

**ASX Announcement**

**ASX Code: OKR**

9 April 2018

## **FAVOURABLE MINERALISED STRUCTURES DEFINED AT MAMBASA**

### **Highlights**

- Phase 1 Soil Sampling program completed at the Mambasa Gold Project.
- Results from the 997 soil samples were processed at ALS Johannesburg.
- Encouraging results received of up to **0.93 g/t Au** returned from soil sampling.
- Anomalous gold results at Mambasa have outlined a NW trend, which is the same regional trend that hosts large-scale gold deposits within the area such as AngloGold Ashanti's Geita Gold Mine<sup>1</sup> (20Moz) mine in Tanzania and Loncor Resources Inc's<sup>2</sup> recently defined Makapela Gold Project (1Moz) and Kilo Gold's<sup>3</sup> Adumbi (1.3Moz).
- Plans for a follow-up Phase 2 sampling program is currently being planned for the June Quarter and may include some scout diamond drilling

Mr. Ferguson, Executive Director, commented: “We are pleased to report the recent soil sample results from the Mambasa project and are encouraged by the identification of the mineralised north-west regional trend that is a geological backdrop for such regional deposits as AngloGold Ashanti’s Geita Mine and Randgolds Kibali Mine. We are currently gaining a better understanding the minor element association. The follow up work is in the planning stage and will seek to ground truth anomalous results, with a view of working up some drill targets for the June or September quarter.”

**Okapi Resources Limited** (ASX:“OKR”) (“**Okapi**” & “**Company**”) is pleased to announce that encouraging soil sampling results have been returned from the initial Phase 1 exploration program completed during the March 2018 quarter.

The Mambasa Project, consisting of Licences PE364 and PE480 is located in the Democratic Republic of Congo (“DRC”). Location map shown in Figure 1.

The program consisted of the collection of 997 soil samples from the PE364 licence area on a 250m line by 100m soil sample grid. These samples were submitted to the ALS Laboratory, Johannesburg (ISO 9001:2008) for multi-element analysis. The results of up to a maximum of 0.93 g/t Au have been received and are all shown in Table 2.

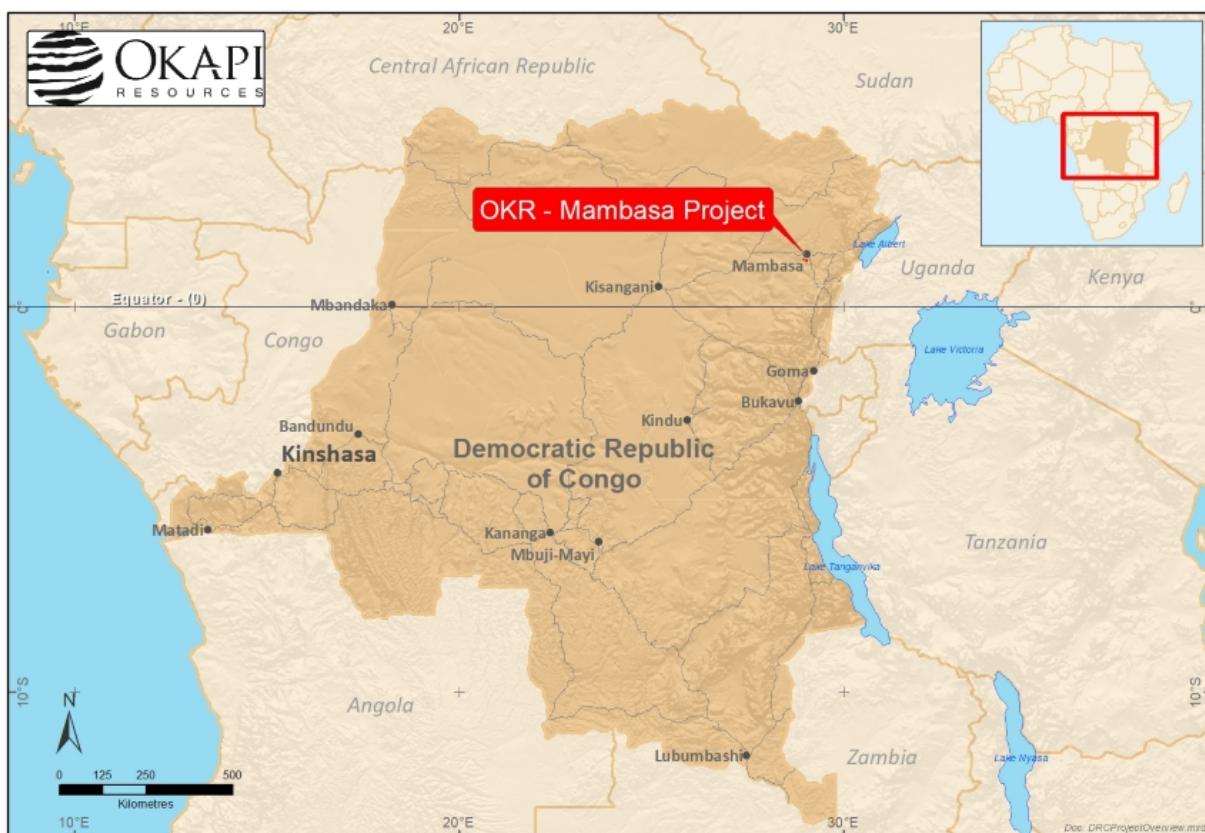

Figure 1. Location of the Mambasa Gold Project

Anomalous gold results show a +3km NW trend which is very encouraging as it is a similar geometry shown by some of the more significant gold projects in the region, including Kibali and Geita. A similar NW fabric can be seen in satellite imagery and the lineation is currently interpreted as the same structural trend that hosts deposits in the Ngayu Greenstone Belt. Refer to Figure 2 and 3.

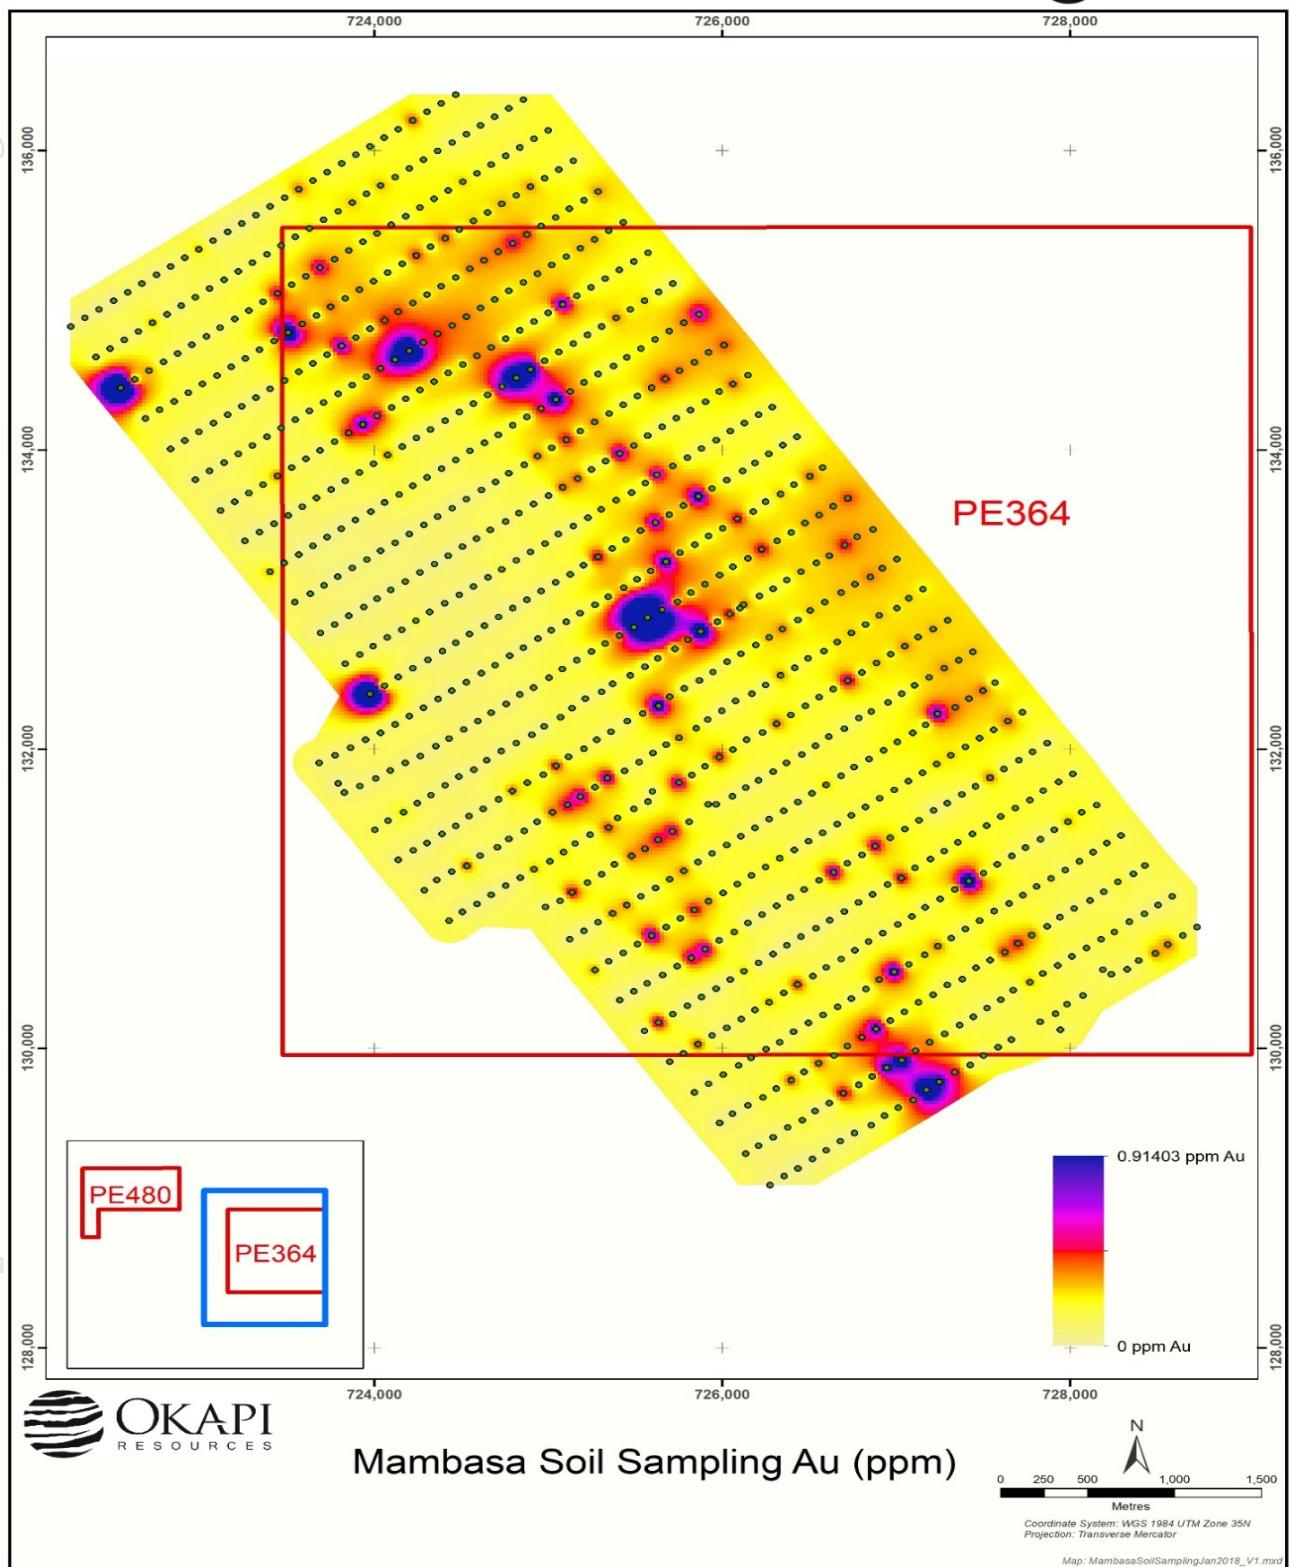

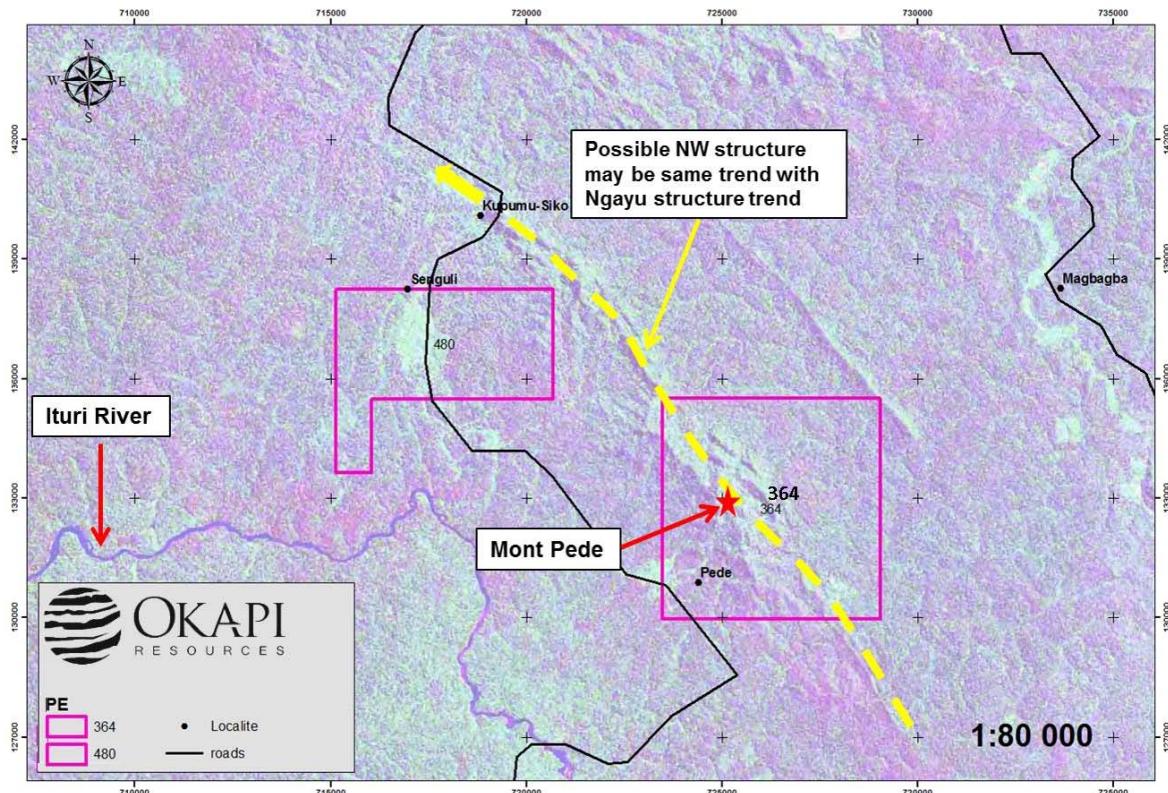

Figure 2: Mambasa Soil Sampling Gold Results (ppm gold)

### MAMBASA LANDSAT MAP

*Figure 3: Landsat Imagery of the Mambasa Project Area*

Also apparent in the gold in soil results is a +3 km long North-South trend that potentially represents another structural control associated with anomalous gold-in-soils results. Figure 2 above.

Further work is in planning which will seek to better understand the results of the soil sampling on the PE364 licence. This will include;

- Further detailed infill soil geochemistry
- Review of multi-element associations
- Detailed ground mapping around anomalous results
- Possible costeaming
- Scout Drilling

An initial exploration program on the licence PE480 is also in planning.

Okapi continues technical due diligence on the Katanga Cobalt/Copper Projects as well as continuing to review additional project opportunities.

## About Okapi Resources

Okapi Resources Limited is a new minerals exploration company focused on the discovery and commercialisation of mineral deposits in the Democratic Republic of the Congo (DRC) and Western Australia.

Okapi's primary objective is to discover and develop mineral resources from its current portfolio. The Company has carefully selected projects with historical workings and excellent results. Okapi has a team of professionals with an exemplary record of success and with a particular history in Western Australia and the Democratic Republic of Congo (DRC).

Okapi is also pursuing a growth strategy that aims to appraise and secure further exploration and development opportunities within gold and mineral endowed districts.

## Background - Mambasa Gold Project

The Mambasa Gold Project is a brownfields project with several historical colonial gold workings, with existing artisanal gold activities across a strike length greater than 600 metres and up to 25 metres in depth. The Mambasa Gold Project consists of two granted licences, PE364 and PE480, located approximately 18km to the south of the town of Mambasa, in the Mambasa District of Ituri Province in the north-eastern DRC.

The Company executed the Mambasa Joint Venture Agreement with Kalubamba SARL and Medidoc FZE which granted the right to earn a 70% interest in the Mambasa Project and to act as the manager. The Mambasa Joint Venture Agreement provides for an exploration expenditure earn-in by the Company over an approximately 4-year period, with a minimum spend of US\$150,000 on exploration work (Phase 1 Assessment) within 12 months of the ASX listing date and before it has the right to withdraw from the joint venture.

The Mambasa Project is located in a region of well documented gold production and has impressive potential within favourable stratigraphic and structural settings that are similar to other large-scale gold deposits within the region including AngloGold Ashanti's Geita (20Moz) mine in Tanzania and Loncor Resources Inc's recently defined Makapela (1Moz) and Kilo Gold's Adumbi (1.3Moz) gold projects.

*The information in this report that relates to Exploration Results for the Mambasa Gold Project is based on, and fairly represents information and supporting documentation compiled by Mr. Michael Montgomery, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy. Mr. Montgomery is a consultant of Okapi Resources Limited. Mr. Montgomery has sufficient experience that is relevant to the style of mineralisation and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resource and Ore Reserves". Mr. Montgomery consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.*

**JORC Code, 2012 Edition – Table 1**  
**Mambasa PE364 & PE480 – Checklist of Assessment and Reporting Criteria**

**Section 1 Sampling Techniques and Data**

Criteria	Explanation
Sampling Techniques	<p>As part of the program total of 997 samples were analysed by ALS Laboratories, Johannesburg (ISO 9001:2008). Of these samples 27 control samples were analysed, with no issues described by these control samples.</p> <p>Sample locations were assigned along a regular grid measured from a reference point defined by handheld GPS. The samples were taken a consistent depth in the soil profile, ~30 to 40cms. Samples were bagged and sample numbers assigned. Sample maps were created and stakes with sample numbers placed on the sample point. Samples were air dried and then sieved to 75 microns with 100 grams being sent for multi-element analyses.</p> <p>Samples are purely to define anomalous elemental values in soils to assist orientate future work programs. The samples were not collected for resource estimations.</p>
Drilling Techniques	Not applicable at this stage as no drilling has been undertaken as yet.
Drill Sample Recovery	Not applicable at this stage as no drilling has been undertaken as yet.
Logging	A cursory log of the nature of the soils were kept.
Sub-sampling techniques and sample preparation	<p>Approximately 1 to 2kg of soil material was excavated by shovel. The soil spoils were sampled at a regular depth of around 30 to 40cms below the surface. The entire sample collected was placed in calico bags, labelled and returned to camp for air drying. Dried samples were sieved to 75 microns and the sample reduced to 100 grams for analyses. These are reconnaissance exploration samples merely testing the potential of the geology.</p> <p>It is not known if they are representative of the material sampled</p> <p>The samples will not be used for resource estimations.</p> <p>No core has been collected.</p>
Quality of assay data and laboratory tests	<p>The assays were carried out by ALS Laboratories, Johannesburg a certified analytical laboratory.</p> <p>All soil samples were subject to multi-element analysis by ICP methodologies. Au was determined by fire assay with an ICP finish.</p>
Verification of sampling and assaying	A total of 27 control samples were analysed, these samples and these consisted of field duplicates and CRMs. No issues were identified in QC sampling.
Location of data points	<p>The sample positions were gridded from a reference point established by a hand-held GPS accurate to 5m in this part of the tropics.</p> <p>Using WGS84 datum, UTM Zone 35N.</p> <p>More precise topographic control is not warranted at this stage of reconnaissance exploration.</p>
Data spacing and distribution	Sample grid was 250 metres by 100 metres and the dimensions are considered appropriate for this stage of exploration. Program is reconnaissance in nature and resources are not being estimated.
Orientation of data in relation to Geological structure	The sample grid was orientated in a north easterly direction so as to be perpendicular the regional structural fabric. Survey was of a reconnaissance nature and target size is not yet determined. Resources are not being estimated.
Sample security	Not applicable at this initial phase of exploration. It is of reconnaissance nature and target size is not yet defined. Resources are not being estimated.
Audits or reviews	No sampling techniques or data have been independently audited.

## Section 2 Reporting of Exploration Results

Criteria	Explanation
Mineral tenement and land tenure status	The “ <i>Permis d’Exploitation No’s PE364 &amp; 480</i> ” (PE364 & PE480) is 100% owned by Kalubamba SARL, address. The licences were granted 20/08/2008 and is valid until 19/08/2023. The licences are 56 blocks in size (about 38 km <sup>2</sup> ) and the permission to explore for gold. OKR has the right to earn a 70% equity interest in the Mambasa project licences.  There are no known historical or environmentally sensitive areas.
Exploration done by other parties	This is a “Green-fields” Exploration project. There has been no exploration done by other parties.
Geology	In the northeast DRC, the greenstone belts are referred to as the Kibalian (Supergroup) of Archaean age. Greenstones are comprised of metavolcanics and some metasediments. Granitoids form a significant part of the Precambrian rocks in north-eastern DRC.  Some Upper Kibalian sediments have been identified with some andesitic volcanics, resting upon a Lower Kibalian volcanic granitoid association in DRC. The metavolcanics of the Lower Kibalian have been subdivided into ultramafic, mafic, intermediate and andesitic. The sediments of the upper Kibalian are pelites and banded iron formations. The Lower Kibalian is intruded by 2.81 Ga old tonalites, whereas the Upper Kibalian is intruded by 2.46 Ga old granodiorites and granites that represent most of the volume of the belt.
Drill hole information	Not applicable at this stage as no drilling has been undertaken as yet.
Data aggregation methods	Not applicable because no aggregation has been completed at this early stage of reconnaissance exploration.
Relationship between mineralization widths and intercept lengths	Not applicable at this early stage of reconnaissance exploration.
Diagrams	As included.
Balanced reporting	Due to the nature of the samples; being soil samples, they are to be considered tools for future work programs.
Other substantive exploration data	Not applicable, this being a green-fields exploration project with no other work having been carried out before.
Further work	Further work will include detailed geological mapping and outcrop rock chip sampling cross strike at 500m spacing to identify specific target lithologies. Areas of poor outcrop will be tested by grid-based soil geochemistry. Subsequent target areas will be trenched and pitted and then drilling of the higher priority targets will be carried out. Scout diamond drilling may be undertaken.  The diagrams presented in the body text of this release show the potential target areas.
