RENERGEN BEGINS COMMERCIAL LIQUID HELIUM SALES

The long-awaited event of filling a helium container with liquid has now taken place, an achievement the Company is pleased to announce. It is being collected by the customer today.

After facing challenges cooling large iso-containers to the extreme temperatures needed for liquid helium storage (-269 degrees Celsius), we've implemented an effective alternate solution. We will now regularly fill smaller Dewars (250-500 litres) with liquid helium. This practical approach will continue until our plant reaches closer to nameplate capacity.

Our team began cooling the vessel on the 13th of March at 9:00 AM and completed the fill in the mid-afternoon.

The quality of both our LNG and liquid helium now exceeds minimum design specifications. We remain committed to increasing production and developing the Virginia Gas Project to its full potential.

"This achievement represents a concrete step toward rebuilding the trust placed in us — a commitment we take seriously. Our operations team has poured their hearts and souls into overcoming these technical challenges," said CEO Stefano Marani. "Successfully managing cryogenic liquid at -269 degrees Celsius is a remarkable accomplishment achieved by very few companies worldwide. We remain committed to restoring confidence through consistent delivery and performance as we continue to advance the Virginia Gas Project."
