Key Risks

There are a number of factors, specific to an investment in BrainChip, specific to the Material Contract and of a general nature, which may affect the future operating and financial performance of BrainChip and the industry in which it operates and the outcome of an investment in BrainChip. This section describes certain key risks associated with an investment in BrainChip which potential investors should consider together with publicly available information (including this Presentation) concerning BrainChip before making an investment decision.

SPECIFIC INVESTMENT RISKS

Risk of delays in product development and introduction

There is a risk that delays in BrainChip's product development of advanced products including delays arising from internal development, development by partners and integration of the technology by third party providers of intellectual property may materially impact the financial performance of the business. There is also a risk of delays in new product introduction as the Company commercialises its advanced products.

Risk of delays in sales and marketing

There is a risk that delays in sales and marketing of BrainChip's products may arise from the inability to recruit and retain highly skilled and experienced sales and marketing human resources.

Risk of delays in customer adoption

There is a risk that delays in customer adoption of BrainChip's products may arise due to inadequate training, education, application engineering and customer support.

Funding

A loss of, inability to raise further funding, or adverse impact on or in relation to, one or more of BrainChip's funding sources could limit BrainChip's ability to fund the continued development and commercialisation of the AkidaTM Chip. This could have an adverse effect on BrainChip's ability to successfully execute its core business strategy.

Protection of ownership of technology and intellectual property

BrainChip relies on laws relating to trade secrets, copyright and trademarks to assist in protecting its proprietary rights. However, there is a risk that unauthorised use or copying of BrainChip's software, data or specialised technology will occur. In addition, there is a risk that the validity, ownership or authorised use of intellectual property relevant to BrainChip's business may be successfully challenged by third parties. This could involve significant expense and potentially the inability to use the intellectual property in question.

Breach of information technology and trade secrets

There is a risk that the intellectual property held as trade secrets could be compromised by outside parties, or by an employee of BrainChip or that an information technology breach may result in litigation, and potential liability.

Key Risks (cont'd)

Reputational damage

Issues of a varying nature may arise that would give rise to reputational risk and cause harm to BrainChip's business dealings and prospects. Failure to address these potential issues appropriately could give rise to additional legal risk, subject entities within the Group to regulatory actions, fines and penalties, or harm the reputation of BrainChip or the Group among its shareholders, customers and investors. Further, any resulting loss of confidence may cause damage to reputation and brand. This may adversely impact the future growth and profitability of BrainChip.

BrainChip's

Customer and supply contracts

There is a risk that the loss or discontinuation of certain customer or supply contracts would have a material impact on the Company's cash flow and ability to execute its core business objectives.

BrainChip's technology may be superseded by other technology or changes in business practice

BrainChip's success will in part depend on its ability to offer solutions that remain current with the continuing changes in technology, evolving industry standards and changing consumer preferences. There is a risk that BrainChip will not be successful in addressing these developments in a timely manner, or that expenses will be greater than expected. In addition, there is a risk that new products or technologies (or alternative systems) developed by third parties will supersede BrainChip's technology.

GENERAL INVESTMENT RISKS

General economic and financial market conditions

General economic conditions (both domestic and international), long-term inflation rates, exchange rate movements, interest rate movements and movements in the general market for ASX and internationally listed securities, changes in domestic or international fiscal, monetary, regulatory and other government policies, changes in investor sentiment and perceptions, geo-political conditions such as acts or threats of terrorism, military conflicts or international hostilities may have a significant impact on the performance of the Company.

Market risk

Market risk is the risk of an adverse event in the financial markets that may result in a negative impact on the performance of the Company.

Litigation, claims and disputes

Issues of a varying nature may arise that would give rise to reputational risk and cause harm to BrainChip's business dealings and prospects. Failure to address these potential issues appropriately could give rise to additional legal risk, subject entities within the Group to regulatory actions, fines and penalties, or harm the reputation of BrainChip or the Group among its shareholders, customers and investors.

Key Risks (cont'd)

Risk of shareholder dilution

In the future, BrainChip may elect to issue new Shares in connection with future fundraising. While BrainChip will be subject to the constraints of the ASX Listing Rules regarding the percentage of its capital it is able to issue within a rolling 12-month period (other than where certain exceptions apply), there is a risk that the future issue of additional equity could result in dilution for Shareholders.

Liquidity

The Group's Shares are only listed on the ASX and will not be listed for trading on any other securities exchanges. There can be no guarantee that an active market in the Shares will develop or continue. If an active market for the Shares does not develop or is not sustained, it may be difficult for investors to sell their Shares at the time or for the price they seek. Further, the market price for Shares may fall or be made more volatile because of the relatively low volume of trading in the Company's securities. When trading volume is low, significant price movements can be caused by the trading in a relatively small number of shares. Sales of a substantial number of Shares following the Offer, either by the principals (once escrow ends) or by new Shareholders, or the perception or expectation that such sales may occur, could cause the market price of the Shares to decline. The Company may also offer additional Shares in subsequent offerings, which may adversely affect the market price for the Shares.

Employee recruitment risk and retention

There is a risk that BrainChip may not be able to attract and retain key staff or be able to find effective replacements in a timely manner. The loss of staff, or any delay in staff replacement, could impact BrainChip's ability to operate its business and adequately manage risk and compliance issues.

Taxation

Future changes in taxation law, including changes in interpretation or application of the law by the courts or taxation authorities, may affect taxation treatment of an investment in BrainChip shares or the holding and disposal of those shares. Further, changes in tax law, or changes in the way tax law is expected to be interpreted, in the various jurisdictions in which BrainChip operates, may impact the future tax liabilities and performance of BrainChip. Any changes to the current rates of income tax apply to individuals and trusts will similarly impact on shareholder returns.

Unforeseen risk

There may be other risks of which the Directors are unaware at the time of this presentation which may impact BrainChip, its operations and/or the valuation and performance of Shares.

No cooling off

Cooling off rights do not apply to the acquisition of New Shares.
