THE WORLD'S AVAILABLE FRESHWATER RESOURCES

- Demand exceeds supply
- Growing water stress
- Food security pressures

The solution to addressing global water scarcity and food security lies in addressing the inefficiencies of manually operated canal systems.

Farms in the USA supplied by manually operated gravity-fed canals use 75% more water per acre than those with ondemand supply.

Automating these networks enables ondemand supply with minimal losses. URBAN CONSUMPTION IRRIGATED CROP CONSUMPTION ~1/3

FROM SMART DEVICES TO INTEGRATED SYSTEM-WIDE TRANSFORMATION

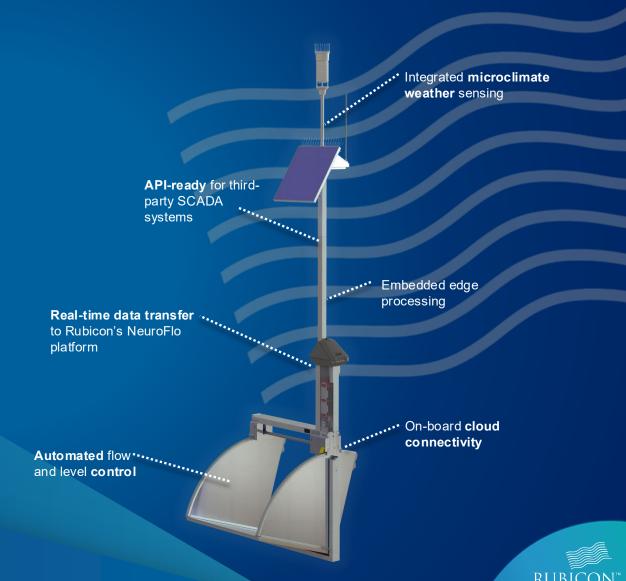

Each Rubicon gate has the compatibility to integrate into a broader autonomous network solution (TCC).

Rubicon's integrated gates and flow meters deliver unique value by introducing real-time visibility, data, and network connectivity.

Each installation builds capability over time, placing clients on a **modernisation journey**, progressing from centuries-old manual systems to real-time operation, connectivity and operational transformation.

Additionally, devices support integration with thirdparty systems, enabling seamless management of water entitlement, compliance, monitoring, invoicing, and more.

This creates the foundation for long-term partnerships and increasing value for our customers.

MURRUMBIDGEE IRRIGATION – AUTOMATION COMPLETE

In November 2024, Murrumbidgee Irrigation (MI) announced the completion of its decade-long automation program

1,700KM+ channels

servicing over 190,000 hectares of irrigated land in the Murrumbidgee Irrigation Area (MIA), poviding water to support high-value crop production.

2,300 irrigators

connected by the automated network with water orders submitted via MIConnect, an enterprise version of Rubicon's NeuroFlo software suite.

"A big win for the region. It means more water going back to the environment, better delivery for farmers, and local jobs along the way."

- Rose Jackson, NSW Minister for Water

1,200+ automated regulators

providing real-time at almost every point in the network is redefining what's possible in open channel management.

90%+ efficiency

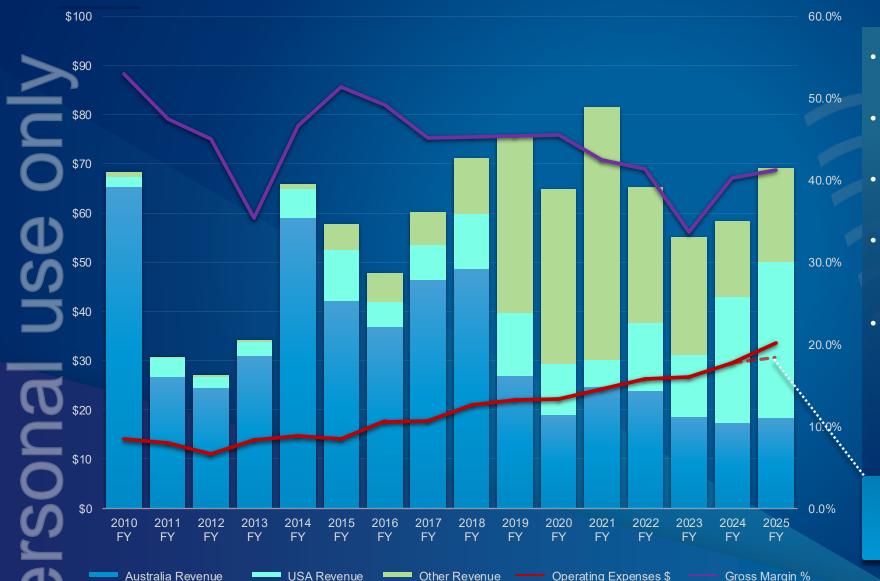

reported consistently by MI, improving from a baseline of around 70%. Leaving losses primarily to evaporation and minor unaccounted volumes.

"We probably only know 10–20% of what we'll get out of this system... we don't know what opportunities will come. Even nine years on, with full automation and all the results we've achieved, there's still so much more we can do."

- Brett Jones, CEO Murrumbidgee Irrigation
