First OncoSil™ treatment in Germany

Sydney, Australia – 16 October 2025: Pancreatic cancer treatment device company **OncoSil Medical Limited (ASX:OSL)** (“OncoSil” or “the Company”) is pleased to announce the first patient treatment in Germany using the OncoSil™ device.

The successful treatment was performed on 15 October 2025 at Universitätsklinikum Augsburg, a leading university hospital renowned for its excellence in oncology. This important milestone marks the commencement of OncoSil’s commercial activities in Germany, the largest and most influential healthcare market in Europe.

Germany represents a key strategic market for OncoSil Medical, given its advanced healthcare infrastructure, strong clinical expertise in oncology, and early adoption of innovative medical technologies. The Company will continue to collaborate closely with German physicians, healthcare institutions and health insurers to facilitate broader patient access to the OncoSil™ device.

Nigel Lange, CEO & Managing Director of OncoSil Medical, said:

"We are very proud to announce the first OncoSil™ treatment in Germany, a major milestone for the Company. This represents our initial commercial entry into the German market, which is one of Europe’s most important and sophisticated medical device markets.

From a broader European perspective, this initial OncoSil™ treatment in Germany is further evidence that our targeted penetration of key countries across the Continent is being delivered.

We now look forward to working with leading German physicians to bring our innovative treatment to more pancreatic cancer patients over the months and years ahead."

About OncoSil Medical

OncoSil Medical (ASX:OSL) is a global medical device company focused on Interventional Oncology. OncoSil Medical's mission is to improve the outcomes for people living with cancer by utilizing the selected and targeted intratumoural placement of Phosphorous-32 (32P) Microparticles in addition to chemotherapy.

OncoSil Medical has developed OncoSil™ device for the treatment of unresectable locally advanced pancreatic cancer. Its targeted approach enables healthcare professionals to deliver a greater radiation dose directly into the tumour compared to external beam radiotherapy, while sparing surrounding critical organs.

Pancreatic cancer is the 12th most common cancer in men and the 11th most common cancer in women across the globe, with 500,000 new cases detected every year¹. Since pancreatic cancer is generally diagnosed at a later stage, it has a poor prognosis for long-term survival.

OncoSil™ has received CE Marking approval, providing marketing authorisation in both the EU and the UK. OncoSil™ is designated as a breakthrough device in both Europe and the United States. It is currently approved for sale in 30+ countries including European Union, United Kingdom, Turkey and Israel, with commercial treatments using the device already undertaken in Spain, Italy, Austria, Greece, Turkey, and Israel.
