company is engaged.

³ Refer to ASX announcement dated 20 January 2025 titled "Binding Term Sheet for Offtake".

IMPORTANT NOTICE

This announcement contains forward-looking statements that are based on an assessment of present economic and operating conditions, and on a number of assumptions regarding future events and actions that, as at the date of this announcement, are expected to take place.

Such forward-looking statements are not guarantees of future performance and involve known and unknown risks, uncertainties, assumptions and other important factors, many of which are beyond the control of the Company, the directors and the Company's management.

The Company cannot and does not give any assurance that the results, performance or achievements expressed or implied by the forward-looking statements contained in this announcement will actually occur and investors are cautioned not to place undue reliance on these forward-looking statements.

About Redivium Limited (www.redivium.com)

Redivium aims to provide advanced battery recycling technology across Europe, covering multiple battery chemistries.

The Company also has commercialisation rights to technology developed by Neometals and licensed from ACN 630 589 507 Pty Ltd for the UK and Ireland, Scandinavia, and Italy and South East Europe. This particular technology is co-owned by Neometals Ltd (ASX & AIM: NMT) and German engineering firm SMS Group GmbH.

The Company's existing and developing recycling processes are aimed to safely eliminate lithium-ion battery waste and recover valuable materials including lithium, nickel, copper and anode components for reuse in new battery cell production. With strong EU energy transition regulation supported with EU funding to deliver scalable recycling innovation to underpin the automotive industry's electrification and energy storage, Redivium aims to become a leading European battery recycler and materials producer.

Appendix A

Green Bond Product Sheet

For personal use only

We kindly request you to fill in this sheet carefully and as comprehensively as possible. This sheet aims to capture all necessary information to determine the correct operational set-up of the vehicle.

The content of this Product Sheet is kept generic. As a result, not all eventualities might be covered and / or might not be applicable for the respective vehicle under incorporation. To that end you will find a free format box at the bottom of this form where additional information can be logged.

Type of underlying	Loan: please answer questions under a)
Project	<p>Redivium is establishing a 10-tonne-per-day battery recycling facility at an industrial site in Chester, NW England. This facility will play a crucial role in reducing hazardous waste through responsible shredding of batteries and recovering valuable materials, contributing to the circular economy. The project is part of the company's broader strategy to become a leading sustainable battery recycler and supplier of battery materials in Europe. The first project will serve as a benchmark for Redivium's future projects across Europe, with funds allocated to build the UK facility and support expansion into Romania, the Czech Republic, and black mass trading operations. With access to advanced recycling technology from Neometals Ltd and SMS Group GmbH, Redivium is positioned to meet growing demand in the European battery recycling market, supported by strong regulatory frameworks and innovation incentives.</p> <p><i>Detailed description of the risks in accordance with the SDGs of the "Green Project":</i></p> <p>SDG 8: Decent Work and Economic Growth Risk: Labor Shortages and Skill Gaps</p> <p>The specialised nature of battery recycling requires a workforce with specific technical skills, which could lead to labour shortages or increased hiring costs.</p> <p>Mitigation: Invest in training and education programs to develop the necessary skills within the local workforce, and create partnerships with vocational schools or universities.</p> <p>SDG 11: Sustainable Cities and Communities Risk: Opposition from Local Communities</p> <p>Local communities may resist the construction of a plant due to concerns about pollution, noise, or traffic.</p> <p>Mitigation: Engage with the local community early in the planning process, ensure transparency about the facility's environmental safeguards, and demonstrate the long-term benefits (e.g., job creation and environmental protection) to gain public support.</p>
Sustainable Development Goals	<input type="checkbox"/> Renewable energy <input type="checkbox"/> Clean transportation <input type="checkbox"/> Building efficiency <input type="checkbox"/> Land use & marine resources <input checked="" type="checkbox"/> Waste and pollution control

Risks:

Risk:

EV batteries have a longer life than originally estimated which means they won't be available for recycling

Mitigation: Redivium anticipated this two years ago and adapted its business plan to focus on portable batteries covering electronics, closed space electric vehicles, consumer mobility etc representing over 60% of the available feedstock producers have a responsibility to collect through various compliance schemes in each of the EU countries. Redivium is focussed on developing black mass production capacity across the EU in partnership with these compliance schemes. The objective is to profitably construct and operate plants in partnership with compliance schemes with binding feedstock commitments for which Redivium will have binding production offtake agreements. The European lithium-ion battery recycling market size was US\$456.2m and is predicted to grow with a CAGR of 19.3% generating revenue of US\$3,015.5m by 2031 (<https://www.researchdive.com/8649/europe-lithium-ion-battery-recycling-market>)

Risk:

Higher value cathode rich NMC chemistries being replaced by low value LFP chemistry

Mitigation: The dominant chemistries being lithium-manganese oxide (LMO), lithium-nickel-cobalt-aluminium oxide (NCA), lithium-nickel-manganese-cobalt (NMC), lithium-cobalt oxide LCO account for more than 75% of the battery market with the balance, in 2021, being lithium-ion phosphate (LFP) and growing. Redivium is the commercial partner of an EU funded project developed by Greece's Sunlight gigafactory to profitably process LFP production waste and battery scrap. Once operationally validated in Sunlight's, Redivium has the commercialisation responsibility for the technology. As Redivium is also aware of other developing technologies, the company will review over time to ensure the best in class solution is deployed.

15. Additional Information**Risk:****Permitting regimes inconsistent across the EU with no fixed time limit**

Mitigation: On 23 May 2024, the European Union Critical Raw Materials Act ("CRMA") became law. The CRMA was first proposed in March 2023, together with the Net-Zero Industry Act to ensure access to a sustainable and competitive critical raw materials value chain in Europe. To incentivize domestic production, the CRMA introduces the concept of Strategic Projects ("SPs"). Following an application of a project promoter, the European Commission, may recognize the status of SP to raw materials projects both in the EU and in third countries, taking into account the opinion of a newly established Board. Once categorized as such, SPs will benefit from a fast-track permitting process. The CRMA sets maximum timelines for the permitting process – 27 months for extraction projects and 15 months for processing and recycling projects. Each Member State is mandated to designate single contact points, referred to as "relevant administrative units", to facilitate the project permitting process
